

PARKING MODE SWITCH

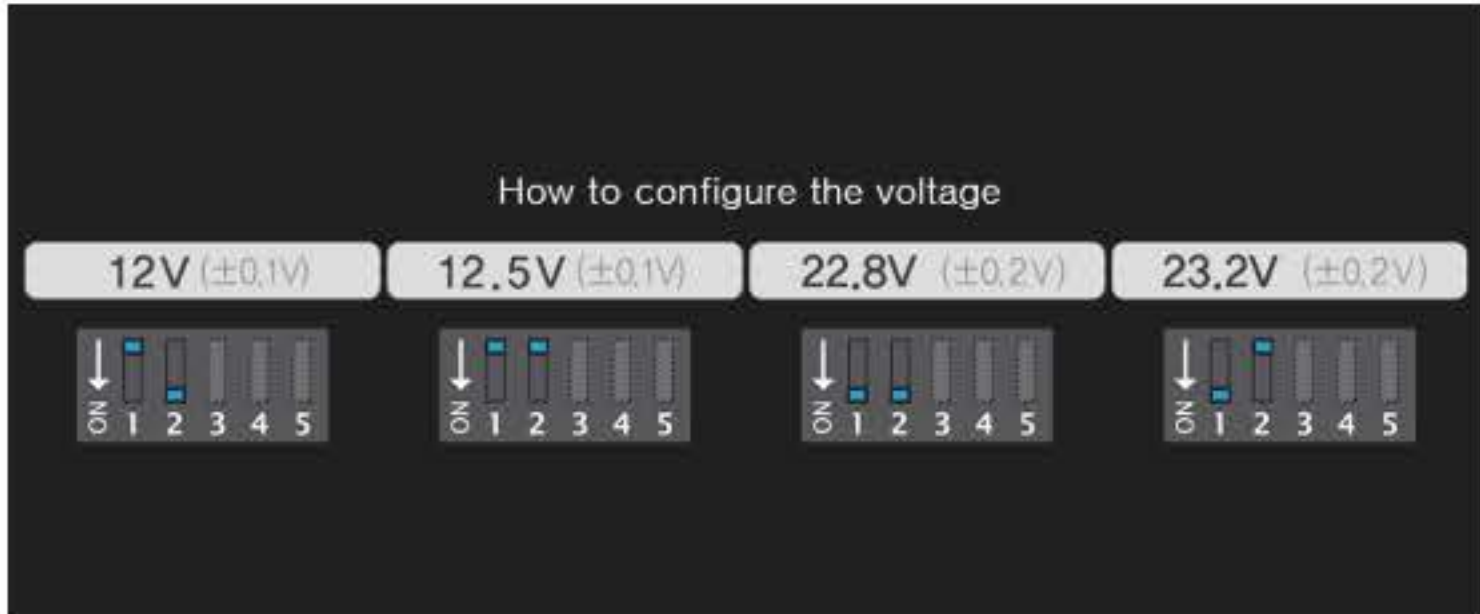

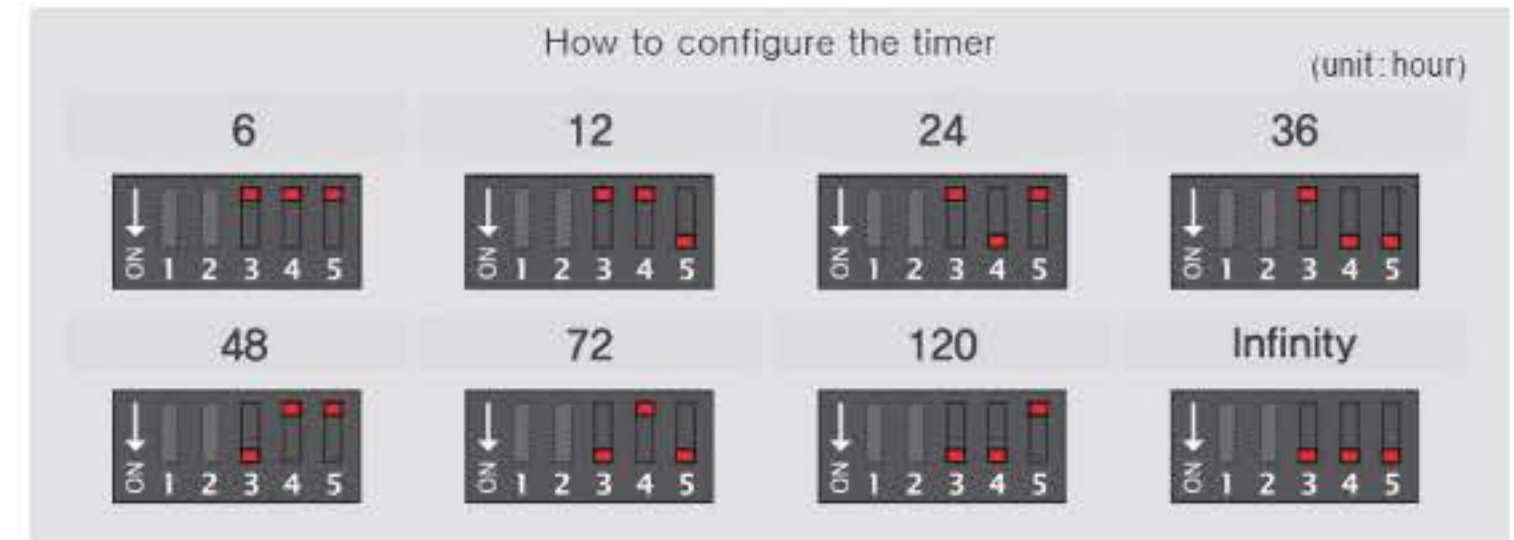

Parking Mode Switch ON: Power Magic Pro supplies your BlackVue with power even if the ignition of the vehicle is turned off, until it reaches voltage cut-off or timeout value.

Parking Mode Switch OFF: Power Magic Pro supplies power to your dashcam only when vehicle ignition is on.

TIMER CUT-OFF SETTINGS

You can configure Power Magic Pro to supply power to your BlackVue for a preset duration, from 6 hours to infinity. The timer function is only active when the vehicle's ignition is off and automatically stops if ignition is on.

* Regardless of the timer setting, the power is cut as soon as the voltage drops below the configured voltage cut-off value.

LOW VOLTAGE CUT-OFF SETTINGS

When vehicle's ignition is off, Power Magic Pro checks your vehicle's battery voltage periodically while powering your BlackVue. If power drops below the set cut-off level, Power Magic Pro automatically cuts power to the dashcam, thus saving your vehicle's battery life.

