## Body Parts

# Company profile

As one of the prominent leader in Original Equipment automotive parts manufacturing, AISIN is over 94,798 employees strong in 192 associated global subsidiaries, and is the 5th ranked in the world as OEM Automotive Parts Suppliers.

Based on the philosophy of "Quality First," the Aisin Group offers a wide lineup of products covering almost every automobile-related field, including drivetrain, body, brake & chassis, engine and information related products. The Group's strength lies in its unparalleled, comprehensive technological capabilities, which combine its broad product lineup with development and production capabilities. The Aisin Group works to transcend the boundaries of product fields with a fresh perspective toward building high added value products that customers enjoy for their safety, performance, design and confort.

The Aisin group is part of the Toyota group, and is composed by six core companies.

**AISIN**

Aisin Seiki Co., Ltd

**AT**

Aisin Takaoka Co., Ltd.

**AC**

Aisin Chemical Co., Ltd.

**AW**

Aisin AW Co., Ltd

**AI-A**

Aisin AI Co., Ltd.

**ADVICS**

ADVICS Co., Ltd

**Aisin Europe Aftermarket** division based in Belgium is selling and distributing from their central warehouse car parts and related products in Europe, Africa, and Eastern countries.

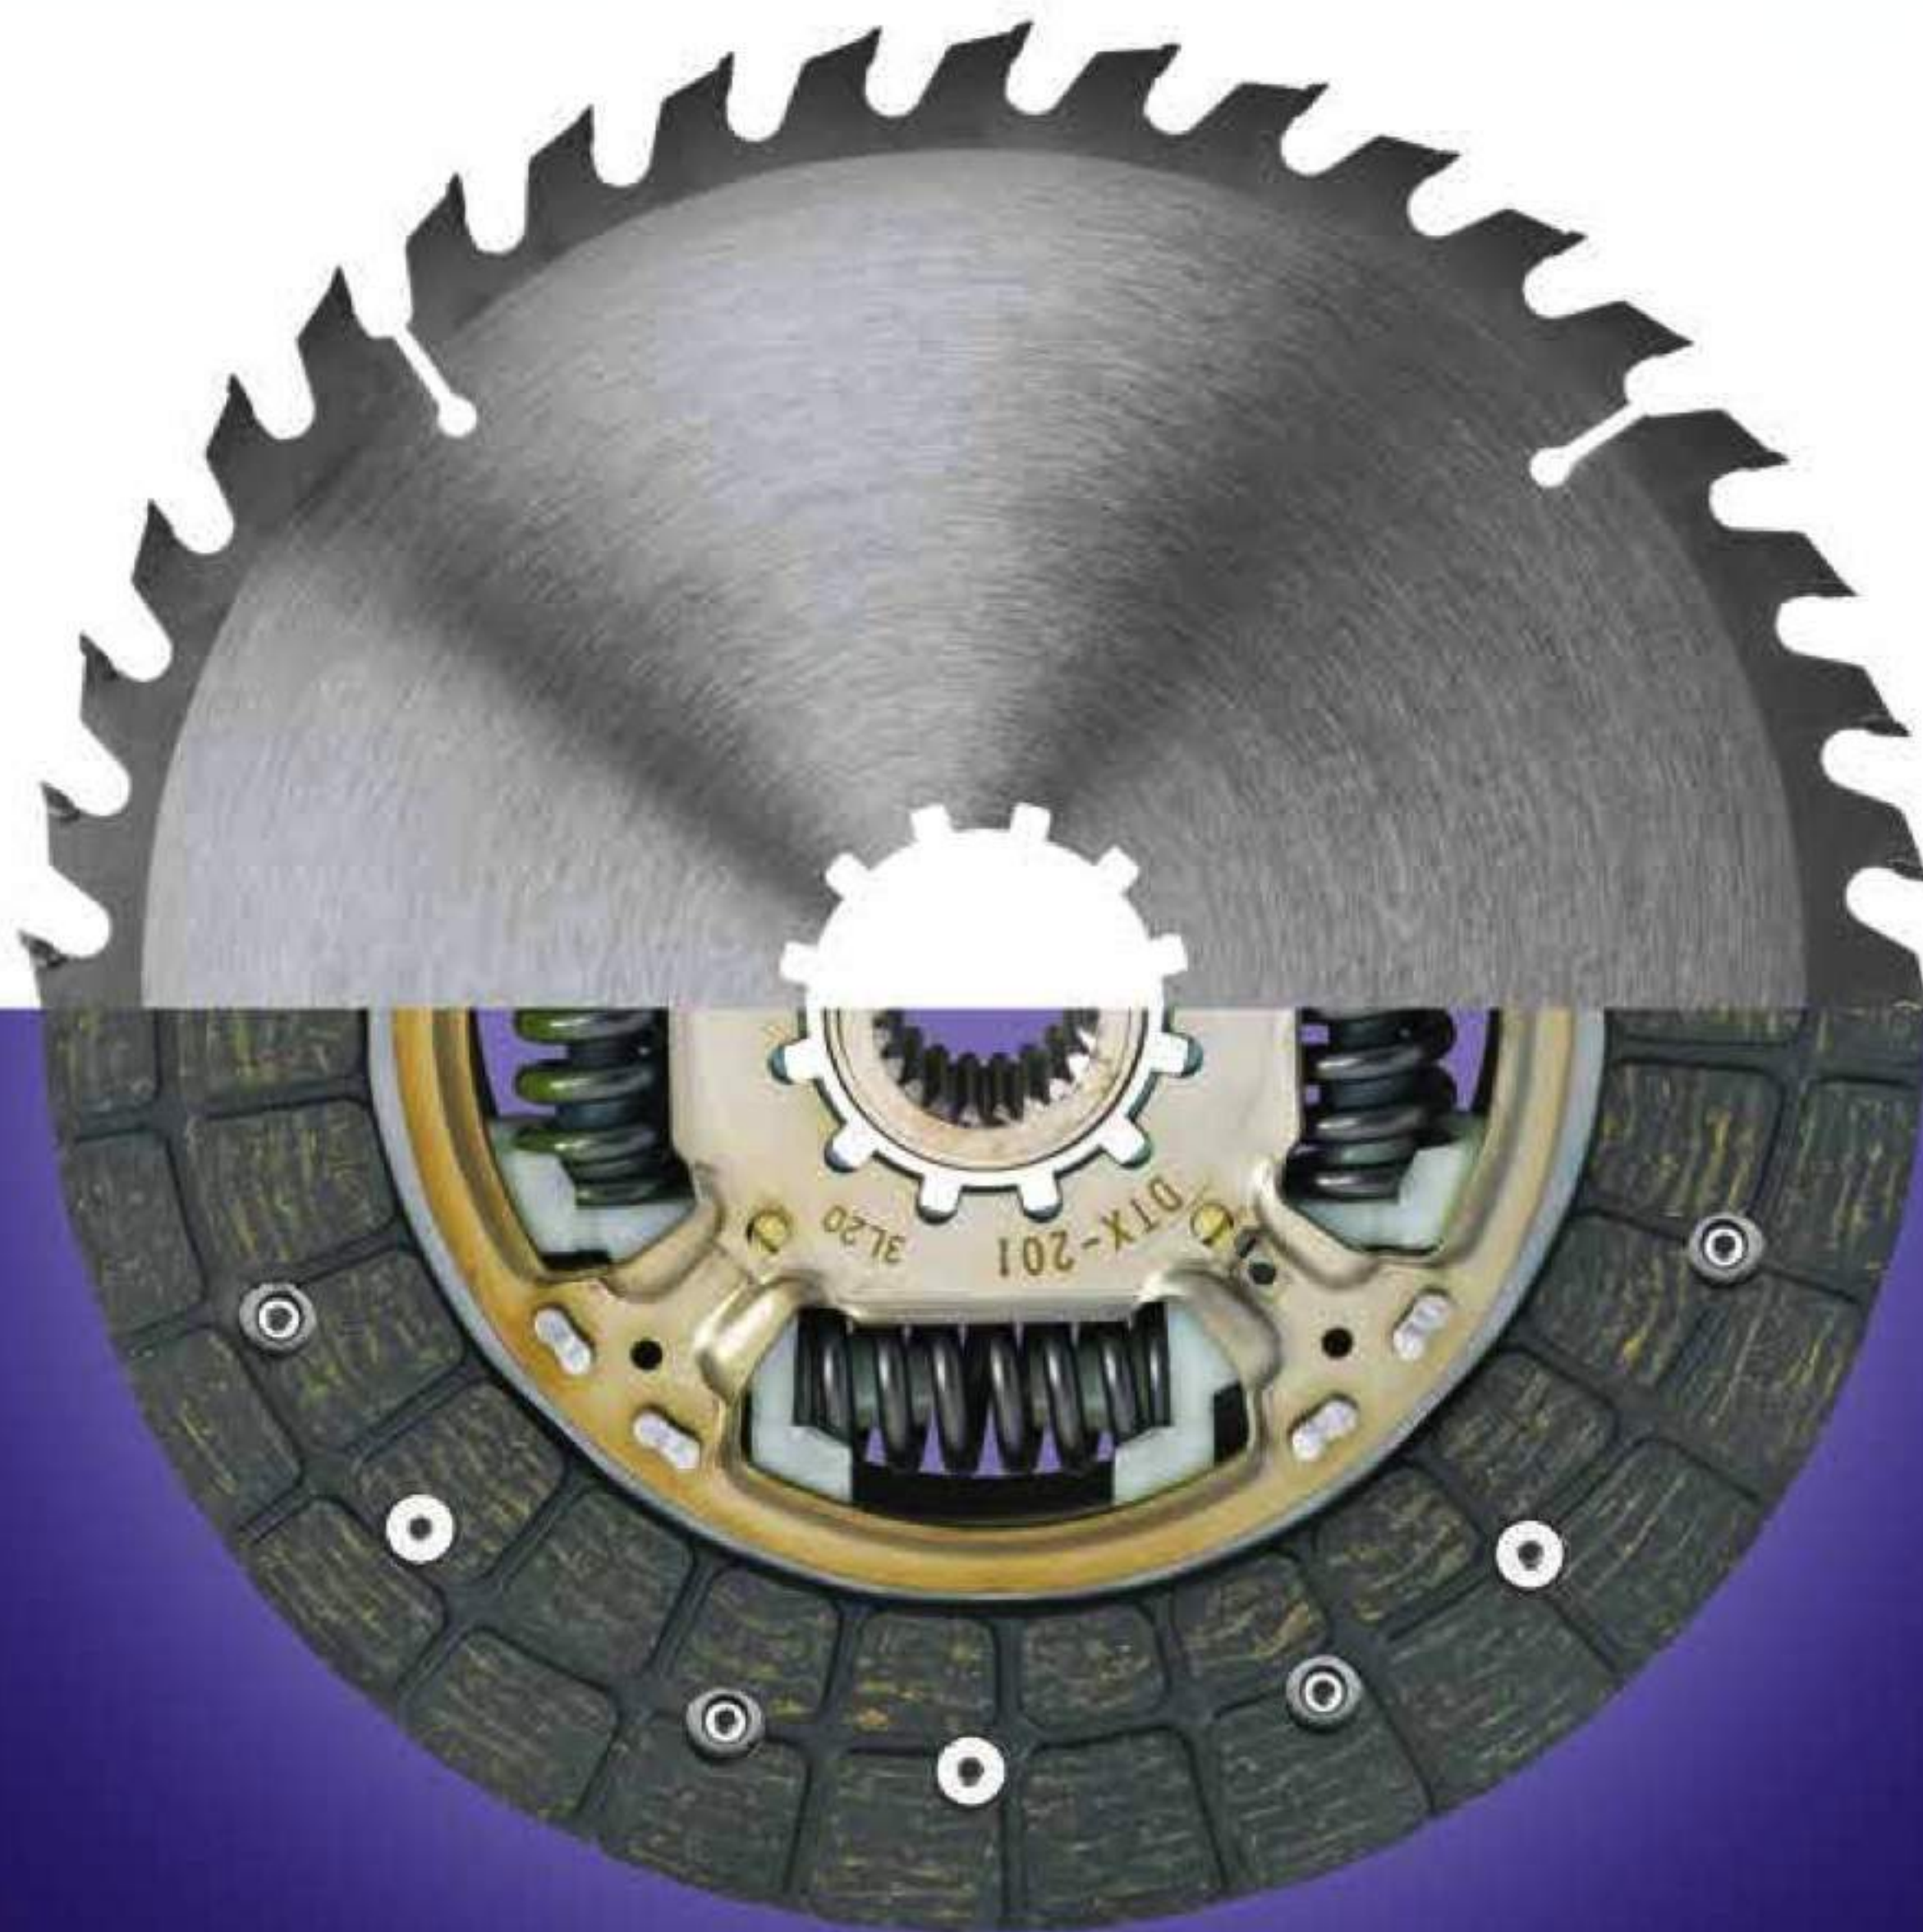

## Brand Protection

Aisin has been actively involved in preventing the manufacturing and sales of counterfeit products. In addition to our own efforts, AISIN is also participating with the "NO Counterfeit Parts" movement in conjunction with the Japan Auto Parts Industries Association (JAPIA). Our goal is to eliminate counterfeit parts through individual and organized group efforts.

