Cooling System Leak Repair Products

Sealing Pesky Leaks

Cooling System gaskets consist of:

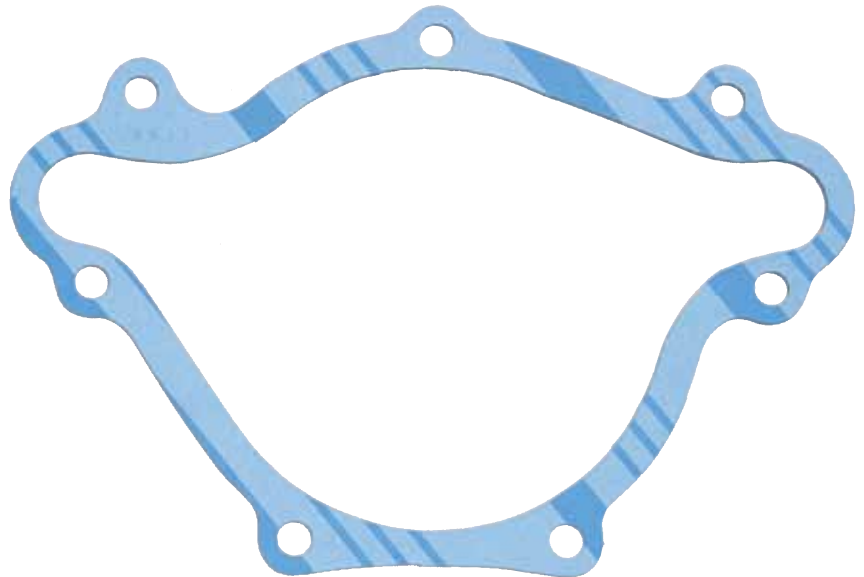

- Water outlet and thermostat housing gaskets
- Water pump mounting gaskets

Since water outlet and thermostat housing gaskets are more often replaced – and more difficult leakers – a specific page is also devoted to them.

Water pump gaskets should be replaced when the water pump is being serviced. These gaskets are included in many Timing Cover Sets (TCS), but are also available separately. They are typically made of proprietary Blue Stripe® high-density, high-quality paper material. Their density balances good internal sealability, wick resistance, and conformability. Water pump gaskets are listed separately in the Fel-Pro catalog entry.

Water Outlet and Thermostat Gaskets
