# FLUSH THE TANK

Many variables contribute to fuel pump failures. One of the most common culprits, especially when a replacement fuel pump stops working shortly after installation, is a dirty fuel tank. It is critical that contaminants and loose debris, including rust and sediment, are removed prior to fuel pump installation as they can clog the filter, jam the turbine pump, or significantly reduce fuel flow due to build-up. The single most important way to prevent this is to ensure you start the fuel pump repair process with a clean fuel tank.

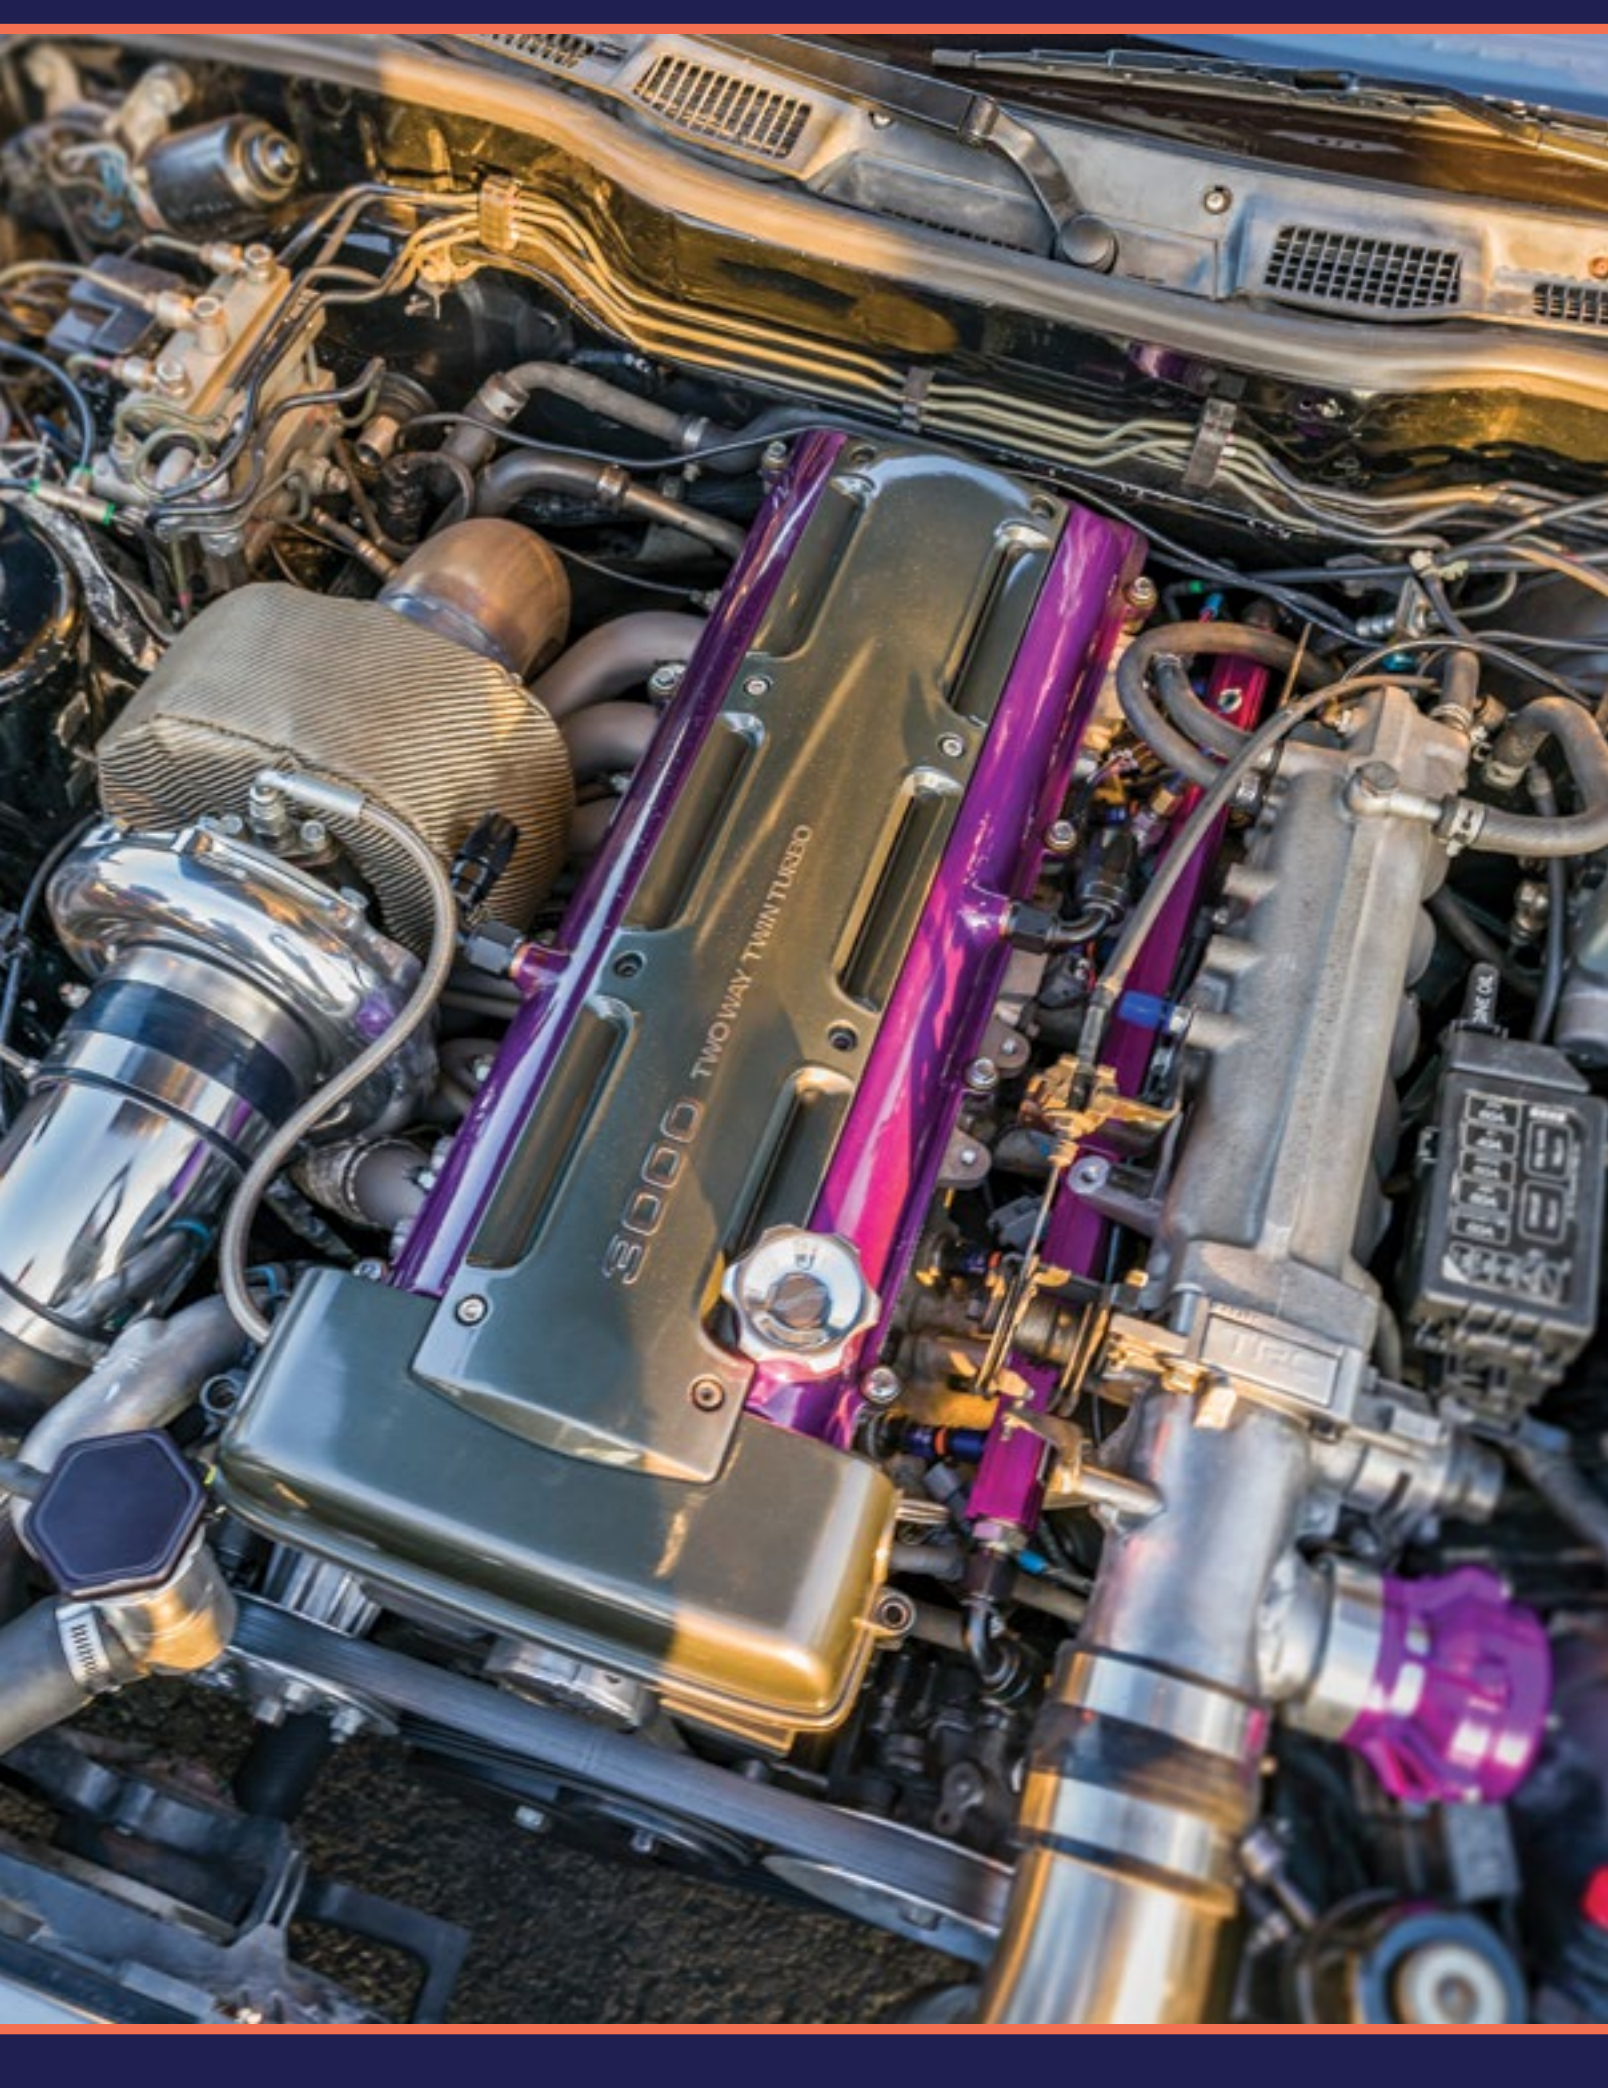

## STEP-BY-STEP INSTRUCTIONS FOR PROPER FUEL TANK CLEANING:

- 1 Drain all fuel from tank with an approved container or a fuel caddy
- 2 Drop the tank (see your service manual for further instructions)
- 3 Clean area where pump is being removed from with a brush
- 4 Remove fuel pump from tank (avoid letting residual debris fall into the tank)
- 5 Insert hose into fuel tank and begin pouring stream of clean, hot water
- 6 While water is filling, spray mild detergent in the tank
- 7 If opening allows, use a brush to loosen debris from the sides of the tank
- 8 Stop stream of water
- 9 Swish the water around to ensure all debris has been captured
- 10 Dump dirty contaminated water out into a pan, being sure to capture any liquids
- 11 Further wipe tank out with a lint-free washcloth
- 12 Dry the fuel tank completely with compressed air