### Don't produce! Don't Sell! Don't Buy!

Japan Auto Parts Industries Association (JAPIA) is providing a series of posters as part of the "No Counterfeit Parts" movement. To provide international awareness of illegal activities, posters are available in several key languages: English, French, Spanish, Chinese, and Arabic. Please contact your local sales representative to receive posters and additional information.

## Electric water pump WPT-190A - WPT-191A

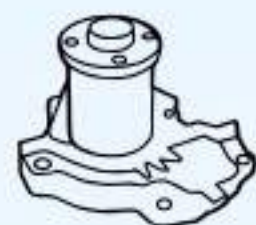

- 
- A detailed, close-up photograph of a car engine, showing various mechanical parts like the timing belt cover and other engine components. The image is in a dark, moody style with blue and grey tones.
- Ideal for Mild and Full Hybrid
  - Low Consumption
  - High Performance
  - Easy Fitting
  - Longlife
  - Light Weight

# Operation Diagram

Optimum operating temperature in a water-cooled engine is provided by a system that circulates coolant through the engine block water jacket and the radiator. The water pump is the mechanism that maintains the constant flow of coolant. In most cases, the water pump is driven by a belt pulley system, where the pulley receives power from the engine's drive belt, timing belt, or fan belt.

The structure of the water pump is comprised of the following components: pulley hub, body, shaft, bearing, mechanical seal and rotor (impeller). The shaft is mounted onto a bearing which is pressed into the water pump body. On one hand of the shaft, a pulley hub is attached, while on the other hand is a rotor (impeller). The pulley hub transfers energy from the fan or timing belt into a rotation, spinning the shaft, therefore spinning the rotor. The rotor then circulates the coolant. A mechanical seal is installed to prevent leakage of coolant into the bearing and also supports the shaft for smooth rotation. The pulley hub transfers energy from the fan or timing belt into a rotation, spinning the shaft, therefore spinning the rotor. The rotor then circulates the coolant. A mechanical seal is installed to prevent leakage of coolant into the bearing and also supports the shaft for smooth rotation.

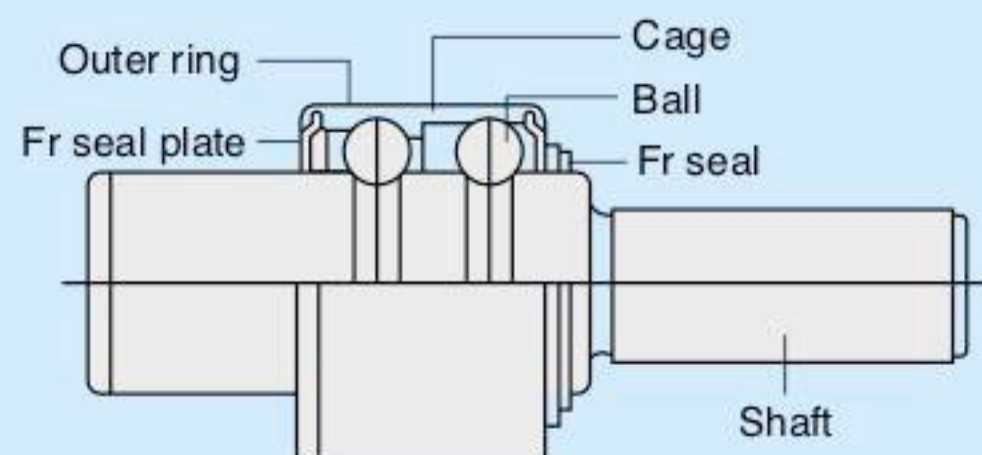

The body of the water pump is equipped with a vapor hole and a weep hole. The vapor hole relieves excess gas pressure seeping through the mechanical seal. The weep hole bleeds off excess coolant seeping through the mechanical seal. Both holes function as a safety to protect the shaft and the bearing from contamination.

# AISIN Water Pump Characteristics

## Bearing

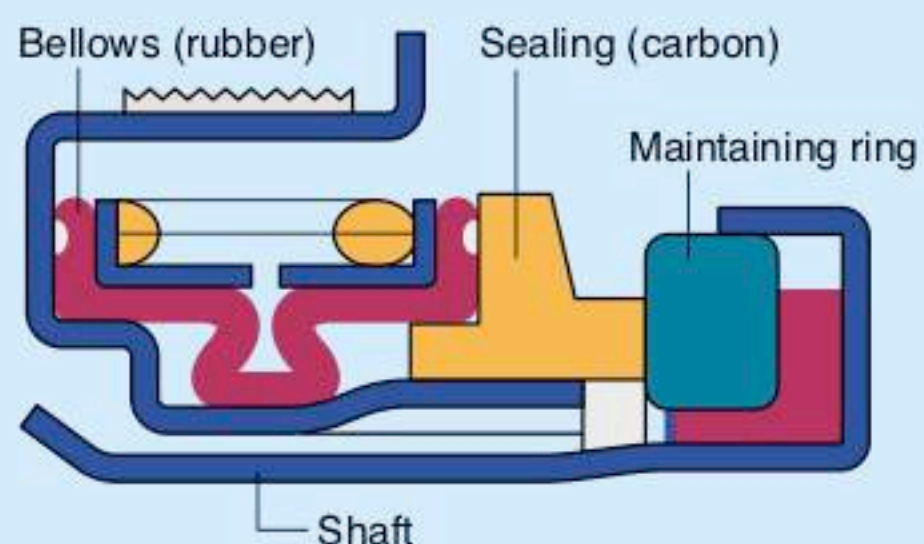

### Wear Resistance

The bearing relieves pressure on the shaft from the tension created by the fan or timing belt. Since pressure is continuously applied, a high quality bearing is of utmost importance to protect the water pump from failing.

## Mechanical Seal

### Leakage Resistance

The mechanical seal prevent coolant leak as well as support the rotation of the shaft. The structure of the airtight seal and durable materials also used prevent unneeded noise and vibrations.

## Pump Rotor

### Corrosion Resistance

Quality materials for the rotor are a necessity to create and maintain geometrical complex for the optimization of coolant flow, as well as resisting corrosion from rust, scaling of coolant and cavitation.

## Pump Body

### Vapor hole

### Weep hole

Quality materials are used to withstand heat, vibration and corrosion. Water channel is designed with optimal flow of coolant. Positioning of vapor hole and weep hole are key to prevent excess coolant from bearing and shaft contamination.

## How to exchange the electric water pump for thermal engine

- 1 Take out the cover in the trunk, remove the "Minus terminal" of "Sub battery".

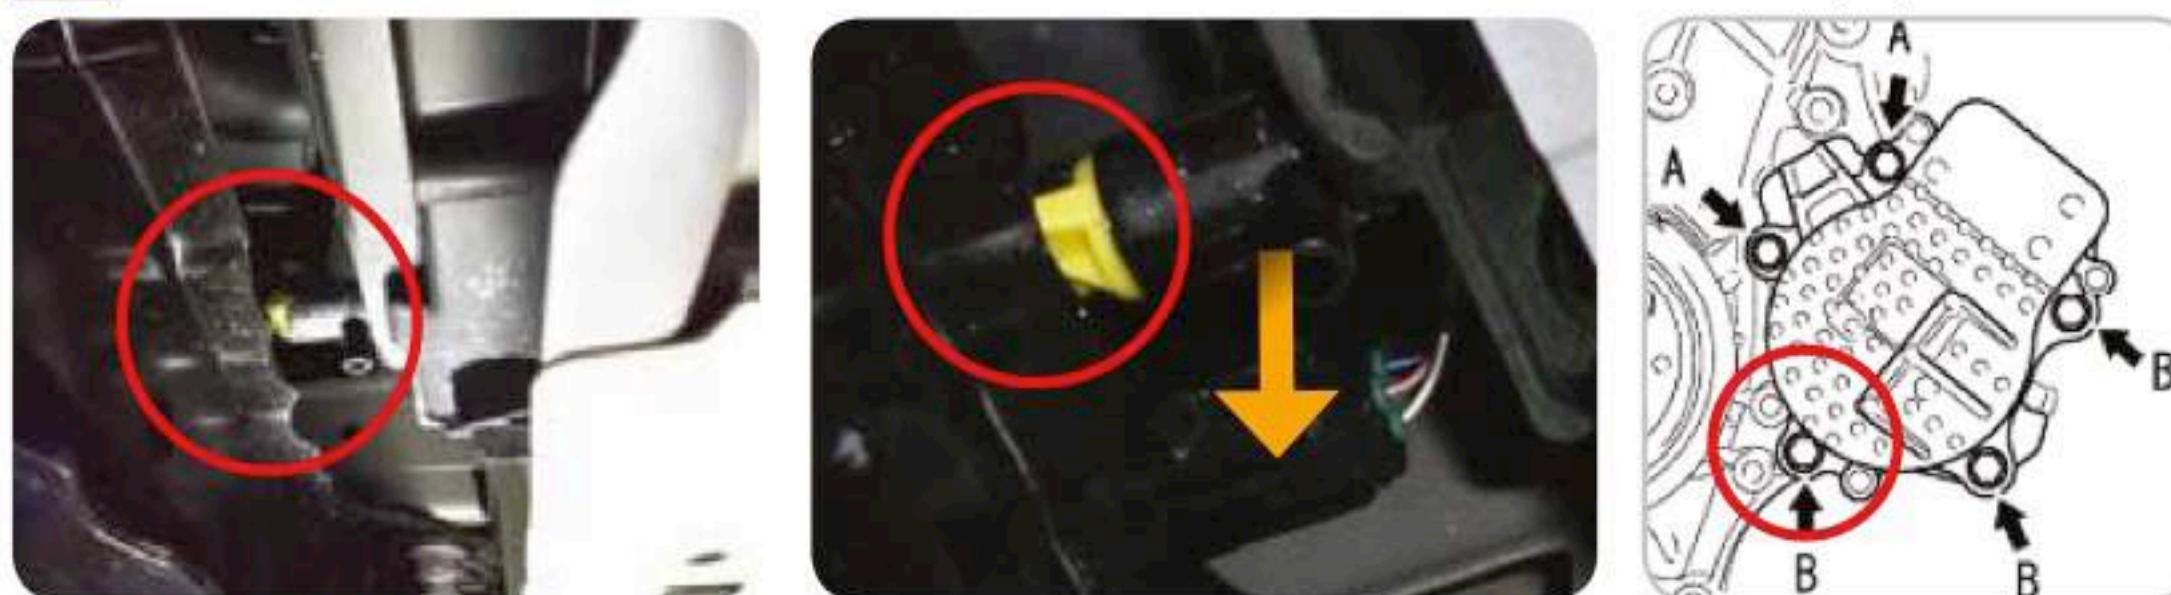

- 2 Remove the "Service Plug" of the main battery. ⚠ Electricity remains in inverter.

