Ford 6.7L Injector Notes

DTech injectors for Ford 6.7L applications include the hold down bolt and high pressure line, as do the injectors from Ford.

The hold down bolt is included to eliminate the issue stretched bolts can cause when they are reused.

The high-pressure lines on the Ford 6.7L must be replaced with new anytime they are loosened or removed. Failure to replace a line will result in fuel leaks.

These remanufactured Piezo-style fuel injectors are cylinder specific when using the included fuel line. The injector itself can be used in any cylinder; you will just need to use the appropriate fuel line for the cylinder.
