TREAD DEPTH HEALTH

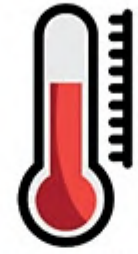

The tread depth of the tire is a critical component of driving safety and performance. The tread supports the ability to grip the road, accelerate, brake and also fuel economy.

Screen Features

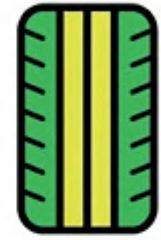

- + Tread depth condition provided per tire
- + Condition is re-evaluated automatically
- + Alerts and updates to for proactive maintenance and replacement of tires

EFFICIENCY & EMISSIONS

Save the environment and some cash by optimizing vehicle rolling resistance. These screens quantify the impact of inefficient tire maintenance.

Screen Features

- + Cost breakdown per tire
- + Quantifies fuel and tread wear loss
- + Quantifies excess carbon impact due to inefficiency

PRESSURE & TEMPERATURE

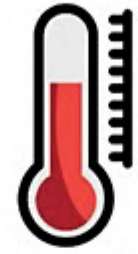

Ensure a safe, efficient and comfortable drive by monitoring the tire pressure and temperature conditions.

Screen Features

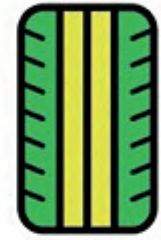

- + Individual tire condition details
- + Leak and low pressure notifications
- + Tire pressure visual alerts
- + Tire temperature visual color scale
- + Blowout Detection notifications

ADVANCED MODE

Optimize tire and vehicle performance with the Advanced Mode function.