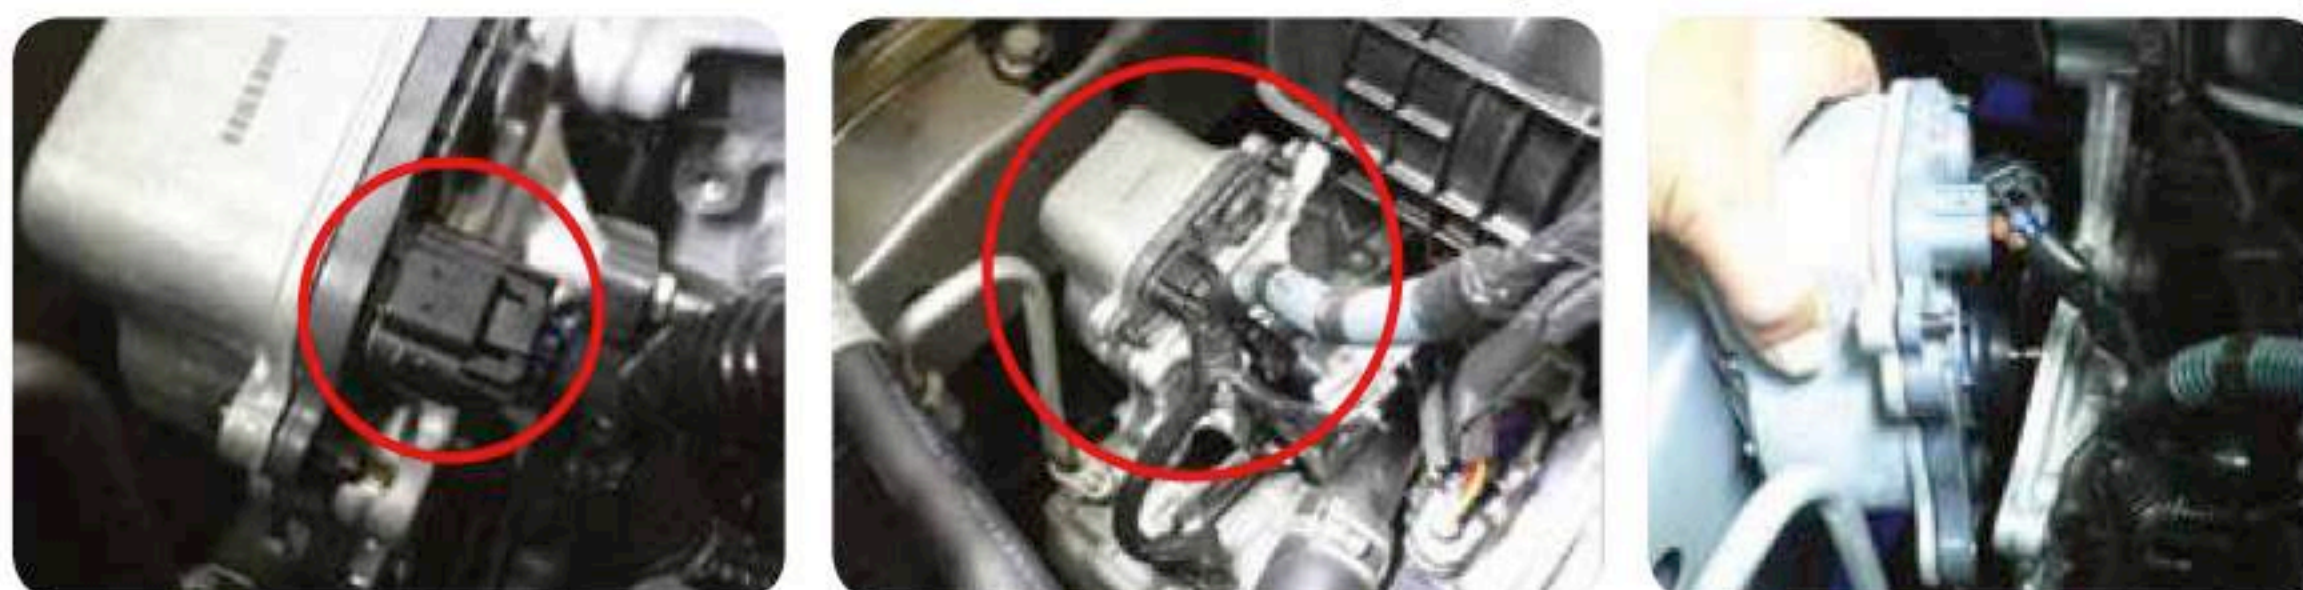

- 3 Lift up the vehicles, and remove the under cover.

- 4 Loosen the LLC cock, and take the LLC out. And Lift down the car. Before lift down, do NOT forget to take out the bottom bolt of the electric water pump. ⚠ The bolt cannot be removed unless vehicles are in lift up position.

- 5 Open the engine room, and remove the air cleaner.

- 6 Remove the connector of the electric water pump, and remove the water pump.

## Electrical Water pump Notice

- 7** Install the new water pump, insert the connector until click, and install the air cleaner.

### Torque

Long bolt (A) 26N\*m

Short bolt (B) 21N\*m

- 8** Lift up the car, and install the bottom bolt, and install yellow bolt for water drainage.

- 9** Lift down the car, and pour LLC. Clip the cap of reservoir tank.

- 10** Put back the service plug and the minus terminal of sub battery.

### Minus Terminal

After connecting minus terminal, make sure close it with wrench.

- 11** To circulate LLC, start engine. Put heater on to remove air.

### You need to set maintenance mode to start engine.

#### < Please set to maintenance mode >

Push power switch twice without stepping on brake and turn ignition on.

**1** > Full slot the accelerator twice, with shift P.

**2** > Full slot the accelerator twice, with shift N.

**3** > Full slot the accelerator twice, with shift P.

**Do these 1 > 3 within 10 seconds.**

**4** > Hybrid system error will be turned on in the display.

**5** > While stepping on brake, turn power switch on. Then 'READY' lamp will turn on in the display.

#### < Maintenance mode off >

Turn power switch off to end maintenance mode.

**Make sure that you turn the "maintenance mode" off before start driving.**

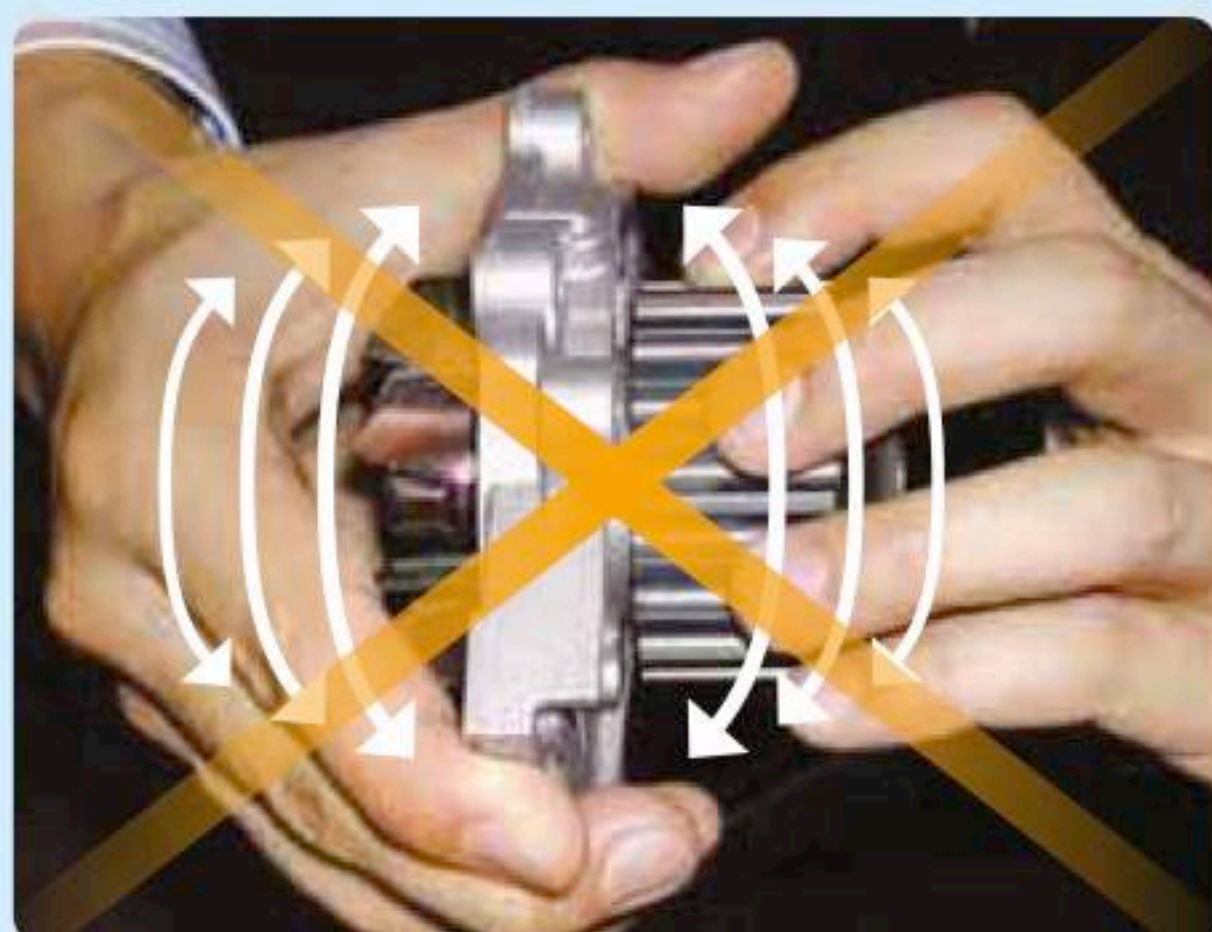

- 12** Lift up the car, and double check whether leak has not happened.

- 13** Put back the cover in the trunk.

Do not manually turn the pulley before installation of the water pump.  
In the mechanical seal, the soft carbon block may create residue on the ceramic block, generating abnormal (squealing) noises during operation.

## 1. Do not dry turn the pulley!

**WARNING!**  
Dry turning will damage the mechanical seal.  
Pre-lubricate before turning.

## 2. Seal Damage Example

Mechanical Seal Inner View

Carbon block

Ceramic block

Dry turning will deposit carbon onto the ceramic block, causing squealing during operation.