- 13 Inspect the tank for rust or physical damage; if present, the tank must be repaired or replaced
- 14 Add fuel line antifreeze/water remover to help absorb any residual moisture
- 15 After the tank has been dried, let it sit for 30 minutes

Safety tips and tricks for cleaning the fuel tank:

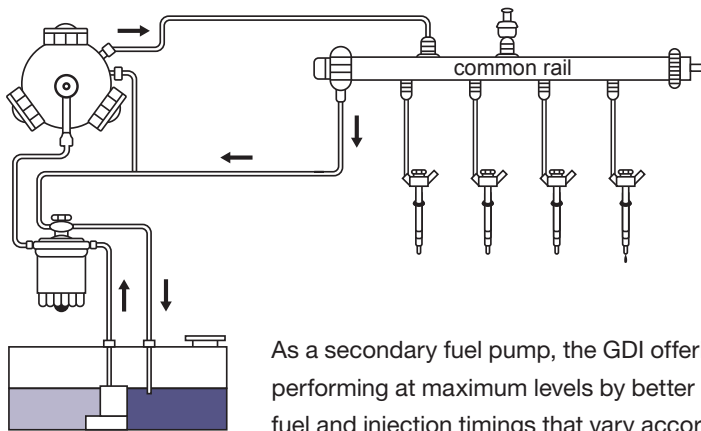

- Wear appropriate clothing and protective gear such as safety goggles
- Place a Class B or C fire extinguisher nearby
- Store fuel in an approved container or tank
- Keep all containers tightly closed and handle them gently to avoid spills
- Set materials at least 50 feet away from ignition sources
- Dispose of fuel in accordance with federal, state and local guidelines

# HIGH PRESSURE GDI FUEL PUMPS

In an effort to provide complete coverage to professional technicians, Carter offers high pressure gasoline direct injection (GDI) fuel pumps for applicable vehicles with high fuel pump pressures that may exceed 2000 PSI to increase fuel efficiency and deliver higher power output. The GDI fuel pump is located outside the fuel tank and operates, as necessary, to complement the primary fuel pump.

As a secondary fuel pump, the GDI offering ensures the vehicle is performing at maximum levels by better controlling the amount of fuel and injection timings that vary according to engine load.

Additionally, the pump delivers operating pressures from 500 to 2900 PSI to accommodate various vehicle designs.