POWER YOUR BLACKVUE IN PARKING MODE

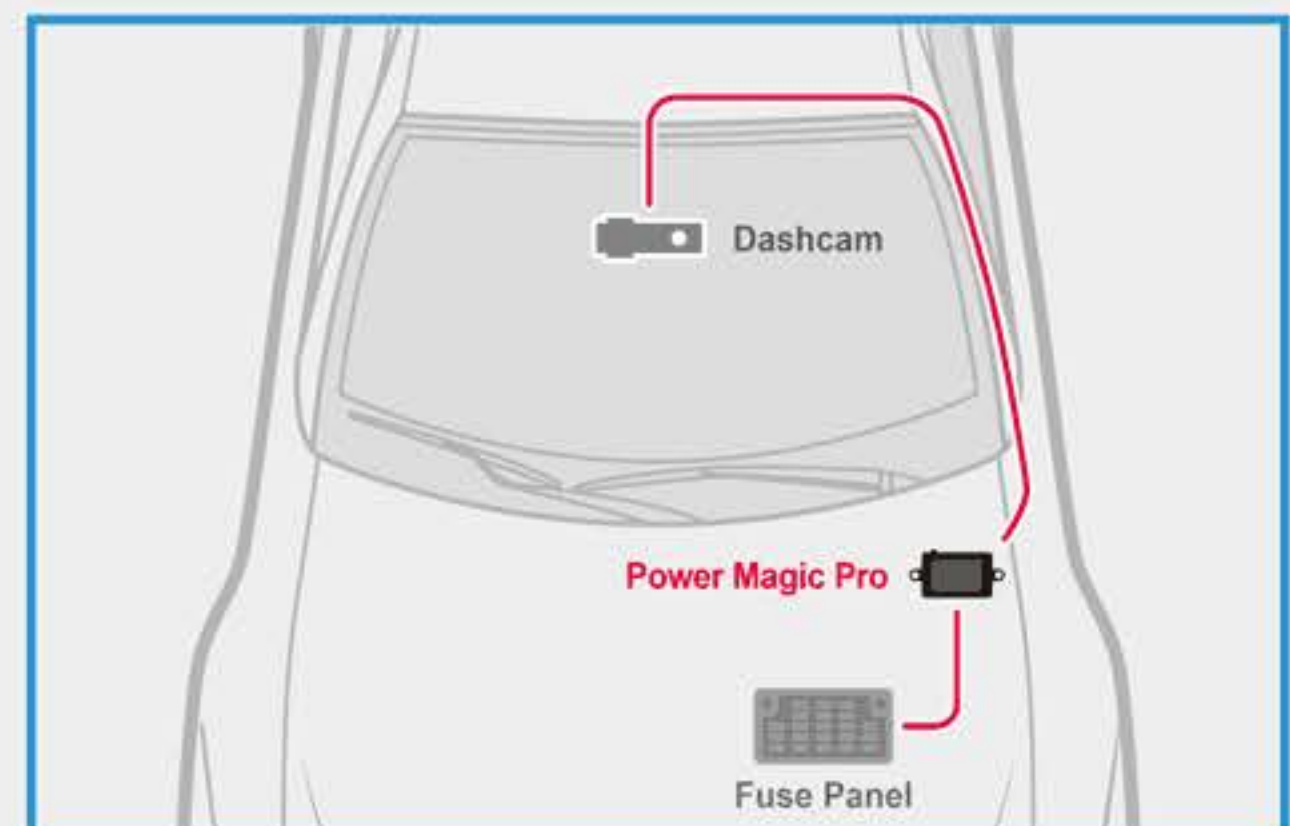

with Power Magic Pro or Power Magic Battery Pack.

Rest easy, knowing that your car is being monitored while you are away.

BlackVue dashcams automatically switch to Parking Mode to monitor your parked vehicle, but only writes to the memory card when something happens (motion or impact detected), which has two benefits:

- Less chance for important files to be overwritten during long Parking Mode sessions.
- Extended memory card lifespan in the long run.

The PRO solution – With hardwiring kit

Enable Parking Mode for your BlackVue dash camera

Power Magic Pro is a hardwiring kit that supplies power from your car to your BlackVue, while protecting your vehicle's battery.

Parking Mode switch on: power is supplied to your dash camera even when your vehicle's ignition is off, allowing for Parking Mode recording.

Parking Mode switch off: power is not supplied to your dash camera.

Two systems to avoid discharging the battery

Power Magic Pro allows to configure both timer and voltage cut-off values. Power Magic Pro will cut the power to the BlackVue based on both Timer or Voltage Cut-off value, whichever comes first. The timer can be set from 6 hours to infinite.

In addition to the timer, Power Magic Pro lets you set a voltage cut-off value. As soon as the voltage from your vehicle's battery drops to the cut-off value, Power Magic Pro will stop powering your dashcam, thus saving your battery.

Once installed, enjoy Parking Mode worry-free

Simple instructions guide you connecting it to your vehicle's fuse box. Once connected, choose the best place and fix it with either the double-sided tape or the provided screws. Power Magic Pro supports all BlackVue dash cam models, either with one or two channels.

Optional

The fuse taps allow you to easily hardwire your BlackVue dashcam to your car's battery in combination with the [Power Magic Pro](#) hardwiring kit that enables Parking Mode. The fuse taps come in 3 variations, so make sure you choose the one adapted to the fuse box in your car.

Fuse Tap for Power Magic Pro with 3 options:

Mini Fuse Tap

Low-profile Mini Fuse Tap

ATO Fuse Tap

Warranty:

1 year manufacturer's warranty