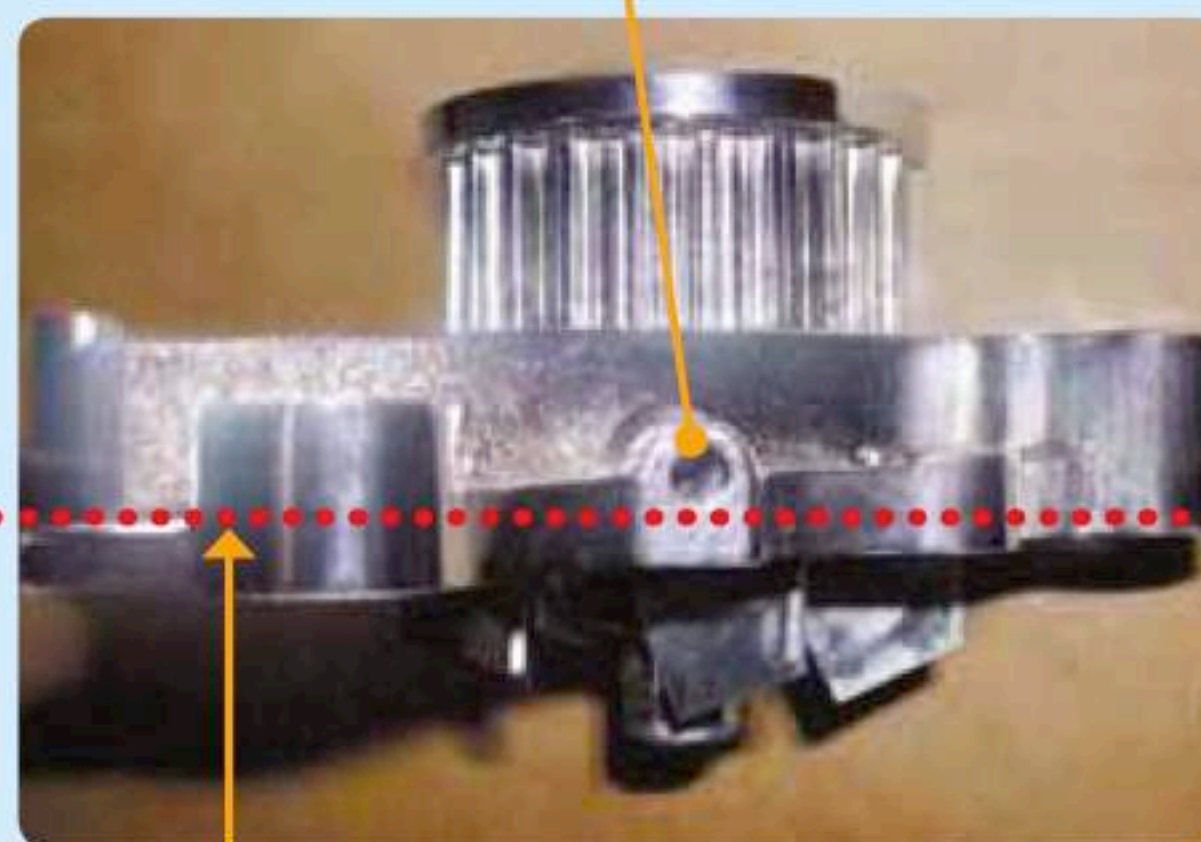

## 3. Pre-lubrication

Submerge the lower part of the pump body and the base of the rotor.

## 4. Water level

**Caution:** Do not submerge the weep hole or vapor hole in water

Submerge the water pump body below the red line

## PRECAUTIONS

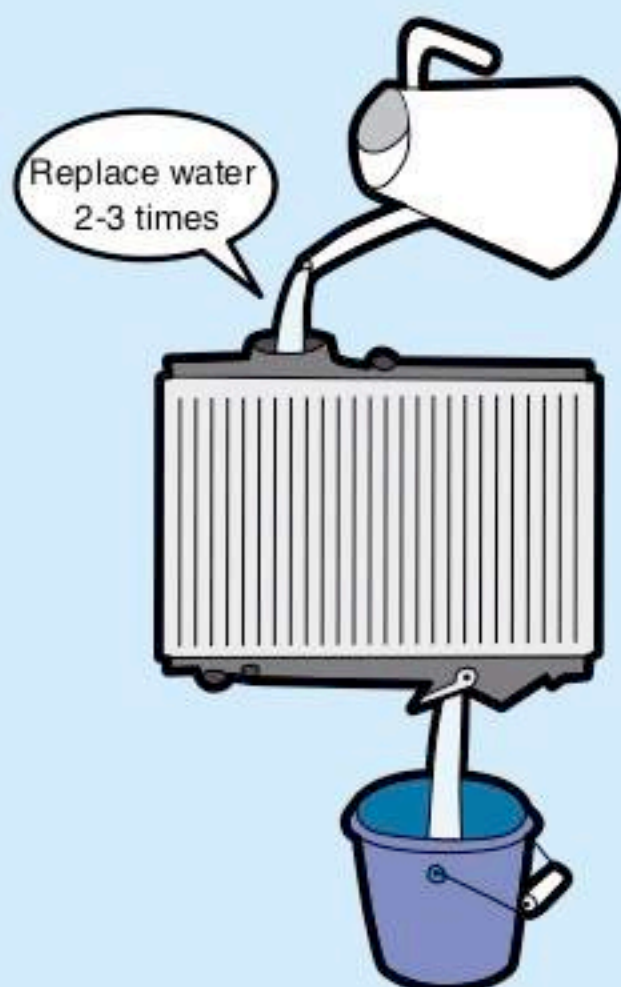

It is recommended that the lower part of the water pump is submerged in water for approximately 3 minutes prior to installation. This is to form a layer of water between the carbon and ceramic blocks in the mechanical seal, and prevent abnormal (squealing) noises from being generated.  
(Some noise may be heard at initial start-up, but will disappear after engine warm-up.)

# Installation Procedure

1

Flush the radiator 2-3 times with water while letting the engine idle. This will remove scale, rust deposits and sludge from the coolant system.

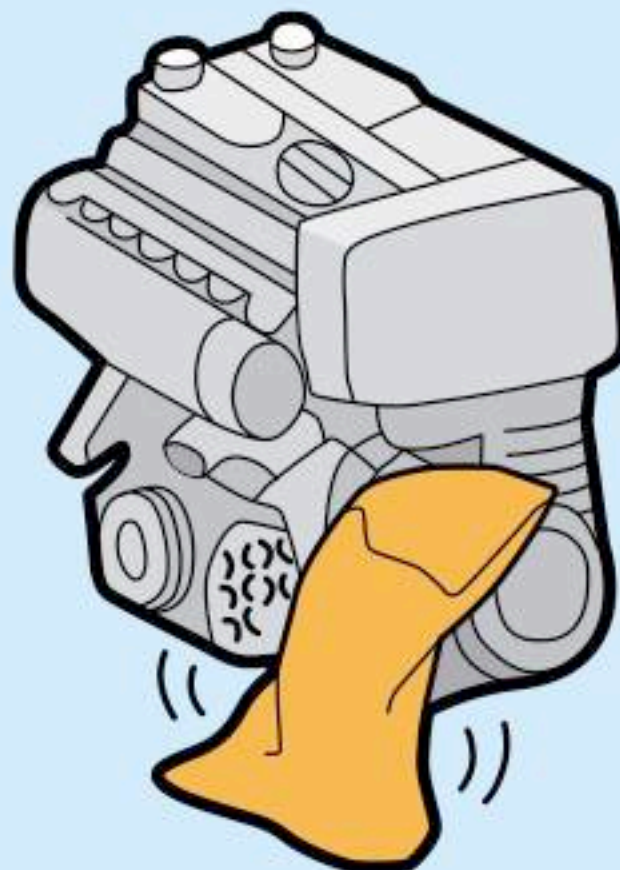

## WHY ?

Prevents foreign materials from contaminating the new water pump mechanical seal.

2

After engine is cooled down, drain water from step 1, remove old pump, gaskets and foreign materials left on the mounting surface. Thoroughly clean with non-abrasive solvent

## WHY ?

Prevents leakage from the mounting surface.

3

If a sealant is needed, apply an even amount around the pump. Wipe off excess and make sure the sealant (RTV) does not intrude into the water channel.

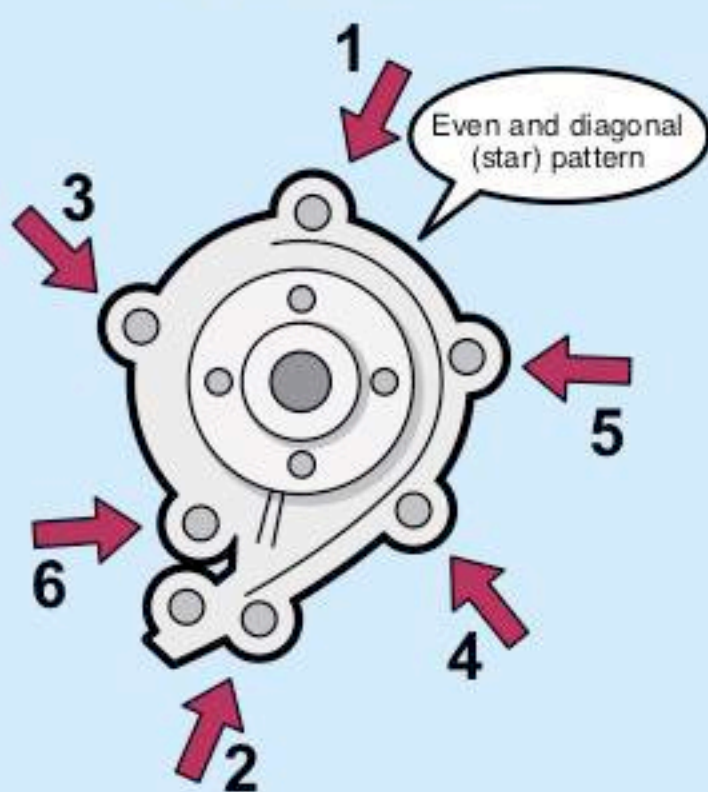

## WHY ?

Excess sealant material may damage the mechanical seal, which may cause pump failure.

4

Install the new water pump in a diagonal (star) pattern and apply torque specified by the vehicle manufacturer. Allow sealant(RTV) to cure if applied.

## WHY ?

Prevents leakage from the mounting surface.  
Prevents body damage from installation.  
Prevents body fractures caused by belt tension.

5

Confirm that the fan coupling is free of rust and contaminants. After installation, verify run-out tolerances specified by the manufacturer using a dial indicator.

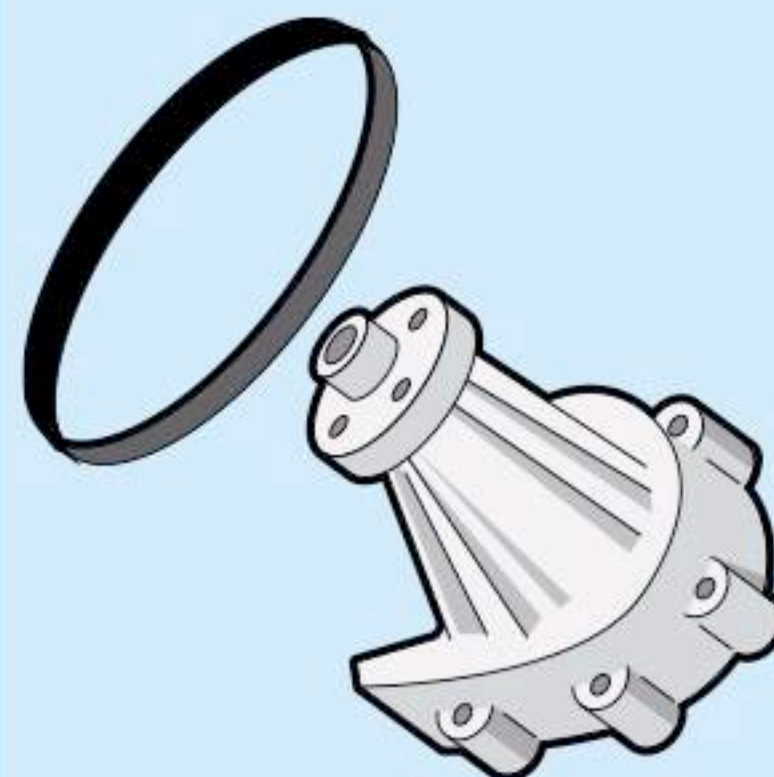

## WHY ?

Prevents fractures and damage caused by belt tension.

6

Install the fan belt or timing belt and apply tension specified by the manufacturer.