- 100% factory tested and approved
- Ideal for vehicles with high fuel pump pressures up to 2900 PSI
- GDI applications feature high fuel flow capability to enable faster start times
- GDI applications increase horsepower, torque and overall engine fuel efficiency

Carter high pressure GDI fuel pumps are suitable for most combustion GDI programs.

Engine cylinder capacity	4-8 cylinders
Peak pressure	200 bar, 2900 PSI

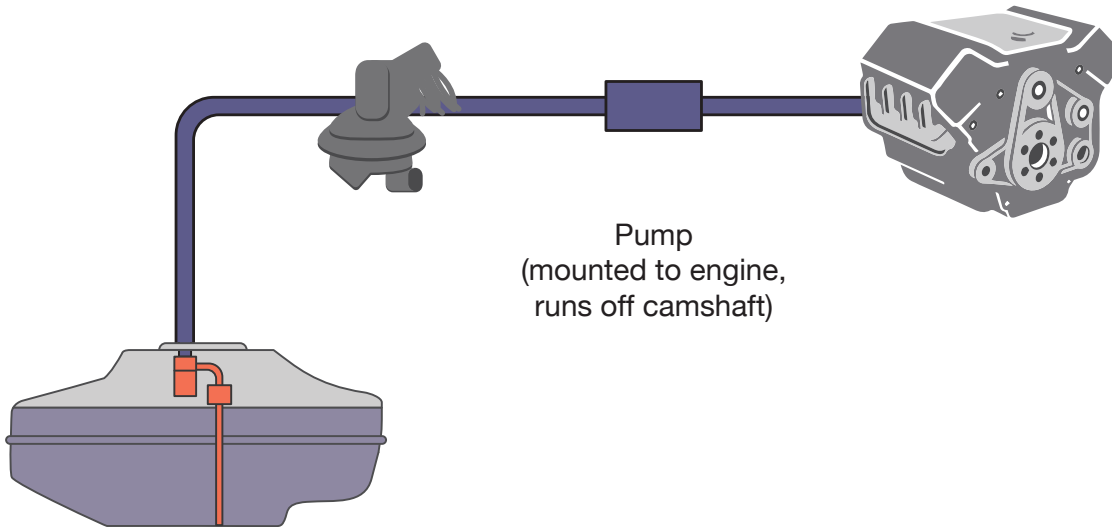

## MECHANICAL FUEL PUMPS (FIRST GENERATION)

By offering an “All Makes – All Models” program, Carter displays an unwavering commitment to the automotive industry. This includes extensive coverage for vehicles utilizing first generation mechanical fuel pumps. These pumps are engineered and offered to car enthusiasts who work closely with older, well-maintained vehicles. The in-line pumps are driven by the camshaft, which effectively transfers fuel from the tank to the carburetor.