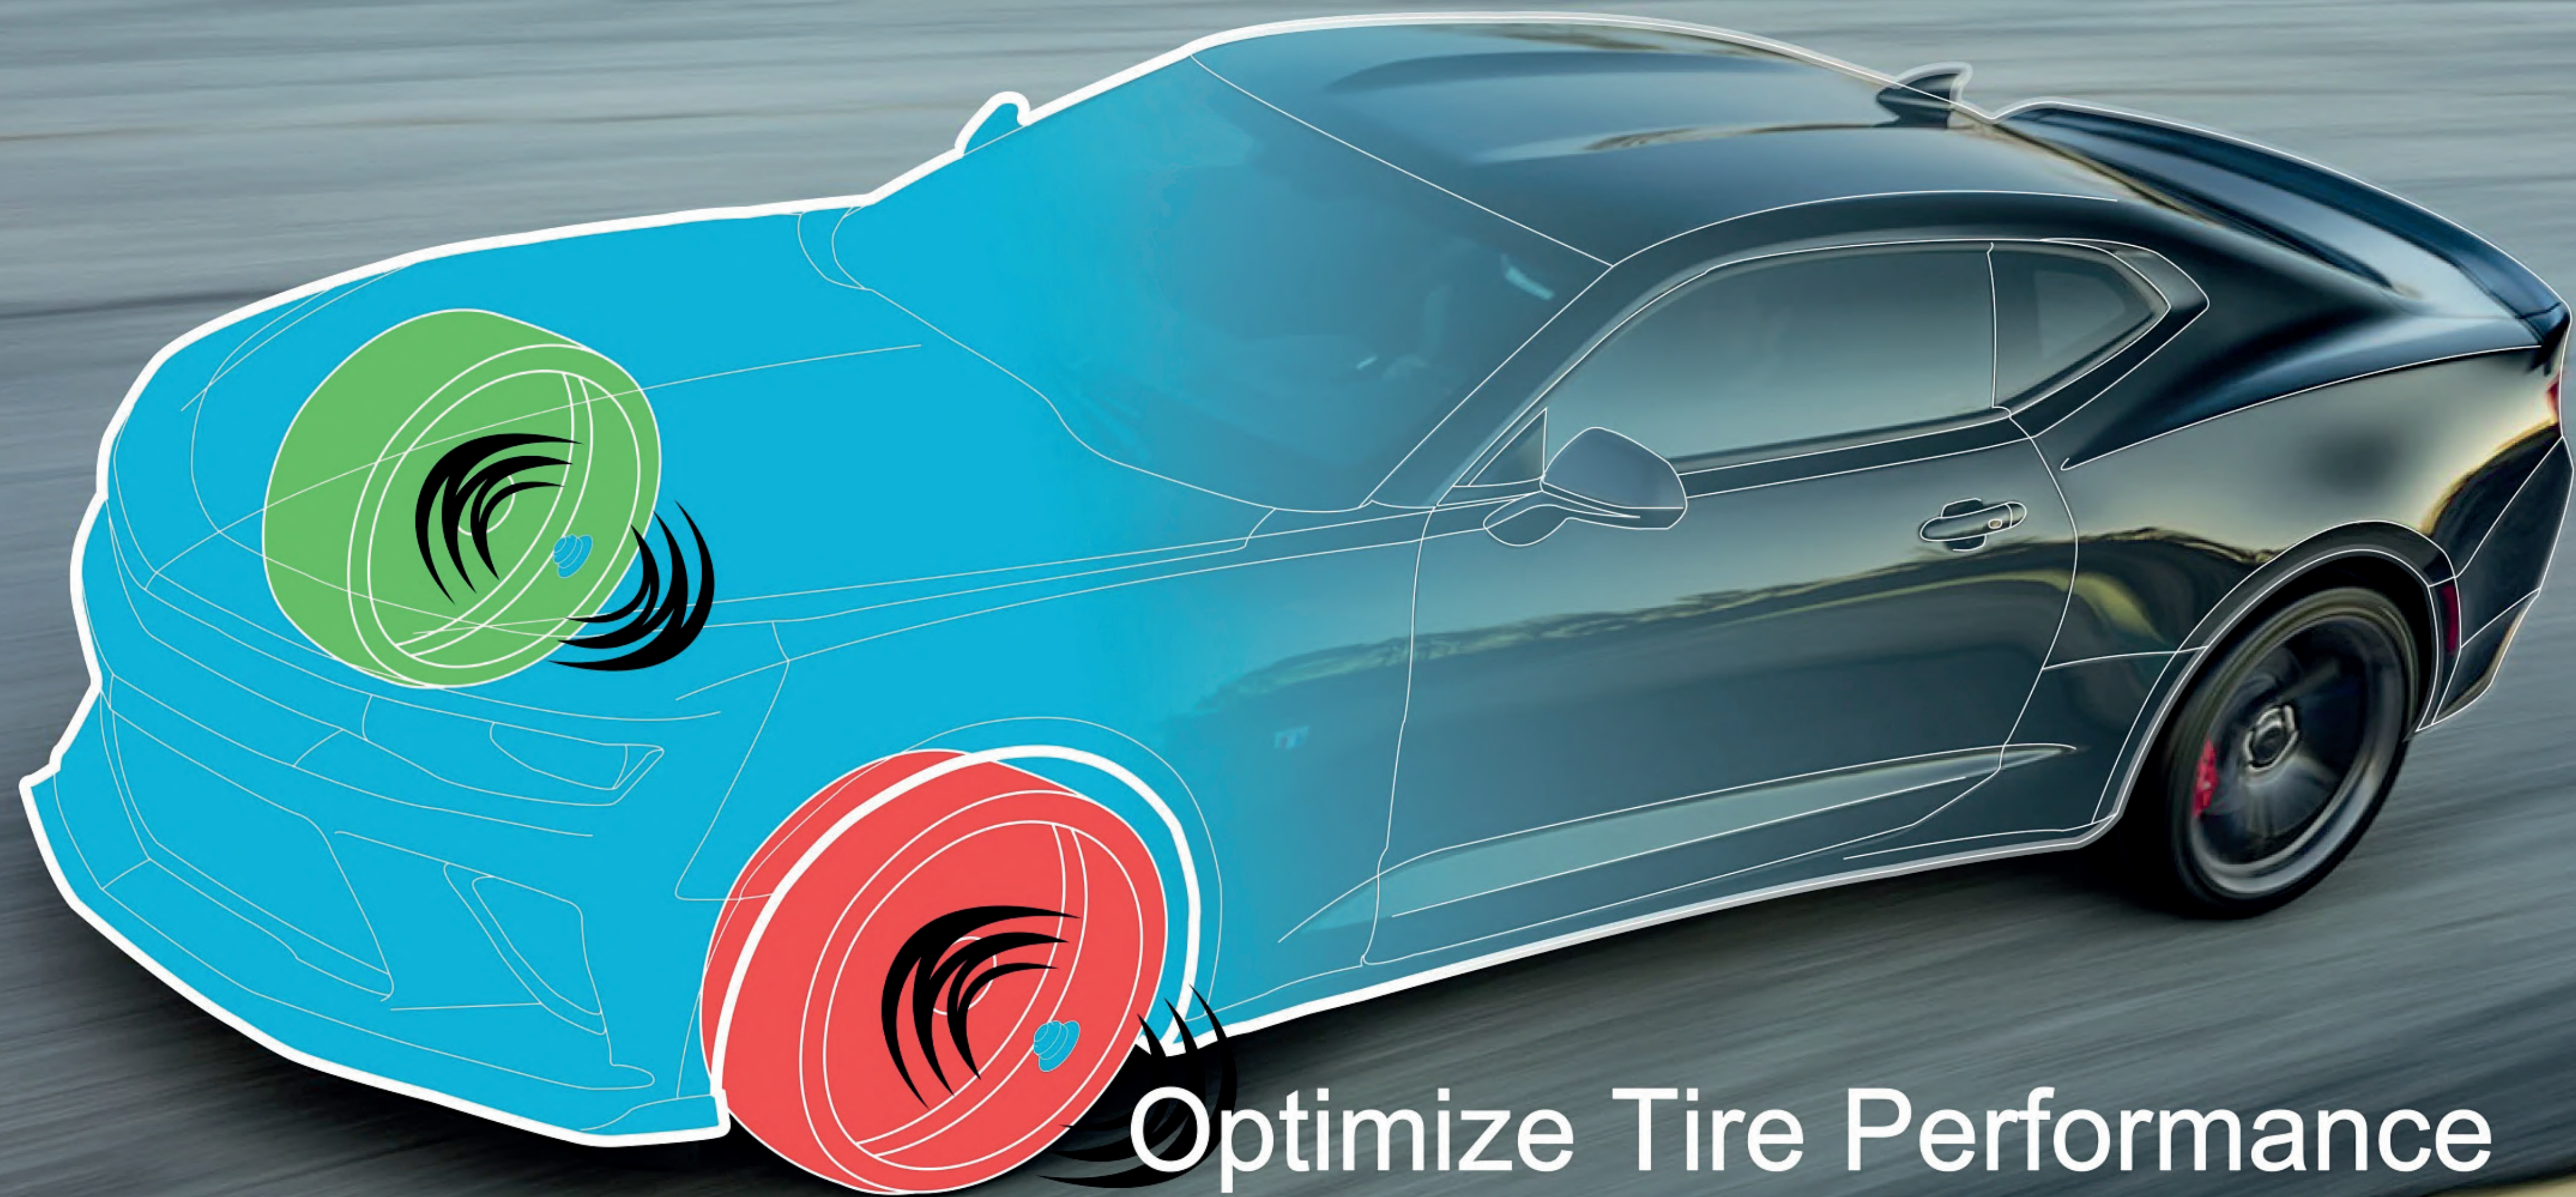

Screen Features

- + Record / share road and track runs
- + Session Details provides detailed info for saved runs
- + Track GPS location and corresponding temperatures and pressure conditions
- + Pressure adjustment recommendations

Protect What Matters Most
Leak & Blowout Detection prevent critical tire failure.

Optimize Tire Performance

Advanced Mode records sessions and provides recommendations.