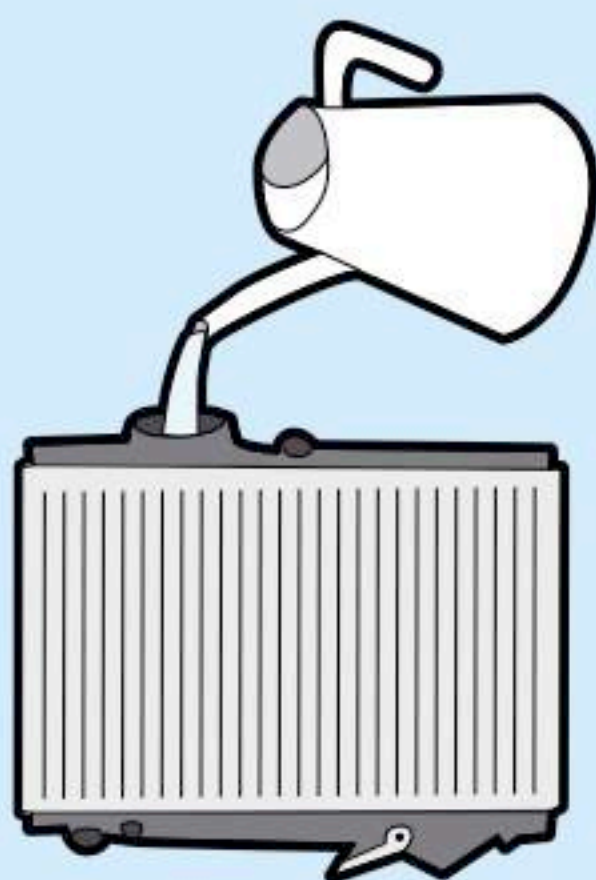

## WHY ?

Prevents fractures and damages caused by belt tension.  
Prevents noise.

7

Refill with new coolant (LLC) to the mixture amount and volume specified by the vehicle manufacturer.

**WHY ?**

Insufficient amount or incorrect mixture of coolant (LLC) will cause abnormal wear of the mechanical seal, which will cause coolant leak.

8

Bleed the air completely to ensure the engine, pump, radiator and reservoir are filled with the manufacturer specified amount of coolant.

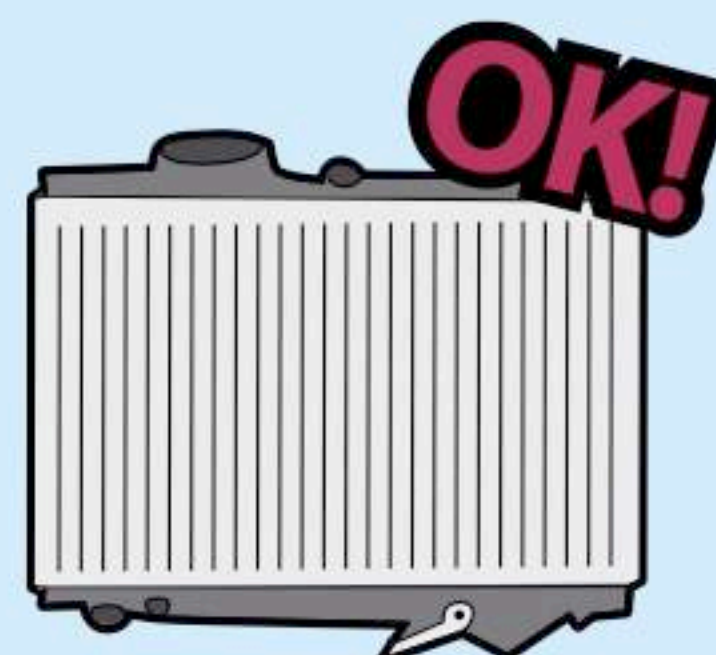

**WHY ?**

Insufficient amount or incorrect mixture of coolant (LLC) will cause abnormal wear of the mechanical seal, which will cause coolant leak.

Air bubbles may create additional cavitation which will corrode the rotor.

9

Reconfirm the amount of coolant(LLC) and belt tension. Start the engine and look for leaks.

**WHY ?**

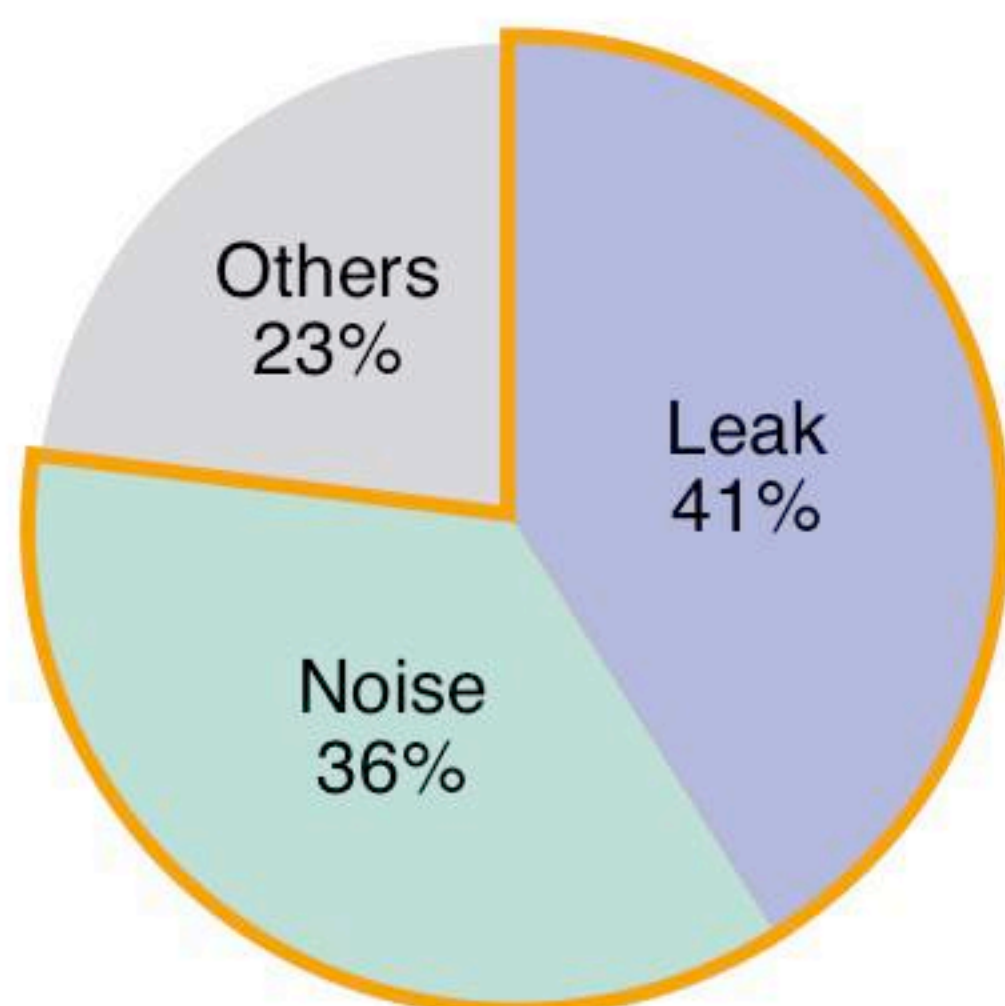

Prevents coolant leak under normal operation.

Prevents damage from installation.

**CAUTION**

**Failure to follow recommended procedures may cause engine failure and injury.**

### Failure Rate by Cause (Customer complaints)

More than 75% of failures are due to complaints related to coolant leaks and noise occurring from the water pump.

To prevent most water pump problems from occurring, follow the 4 key steps described in the installation procedures from steps:

- 1** Flush the radiator and coolant system regularly
- 6** Apply vehicle manufacturer specified belt tension
- 7** Re-fill with new coolant (LLC)
- 8** Bleed air completely

# Troubleshooting

## 1 Weep Hole Coolant Leak

Condition	<ul style="list-style-type: none"><li>The weep hole protects bearings from corrosion damage by preventing seepage of coolant into the pump body.</li><li>In normal operation, traces of dried coolant may be visible around the hole. Coolant leak may be occurring if there is fluid around the weep hole or if the reservoir tank reaches low coolant levels within about a month.</li></ul>
Cause	<ul style="list-style-type: none"><li>Contamination and sludge has damaged the mechanical seal, reducing sealing performance.</li></ul>
Cure	<ul style="list-style-type: none"><li>Before installing the new water pump, flush the cooling system 2 - 3 times and let engine idle for about 3 minutes with the old pump to remove any sludge deposit.</li><li>Replace the anti-freeze regularly at the specified mixture and fluid level.</li><li>Do not use sealants (RTV) when gaskets are supplied.</li><li>When sealants are necessary, apply evenly and do not allow excess to enter the water channel.</li></ul>

### → Coolant degradation

New

38,000 km (23,000 miles) 4 years old

ATTENTION	<p><b>Older coolants have higher risks of leakage.</b></p> <ul style="list-style-type: none"><li>Always flush the radiator and replace with new coolant.</li><li>Replace coolant regularly.</li></ul>
-----------	---