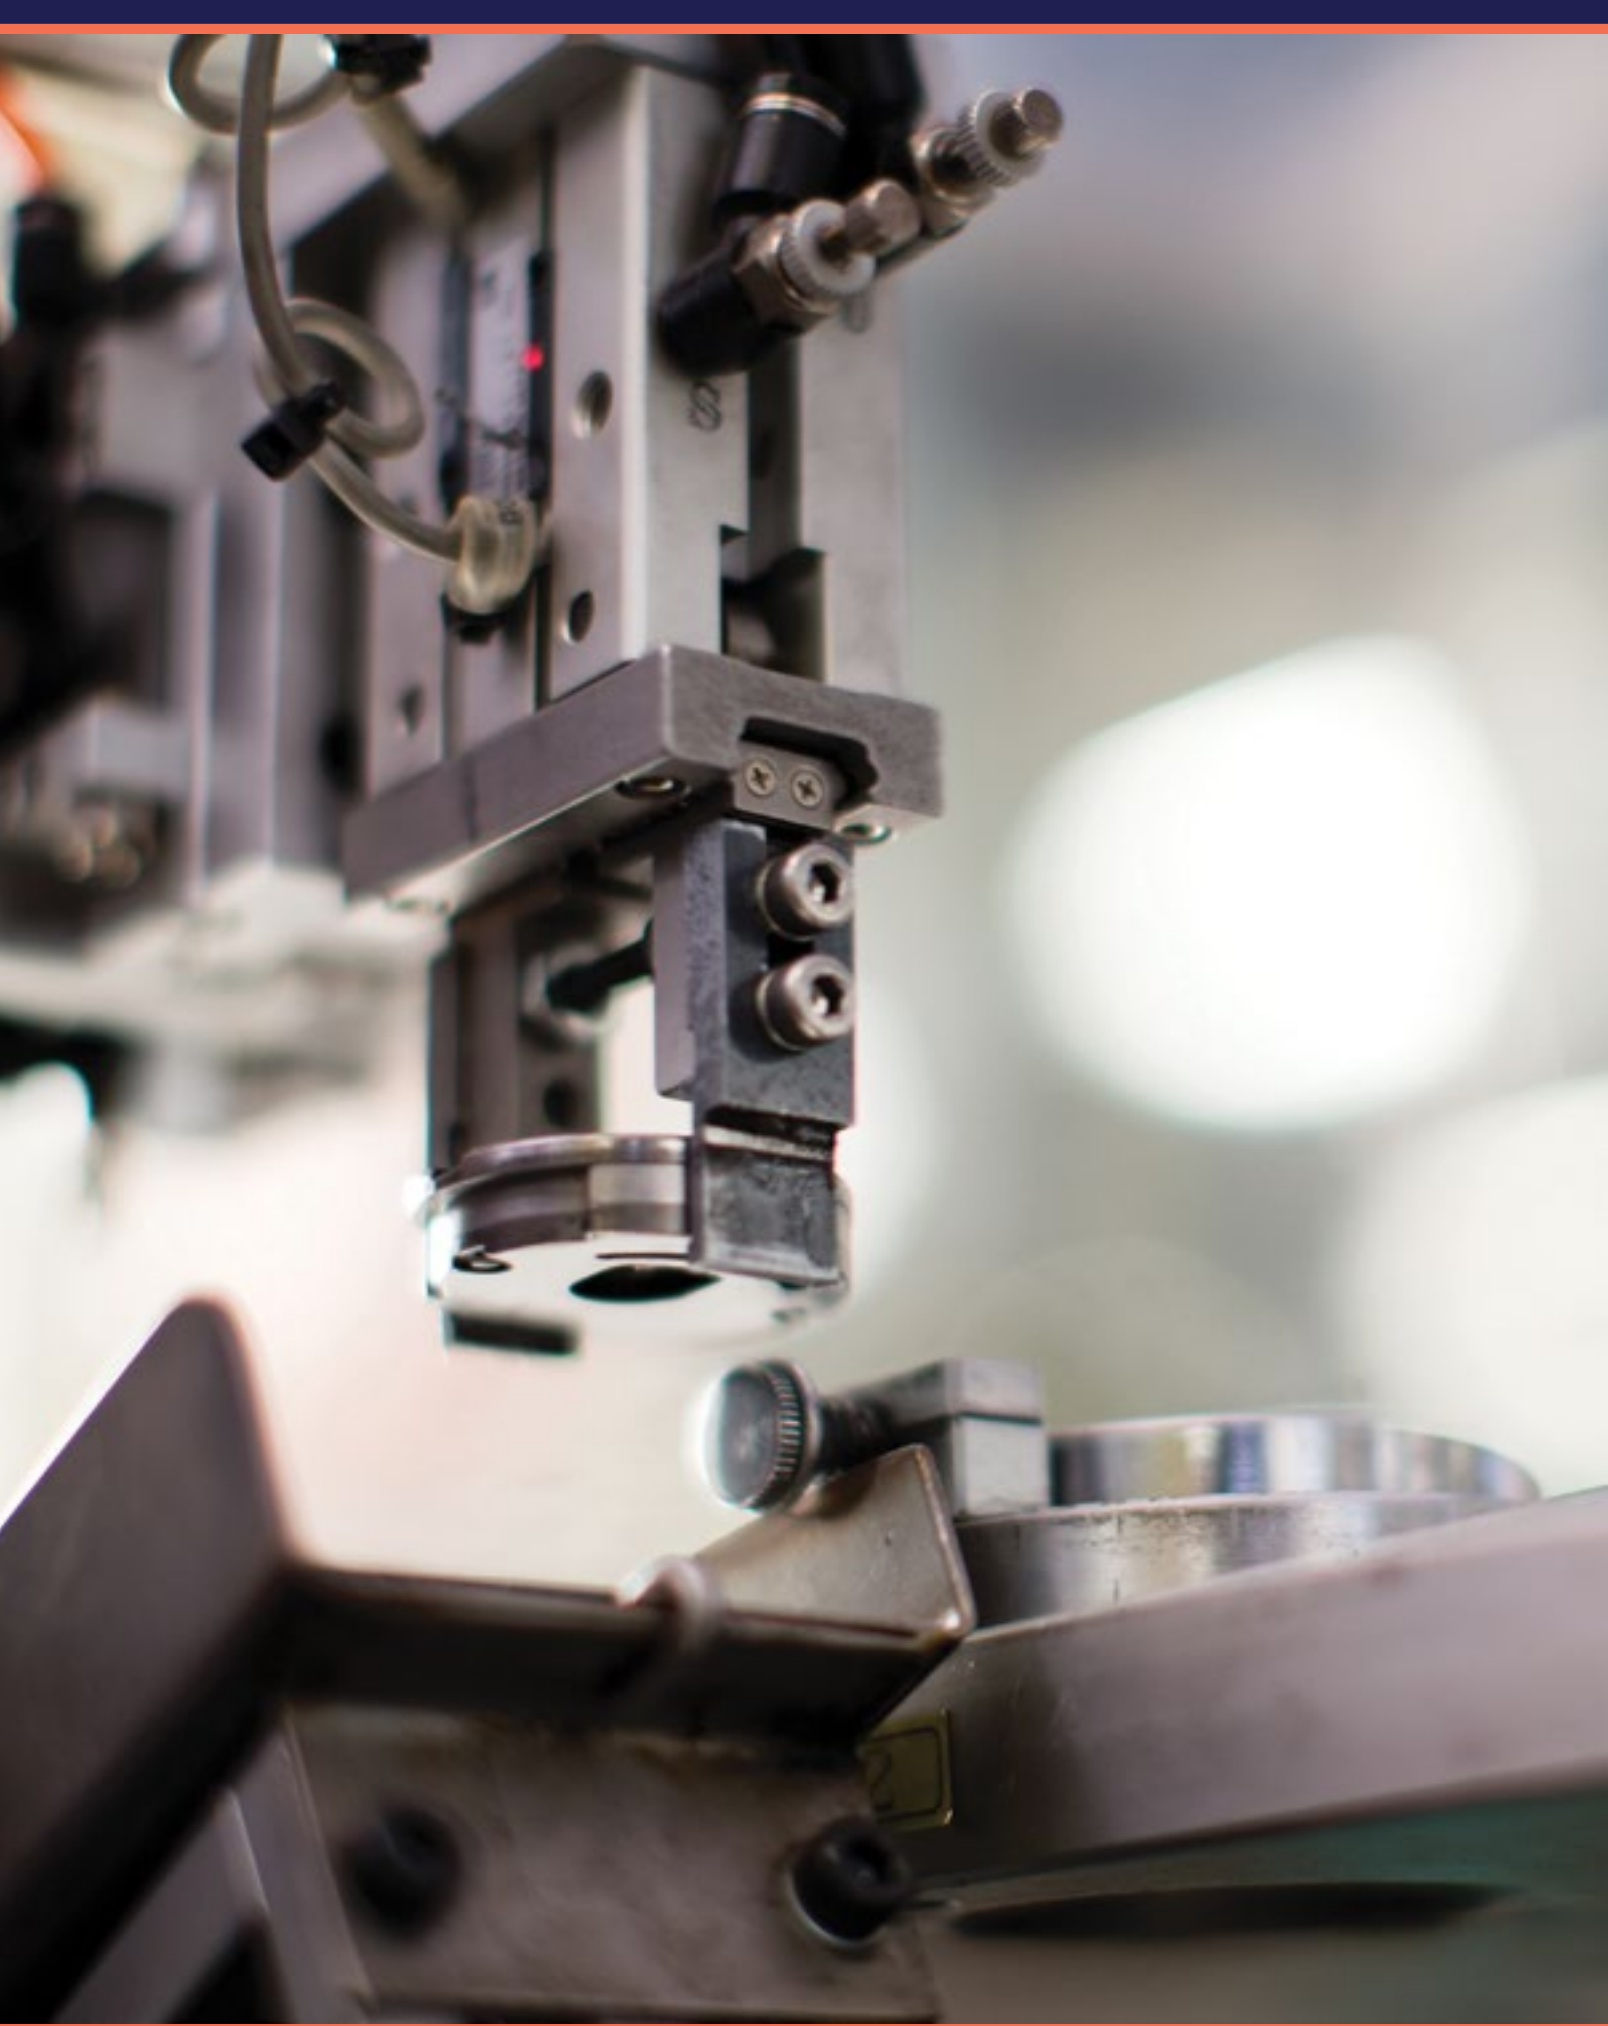

- 100% factory tested and approved
- Ideal for vehicles with low fuel pump pressure averaging between 4 to 6 PSI
- Less susceptible to contaminants because it's located outside the fuel tank

Carter mechanical fuel pumps are suitable primarily for carbureted engines for vehicles in operation prior to 1980 with fuel pump pressure averaging between 4 to 6 PSI.

Engine cylinder capacity	4-10 cylinders, based on catalog application
Peak pressure	6 PSI maximum pressure, 6-8 PSI maximum static pressure
Weight	Approximately 0.3-1.0 kg

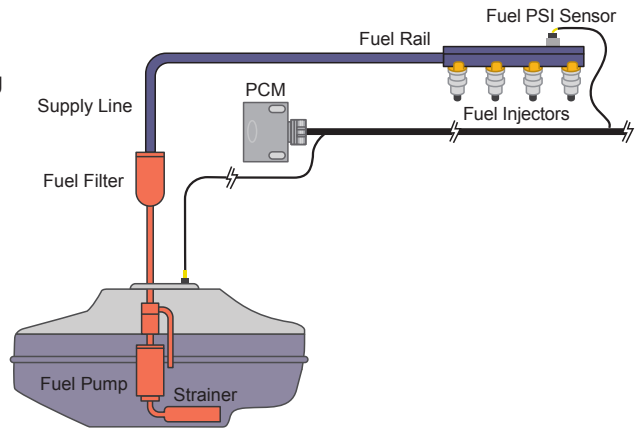

# ELECTRICAL FUEL PUMPS AND PUMP KITS

Carter offers a robust kit that ensures everything required for proper fuel pump installation is right in the box. The electrical in-tank fuel pumps and kits include the following components:\*

- Fuel pump
- Strainer
- Wire harnesses
- Tank seal
- Grommets

Turbine technology\* for electrical in-tank fuel pumps is likewise available to improve fuel flow, lower current strain and meet specified engine requirements.