→ Fair and Poor, leak from the weep hole

**NORMAL**

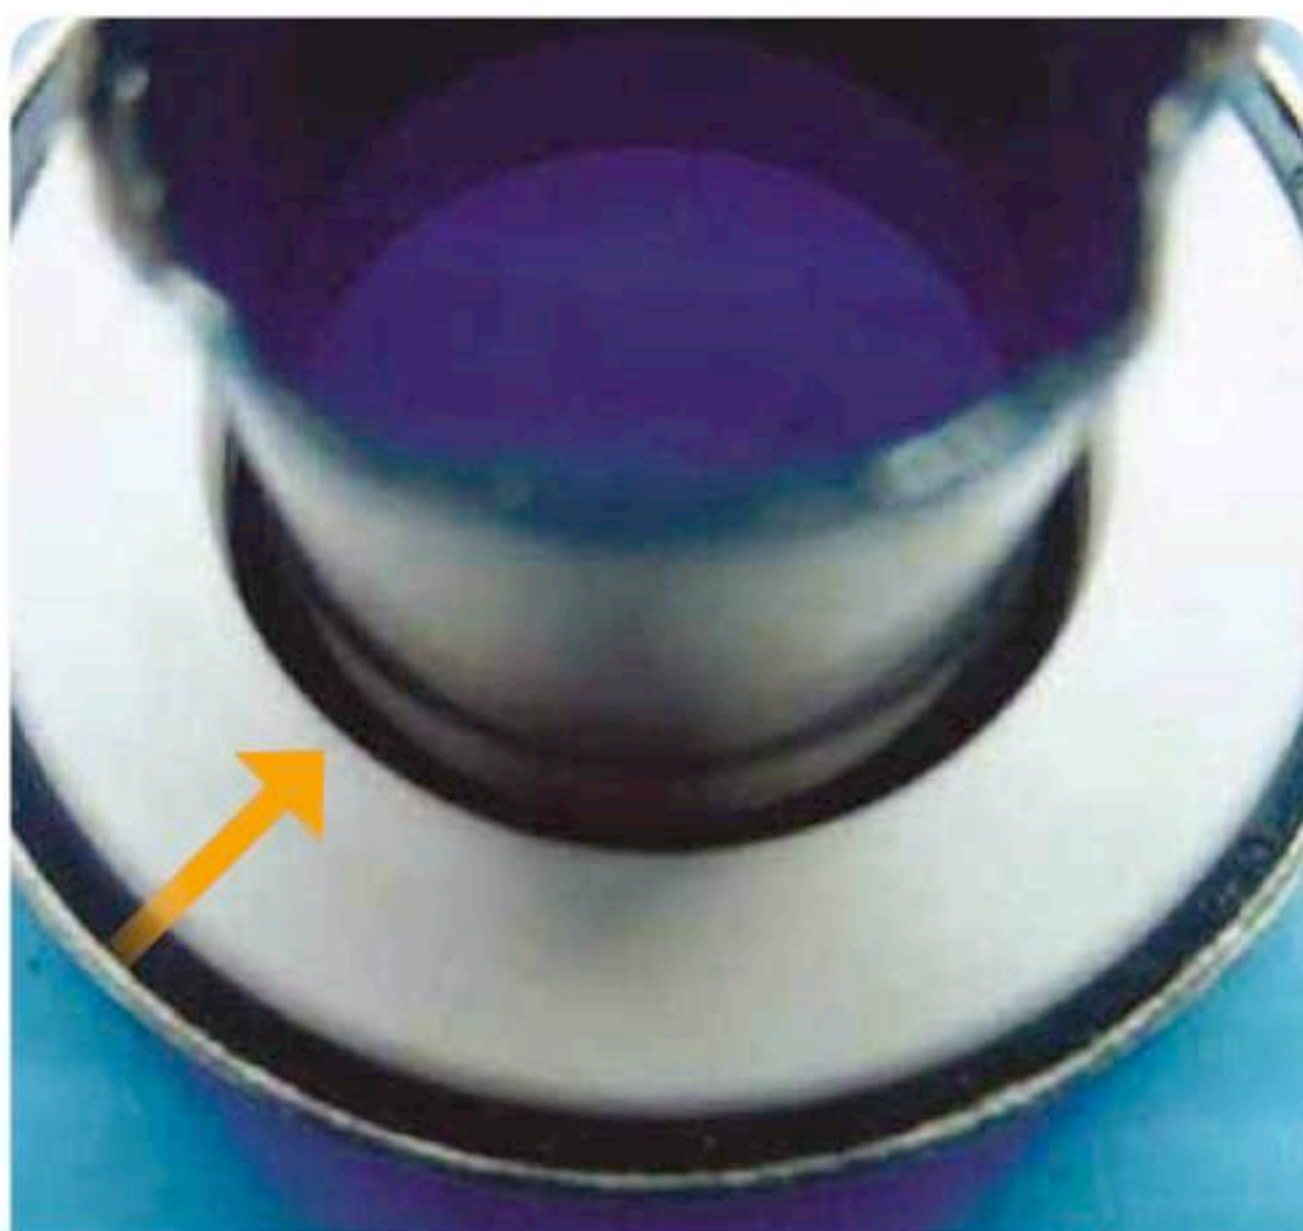

Dried coolant residue.

**DAMAGED**

Large coolant bleed mark, dampness or dripping.

→ Fair and Poor, mechanical seal ceramic

**NORMAL**

Clean ceramic.

**DAMAGED**

Accumulated sludge (Contaminated coolant).

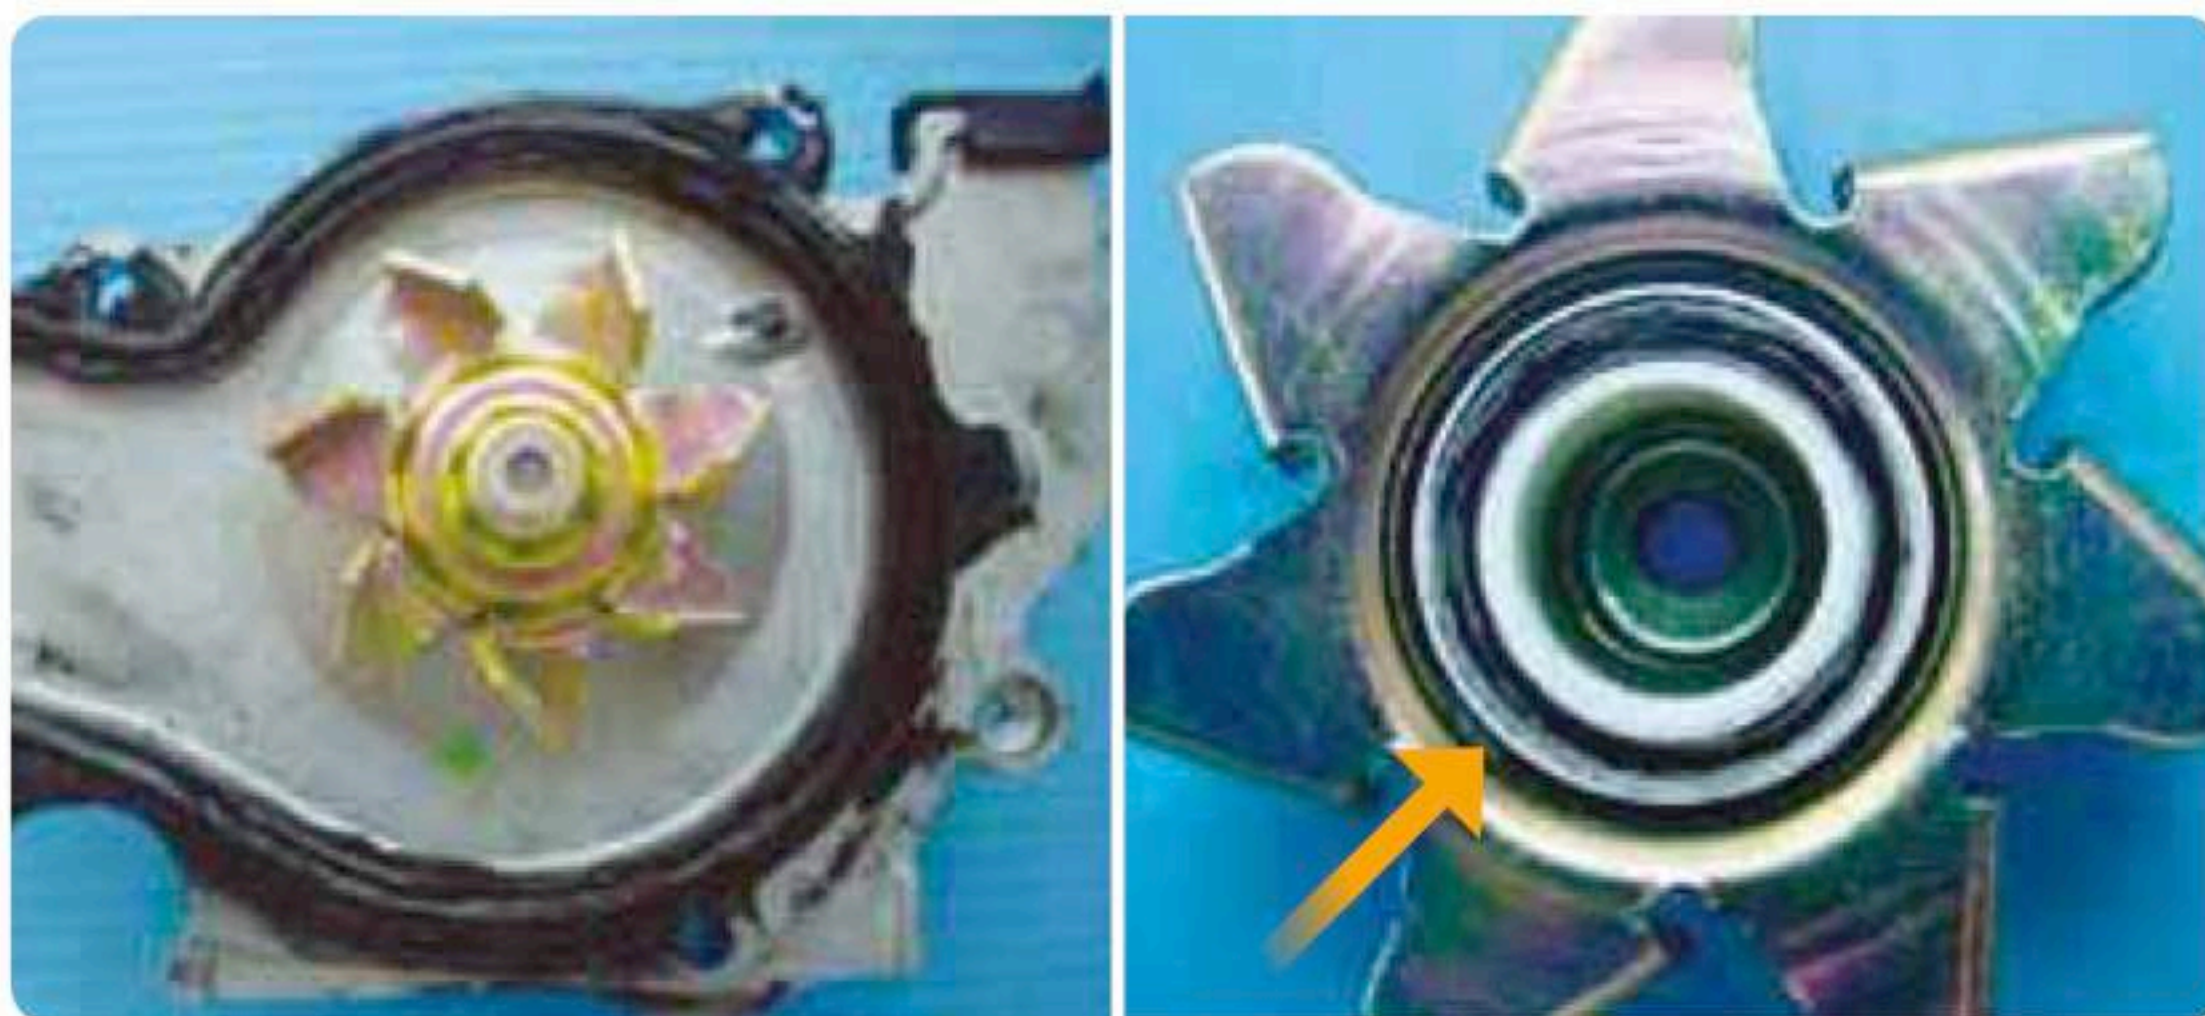

# Troubleshooting

## 2

## Seepage

Condition	<ul style="list-style-type: none"> <li>Seepage from the mounting surface</li> <li>Fractured/deformed gasket</li> <li>Unevenly tightened bolts (one side)</li> </ul>
Cause	<ul style="list-style-type: none"> <li>Deterioration of the sealing performance caused by unevenly applied sealant (RTV)</li> <li>Deterioration of the sealing performance caused by the use of adhesives</li> <li>Sealants used on the O-ring deteriorated the elasticity of the rubber</li> <li>Bolts tightened unevenly</li> <li>Contamination (dirt/grime) on mounting surface</li> <li>Mounting surface dented caused by mishandling</li> </ul>
Cure	<ul style="list-style-type: none"> <li>Use manufacturer specified sealant</li> <li>Do not use sealants when gaskets are supplied</li> <li>Do not use adhesives in place of sealants or gaskets</li> <li>Install the new water pump in a diagonal (star) pattern and apply torque specified by the vehicle manufacturer</li> <li>Clean mounting surface free of contaminants</li> <li>Do not re-use old gaskets and previously applied sealant</li> </ul>

### → Poor application of sealant

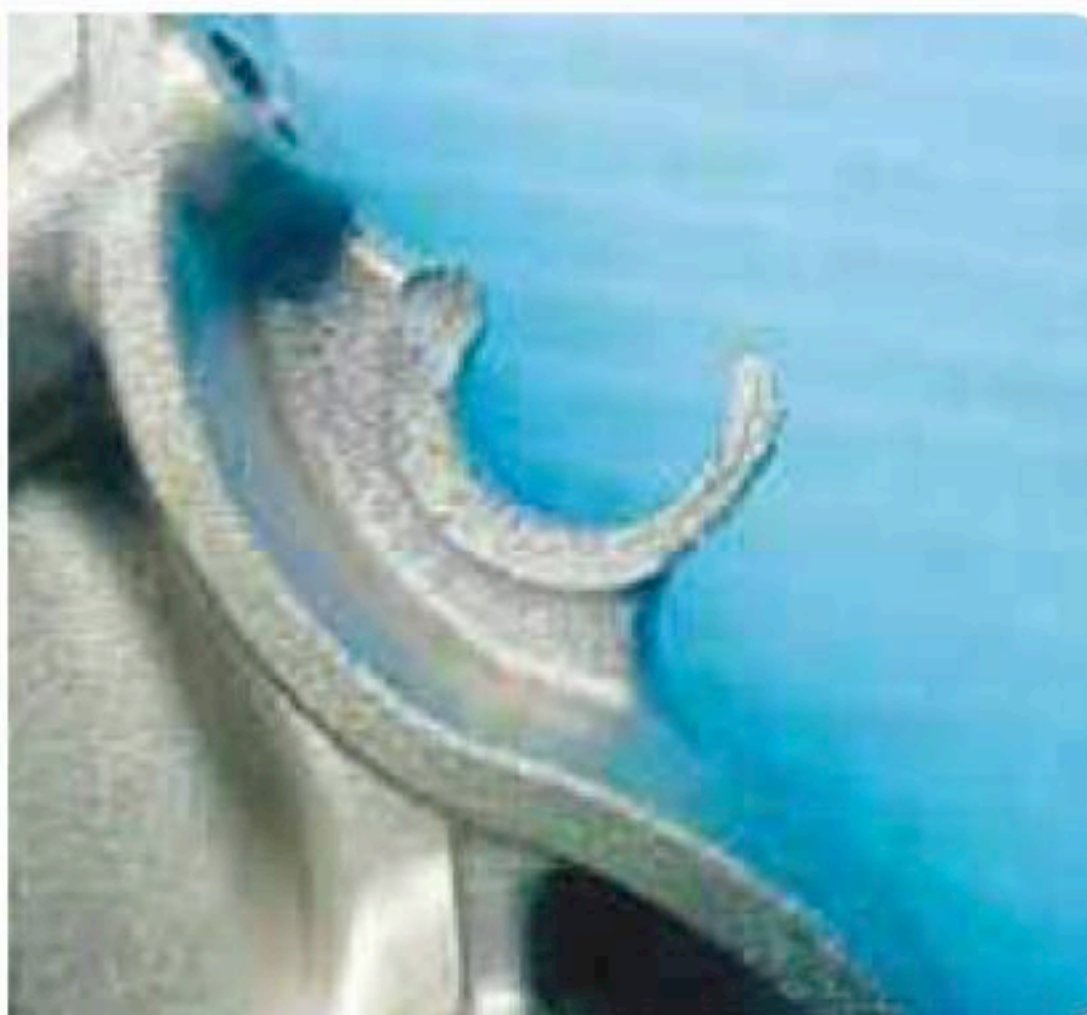

Sealant has interfered with the mechanical seal causing leaks.

→ **Excess torque of the mounting bolt**

Threads have been stripped.

Unevenly tightened or over torqued.

→ **Poor cleaning  
of the mounting surface**

Insufficient accuracy  
on the mounting surface.

→ **Sealant used  
on supplied gasket**

Gasket performance has degraded.

# Troubleshooting

## 3

## Overheating

Condition	<ul style="list-style-type: none"><li>• Corrosion of the impeller</li><li>• Fracture of the bearing</li><li>• Internal corrosion of the water pump body</li></ul>
Cause	<ul style="list-style-type: none"><li>• Old/used coolant</li><li>• Coolant deterioration</li><li>• Insufficient flushing of the radiator</li></ul>
Cure	<ul style="list-style-type: none"><li>• Discontinue use of old coolant</li><li>• Fully flush the radiator</li><li>• Replace coolant with manufacturer's specified mixture and fluid level</li></ul>

### → Coolant degradation

Contamination  
of water pump body

Impeller  
corrosion

### → Cavitation

Cavitation

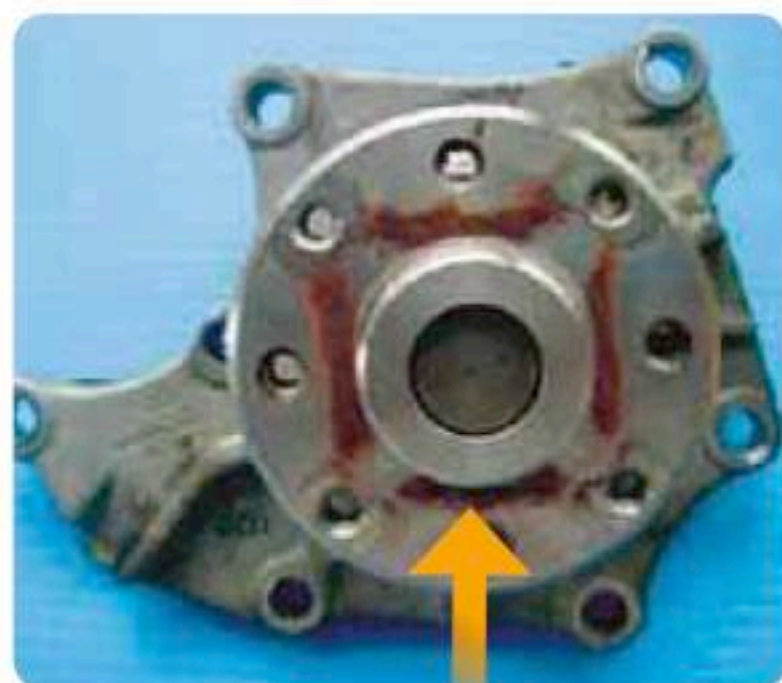

Corrosion around  
crimp

## 4 Abnormal Noises

Condition	<ul style="list-style-type: none"> <li>• Rumbling sound heard when manually turning the pulley</li> <li>• Abnormal wear at the base of the stud bolts</li> <li>• Scratches and flecks found around the bearing during disassembly</li> <li>• Contamination of the pulley seat</li> </ul>
Cause	<ul style="list-style-type: none"> <li>• Bearing fracture caused by excess belt tension</li> <li>• Bearing was fractured due to excess vibrations caused by misalignment of parts such as the fan coupling pulley</li> <li>• Uneven torque of bolts resulted in bearing failure</li> <li>• Contamination of the pulley seat</li> </ul>
Cure	<ul style="list-style-type: none"> <li>• Tighten belt tension to vehicle manufacturer specifications</li> <li>• If the fan coupling pulley is reused, confirm the run-out with a dial indicator</li> <li>• Replace fan coupling pulley with new on older vehicles or high mileage engines</li> <li>• Confirm that the bearing is lubed and free of rust, and replace if necessary</li> </ul>

### → Flecking at the pulley seat

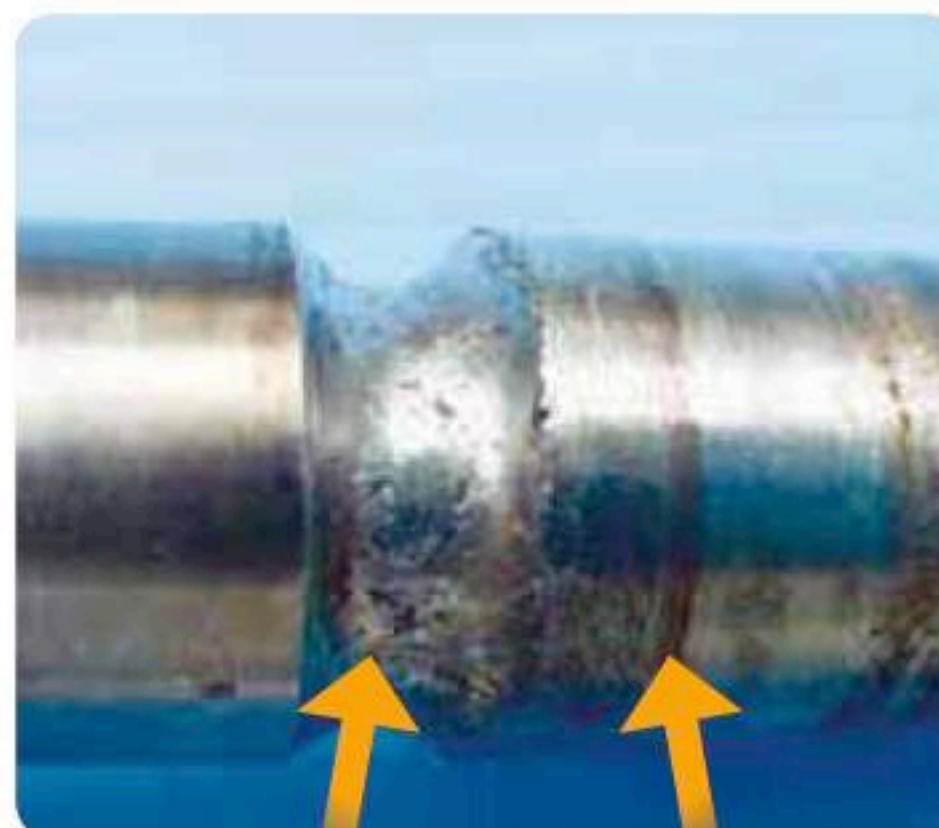

Flecking at the pulley seat

Damage at the stud bolt ends

### → Flecking at the bearing

Damage  
due to overload  
and seepage

Damage  
due to  
excess backlash

5 Other

→ Failure arisen from coolant

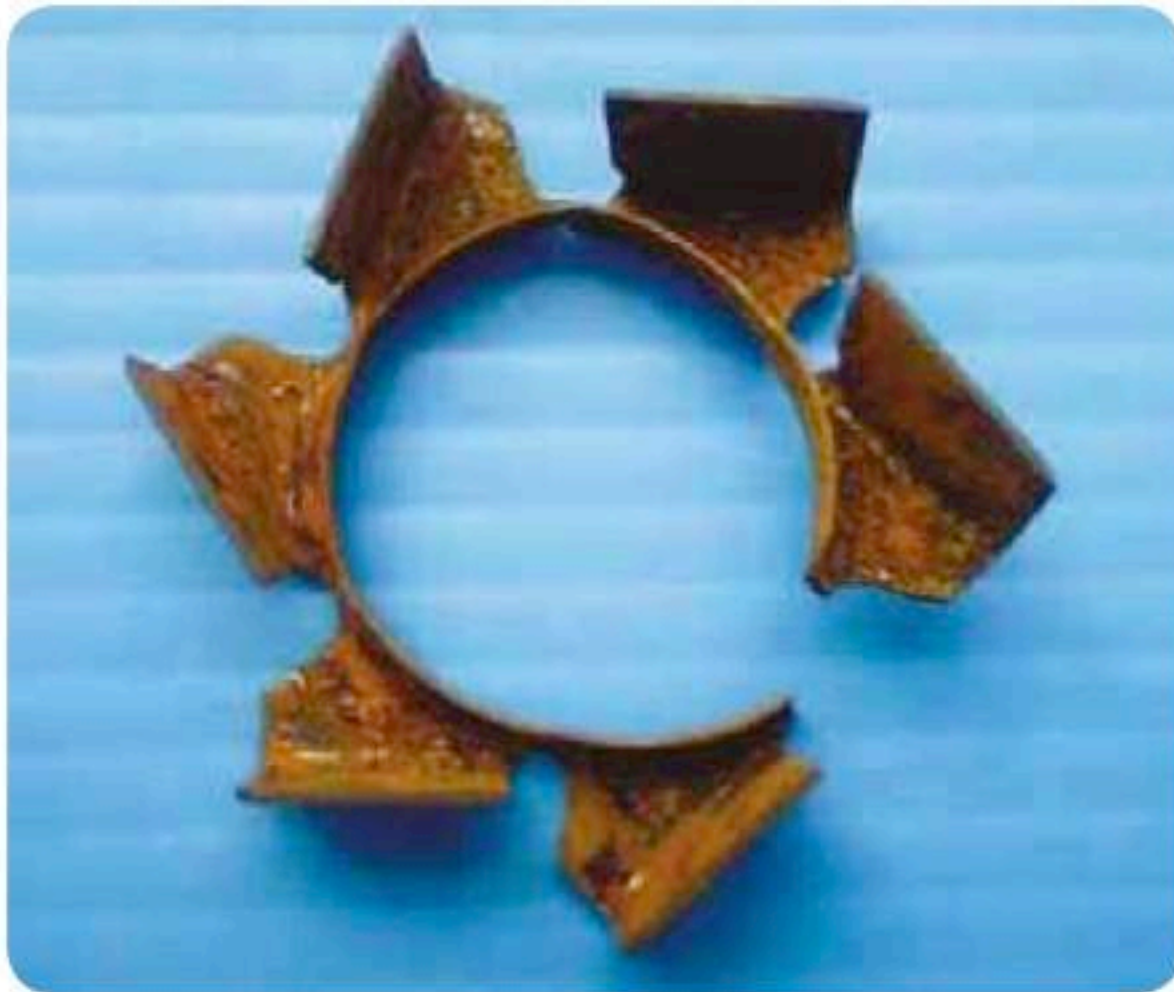

Condition	<ul style="list-style-type: none"><li>Corrosion of the water pump due to poor flushing of the radiator, lack of regular replacement or reuse of old coolant</li></ul>
Cause	<ul style="list-style-type: none"><li>Insufficient flushing of the radiator</li><li>Coolant was not replaced or had been reused</li><li>Incorrect coolant mixture or fluid level</li></ul>
Cure	<ul style="list-style-type: none"><li>Fully flush the radiator</li><li>Replace with new coolant when changing the water pump</li><li>Use correct coolant mixture</li><li>Fill system to the correct fluid level</li><li>Bleed cooling system of air</li></ul>