- 100% factory tested and approved
- Ideal for vehicles with fuel pump pressure between 45 to 60 PSI
- Offered in a variety of configurations, depending on vehicle need

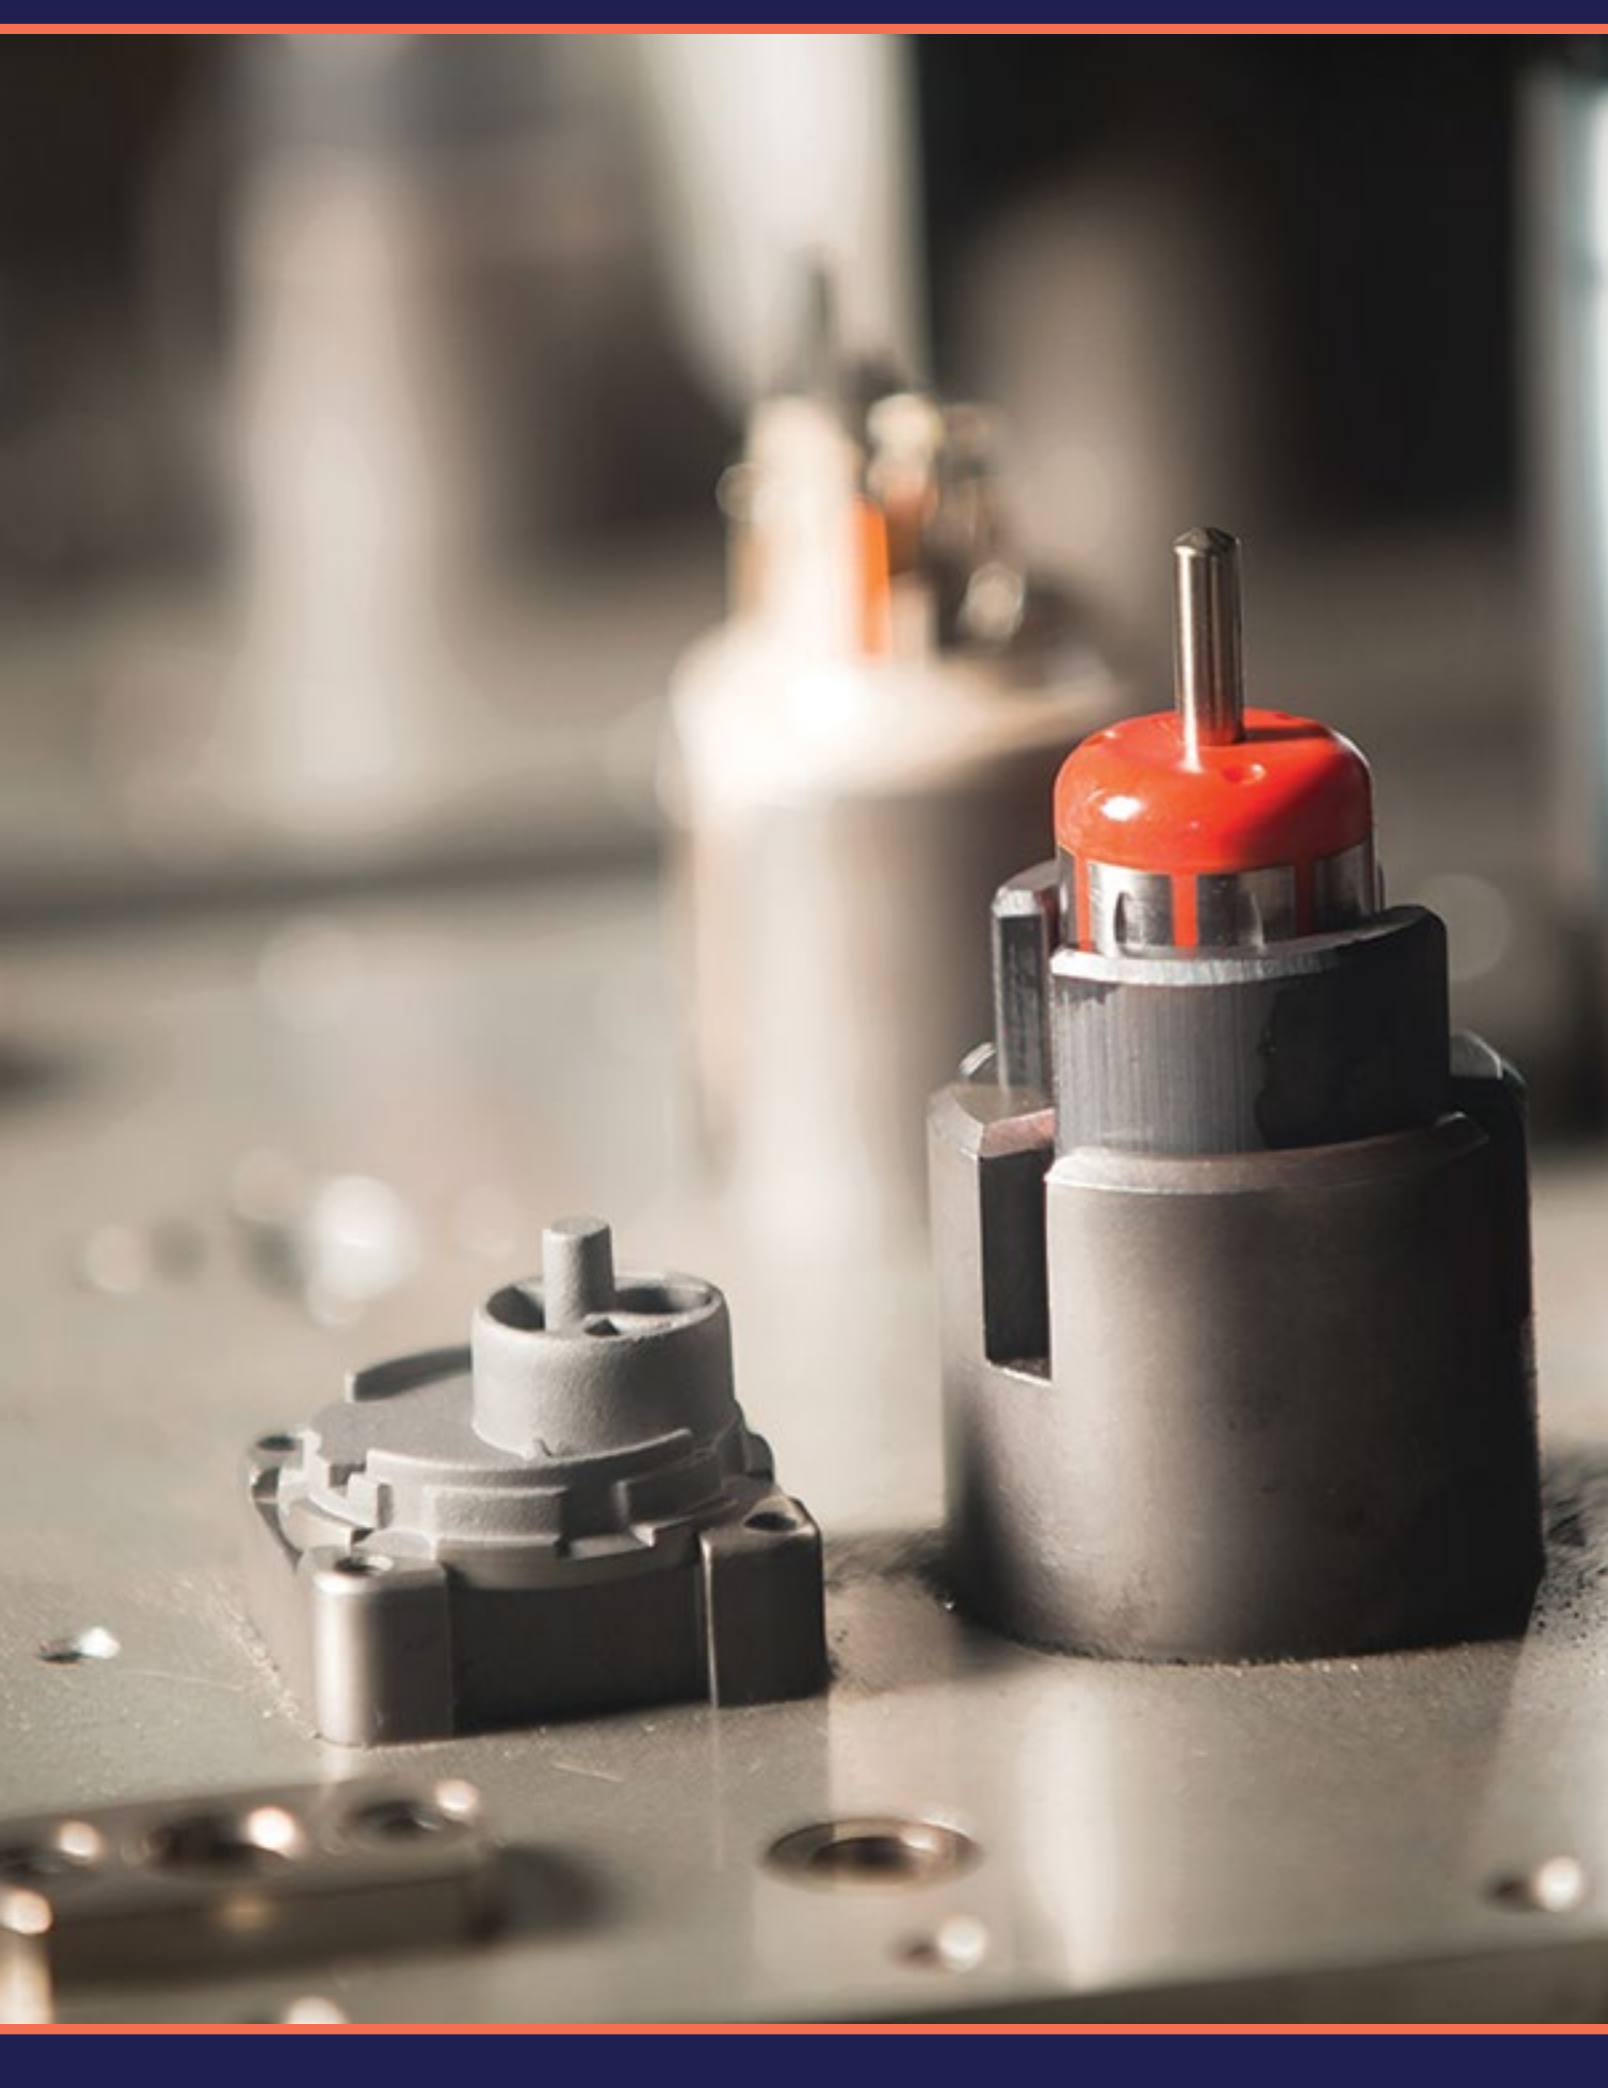

Carter electrical in-tank fuel pumps and kits are offered for marine, off-road and passenger car applications.

In addition to in-tank electrical fuel pumps, Carter offers in-line electrical fuel pumps in a range of configurations, which meet the needs of vehicles where fuel pump pressure does not exceed 15 PSI.

Engine cylinder capacity	4-10 cylinders, based on catalog application
Peak pressure	60 PSI maximum pressure,* 130 PSI maximum static pressure
Weight	Approximately 1-3 kg
Drive voltage	13.5VDC typical

\*Application specific

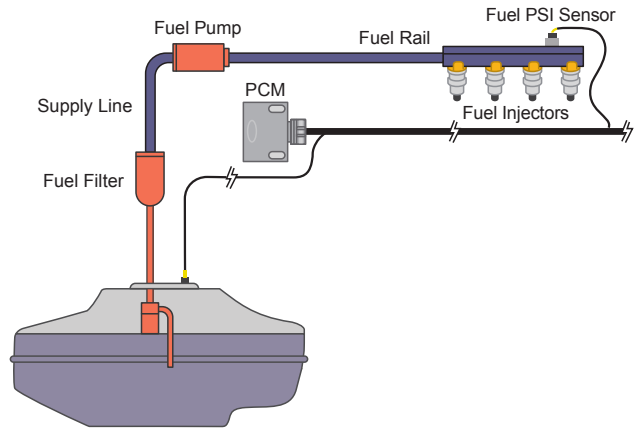

# UNIVERSAL FUEL PUMPS

Carter offers universal fuel pumps in a range of configurations, including rotary vane, gerotor and solenoid, which meet the needs of vehicles where fuel pump pressure does not exceed 15 PSI.

- 100% factory tested and approved
- Offered in a variety of applications, depending on vehicle need

## UNIVERSAL PUMP GUIDELINES

The universal fuel pump should be mounted below the fuel tank, as all fuel pumps do not have equal lift capabilities. Also, the pump must be mounted below the carburetor to avoid possible vapor lock conditions occurring. Under no circumstances should the pump be mounted in the trunk, inside the vehicle, or in the engine compartment; personal injury could occur in the event of fuel line rupture.

Always mount a good quality fuel filter on the inlet side of the pump. Failure to do so will void the warranty. **Do not mount the pump near exhaust system components, as heat contributes to vapor lock.** Care should be exercised to protect the pump from splash or water immersion.

Engine cylinder capacity	4-8 cylinders, based on catalog application
Peak pressure	7 PSI maximum system pressure,* 16 PSI maximum static pressure
Weight	Approximately 0.4 – 1.2 kg
Drive voltage	13.5VDC Typical, 24VDC for some universal applications

\*Application specific

# FUEL PUMP ASSEMBLIES

In response to a growing need in the automotive industry, Carter offers fuel pump assemblies for vehicles with pressures between 45 to 60 PSI.

- 100% factory tested and approved
- A seamless repair kit for installers seeking OE fit, form and function
- Features exclusive CleanScreen™ technology

## CARTER FUEL PUMP ASSEMBLIES ARE SUITABLE FOR MARINE, OFF-ROAD AND PASSENGER CAR APPLICATIONS.

**Metal Clamps**  
Prevent blow-offs on the fuel supply hose

**Silver Alloy Buttons**  
Increase the life of the sender assembly

**Abrasion Sleeve**  
Helps protect supply hose from premature wear due to friction

**Over-Molded Armature**  
Reduces fuel flow turbulence

**Carbon Commutator**  
Eliminates oxidation and high electrical erosion

**Rubber Feet**  
Reduce noise and vibration during operation

**Guide Rod Springs**  
Exterior springs provide more durability as the assembly expands and contracts in the fuel tank

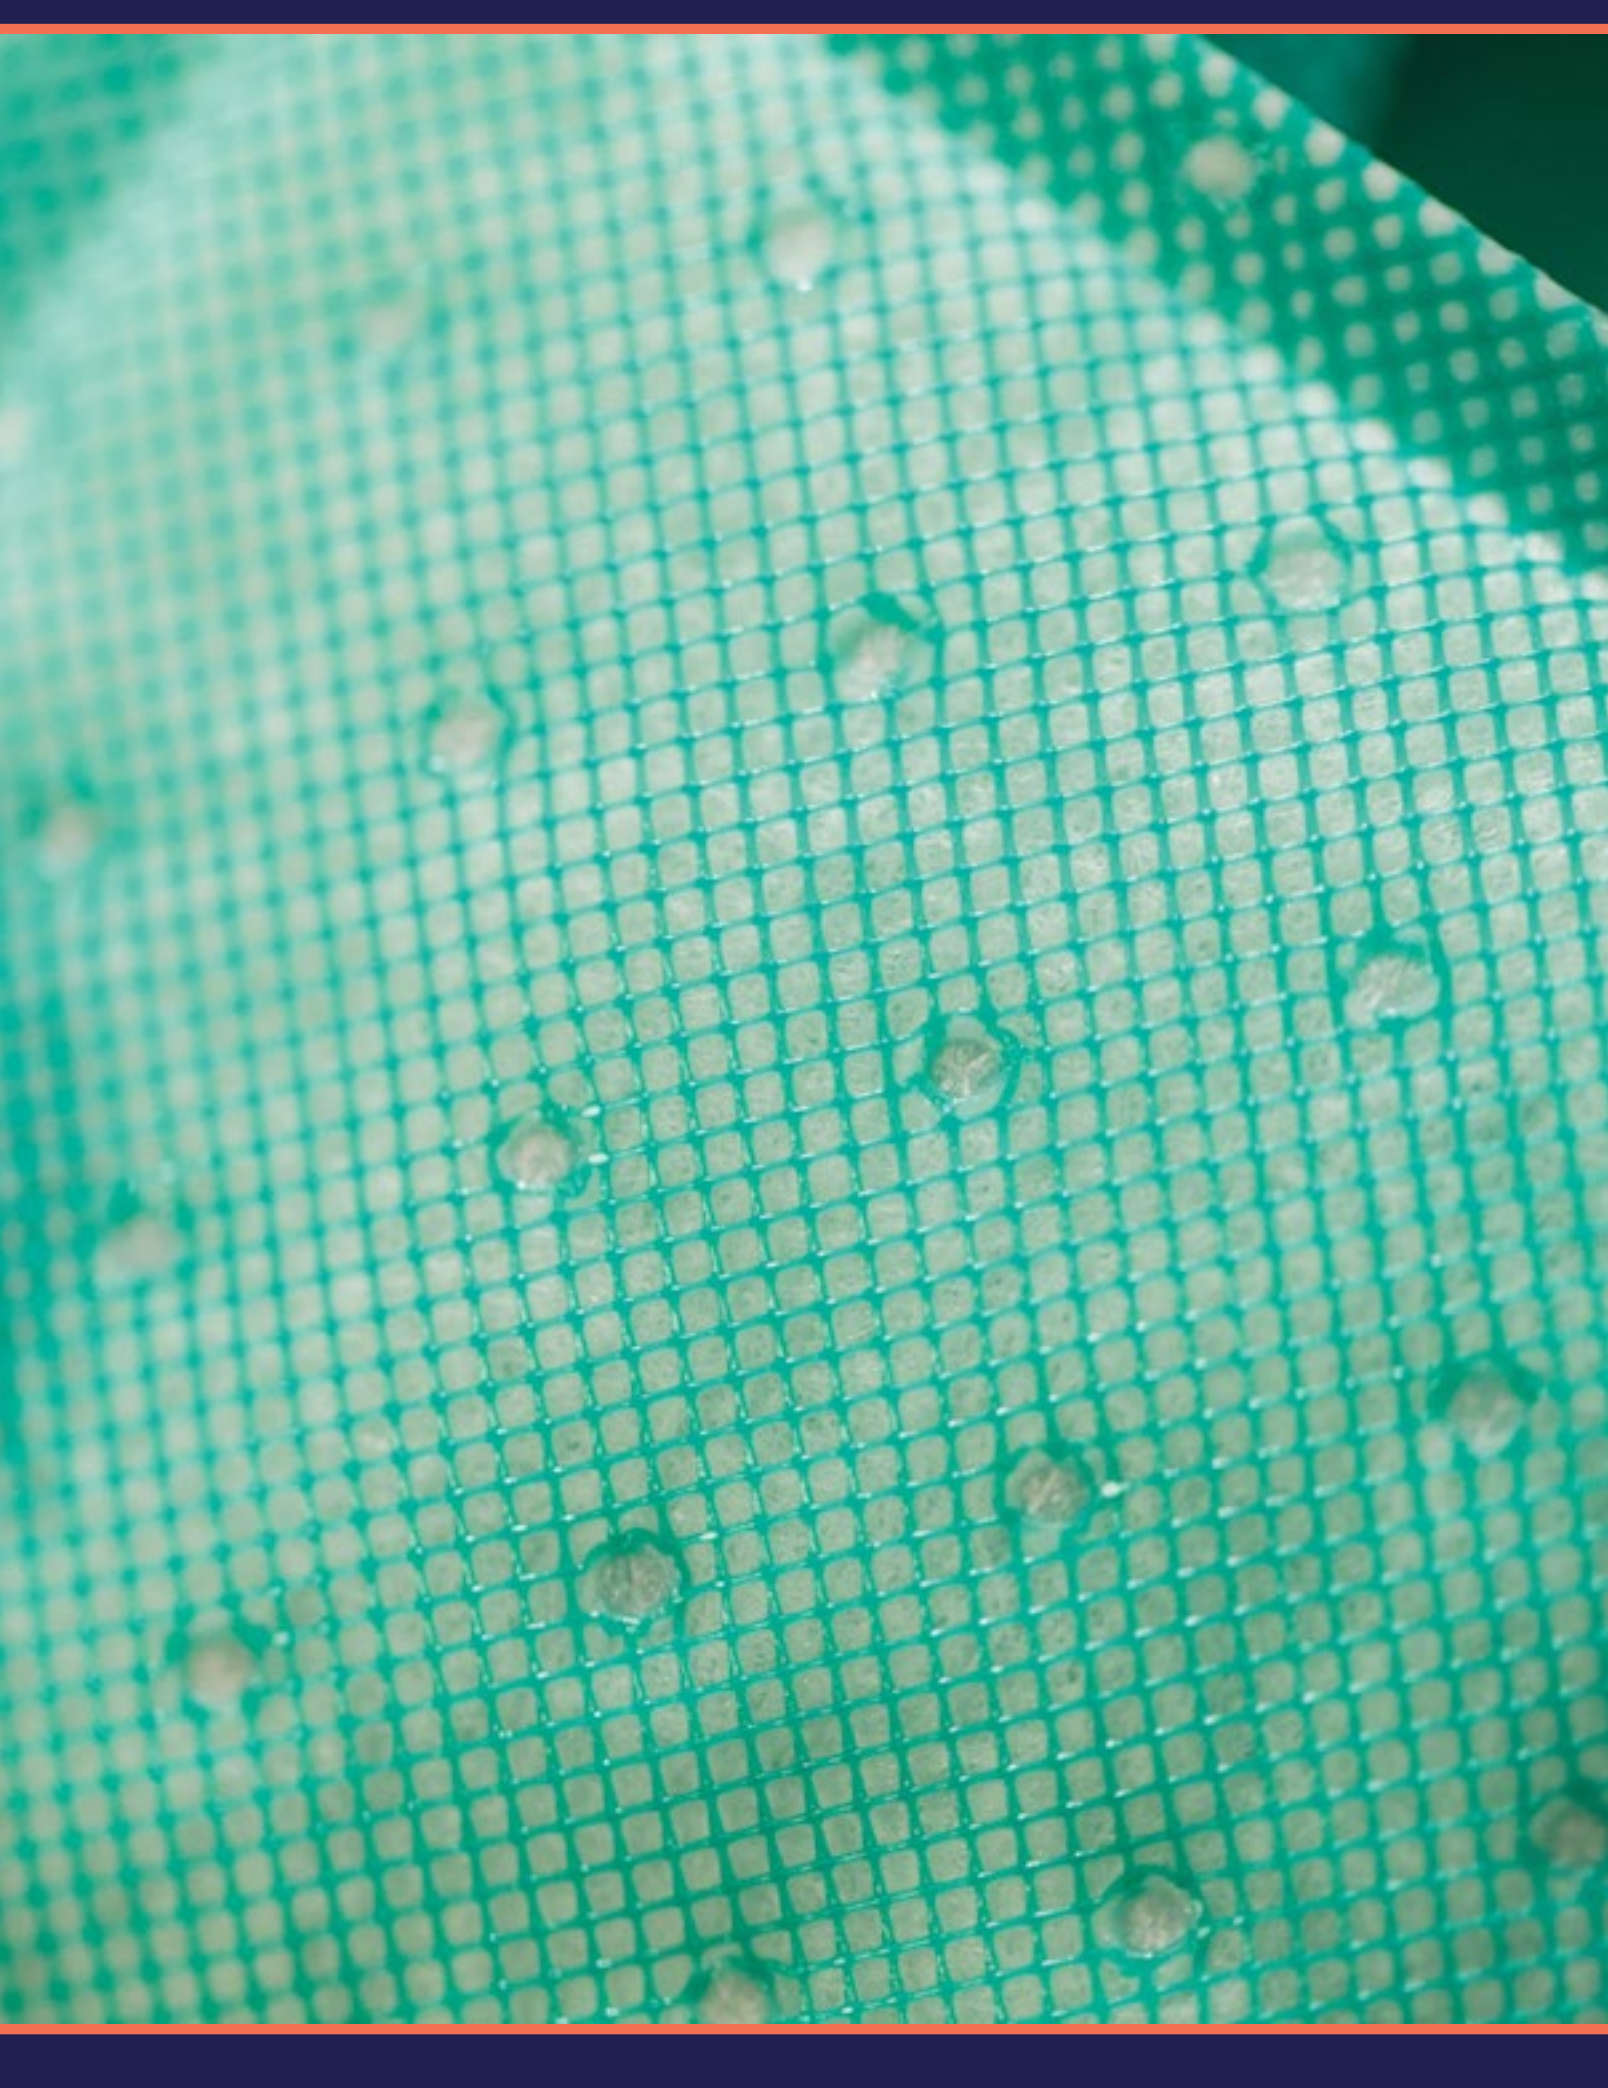

**Float Arm**  
Pre-mounted and calibrated to ensure proper fuel read