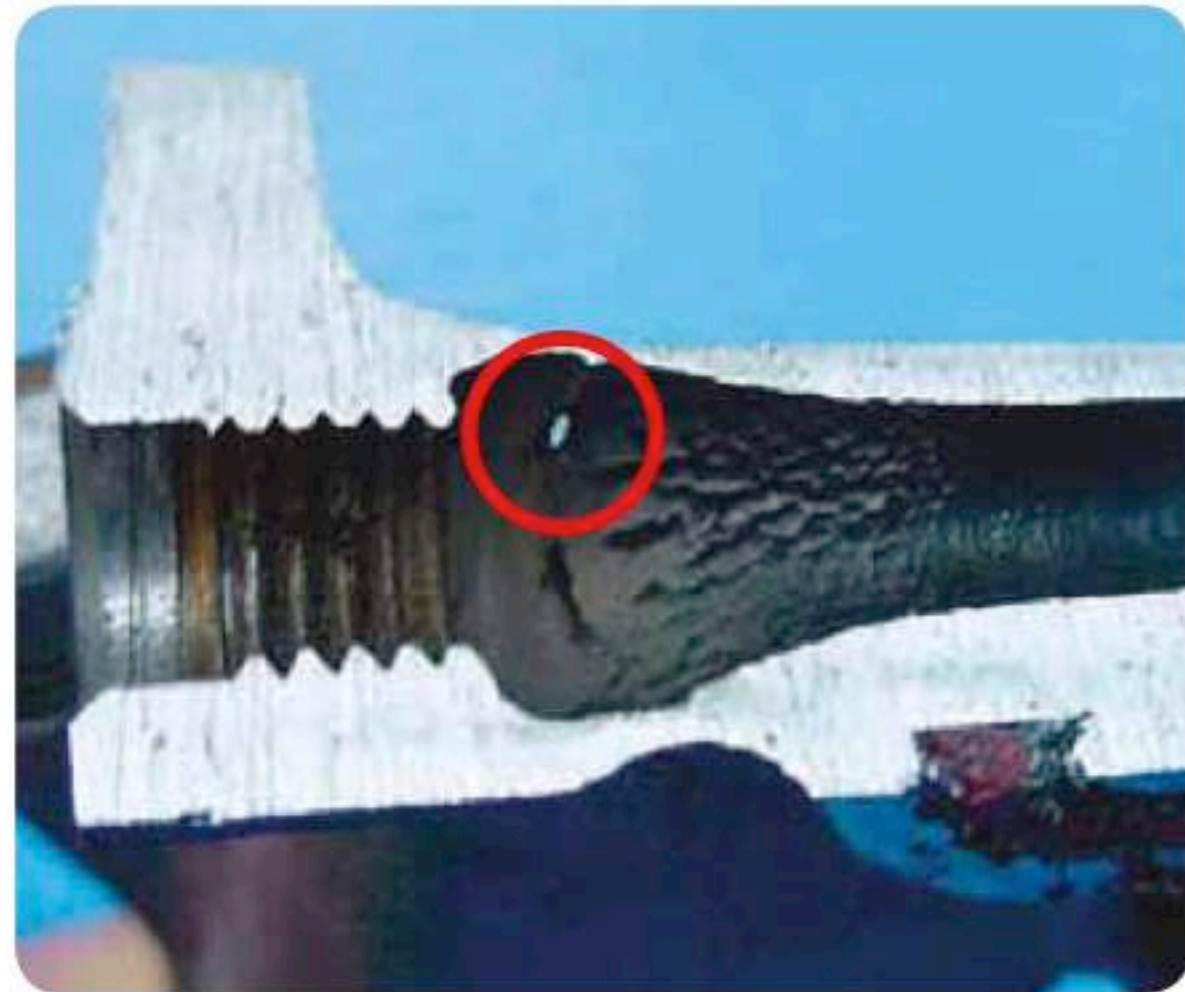

## Coolant

When replacing the water pump, flush the coolant system 2 to 3 times to wash out sludge, scale and rust deposits. Replace coolant to the manufacturer's specified mixture and fluid level. Re-using or using degraded coolant will corrode the body, impeller, and mechanical seals.

- **Severely corroded impeller**

- **Fracture caused by cavitation**

## Corrosion of impeller

No corrosion can be seen on the impeller when the coolant is clean.

Mileage: 48,000 km (30,000 miles)  
Period: Approximately 1.6 years  
Total mileage: 149,000 km (92,500 miles)

Corrosion can be seen on the impeller when the coolant is degraded (contaminated / deteriorated).

Mileage: 7,500 km (4,700 miles)  
Period: Approximately 1 year  
Total mileage: 105,000 km (65,000 miles)

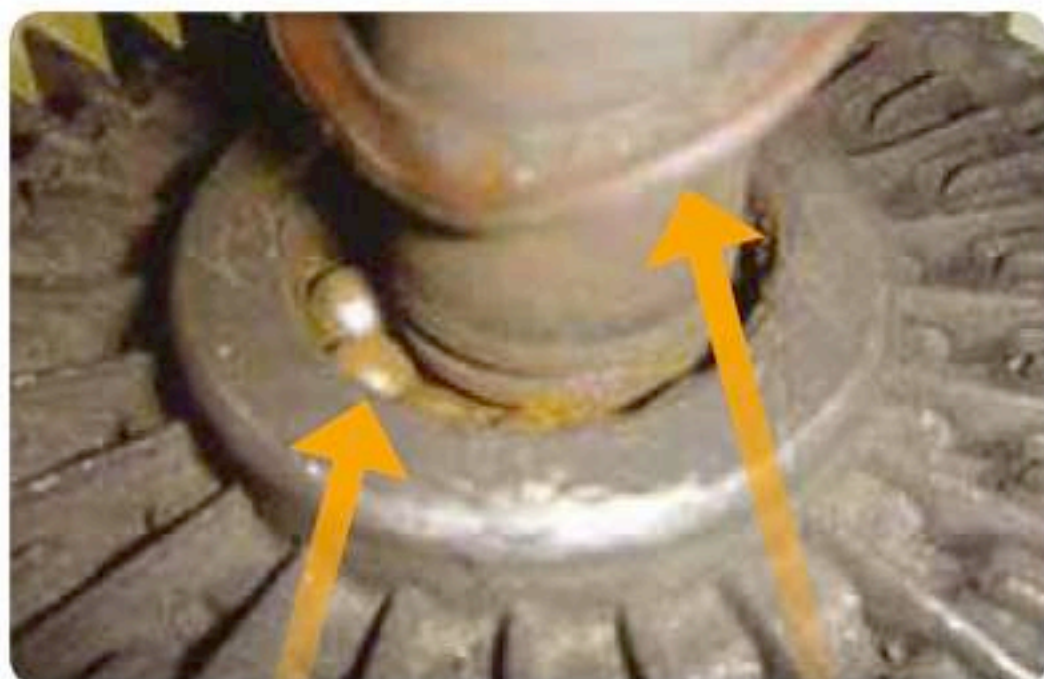

# Troubleshooting

## → Trouble caused by incorrectly installed or damaged fan coupling

Condition	<ul style="list-style-type: none"> <li>Fracture of the water pump body</li> <li>Fracture of the water pump bearing</li> </ul>
Cause	<ul style="list-style-type: none"> <li>Damaged fan coupling was reused</li> <li>Fan coupling was not installed correctly (off-centered)</li> </ul>
Cure	<ul style="list-style-type: none"> <li>Install new fan coupling when replacing water pump</li> <li>If fan coupling is reused, ensure that:               <ul style="list-style-type: none"> <li>- there is no binding or play in the bearing</li> <li>- the components are free of rust and debris</li> <li>- check for run-out with a dial indicator</li> </ul> </li> </ul>

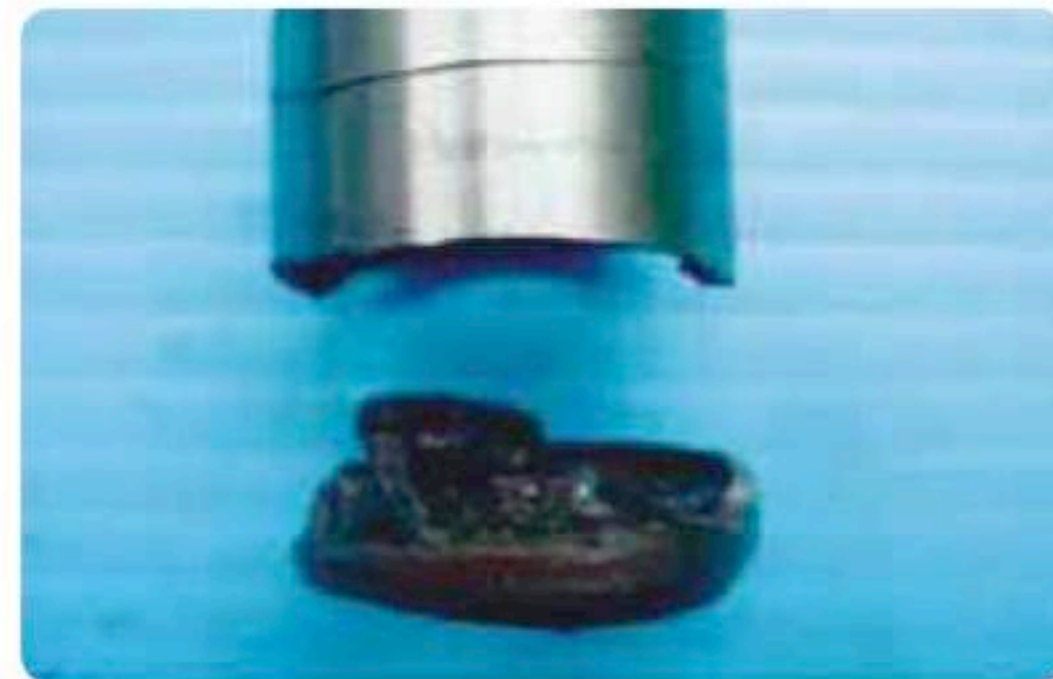

### • Enlarged view of a fan coupling

Grease has dried and rust has formed on the bearings

Bearing seal plate is broken or missing

### • Fractured bearing

If usage is continued

### • Fractured body

Severe rust build-up

## Water Pump Failures