**CleanScreen™ Technology**  
Internal and external filtration provides 40% more dirt holding capacity

All above features and benefits are application specific.

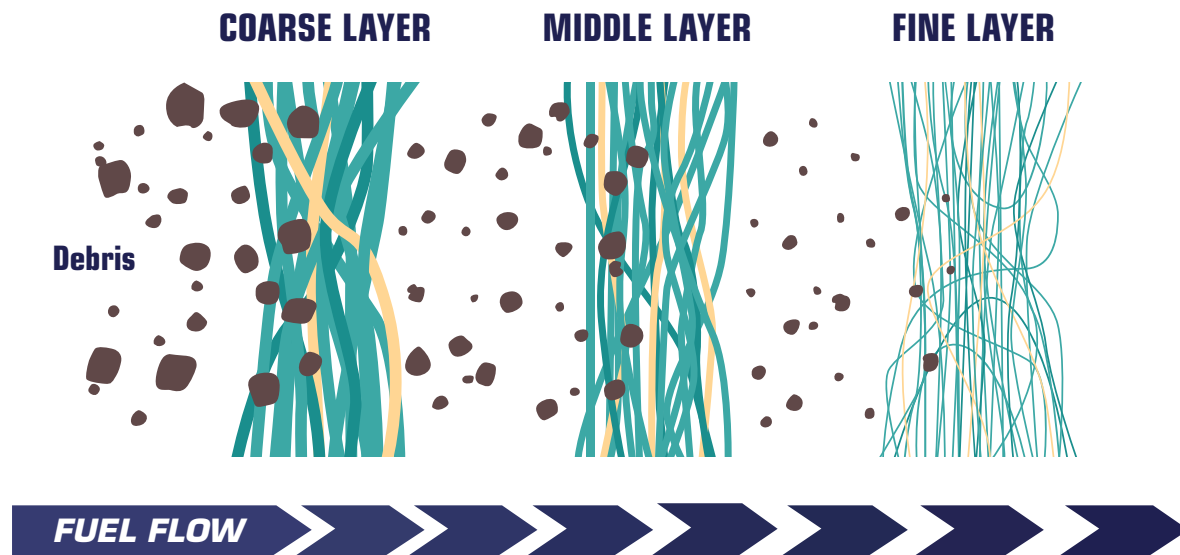

# CLEANSCREEN™ TECHNOLOGY

A clogged strainer, typically caused by a contaminated tank, can dramatically reduce fuel flow and lead to driveability issues. Too often, the technician assumes the problem is the fuel pump rather than the strainer and fails to correct the contamination problem.

Carter exclusively provides CleanScreen™ technology\* to better trap these finer particles with multi-layer internal and external strainers, offering 40% more dirt-holding capacity.\* This design increases fuel pump life in dirty fuel environments and is less prone to clogging — offering improved performance.

**40%  
MORE**  
DIRT-HOLDING  
CAPACITY\*

**CONTAMINATED FUEL IS THE LEADING  
CAUSE OF FUEL PUMP FAILURE.**

\*Application specific
