B BODY RIGHT FRONT BRAKE LINE IDENTIFICATION

TYPE 1

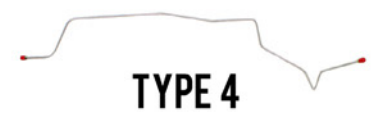

TYPE 2

66 cars only.
Line rises about 4 1/2" above the bell
housing area of the firewall.

66 cars only.
Line runs fairly straight across firewall
to right side.

TYPE 3

TYPE 4

67 cars.
Clips under steering column, rises 4
1/2" above the bell housing.

67 cars.
Clips under the steering column, then
runs fairly straight across firewall to
right side.

TYPE 5

TYPE 6

67-70 cars.
Clips to inner fender, rises 4 1/2"
above the bell housing area, then
routes over the frame rail to the hose.

69-70 cars.
Clips to inner fender, rises 4 1/2"
above the bell housing area, then
routes under the frame rail to the hose.

TYPE 7

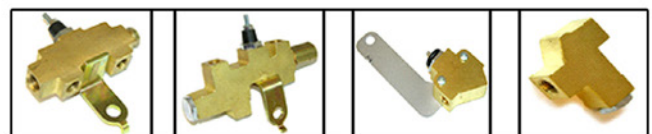

UNDER

OVER

69-70 disc brake cars only!
Clips to inner fender, rises 4 1/2" above
the bell housing area, then routes
under the frame to the hose.

Type 6 & 7 lines route under the frame,
then back up to the flex hose on the
passenger's side, while all of the other
lines route over the frame,
through the splash guard.

Q. Stainless Steel or Original Material, what should I buy?

A. Frankly, it's buyer's choice! If you plan to sell your car with in a few years, then Original Material is probably your best bet. The lines will look nice for 2 to 5 years depending on how your car is cared for. Stainless steel only looks better long term. However, if you plan to keep your car long term, say more than 5 years, then Stainless Steel will still look like new! Don't fool yourself by thinking that adding clear coat paint will be just as good. The cost difference is minimal compared to the annual maintenance.

Q. Will my new Stainless Steel lines leak? I've heard they are harder to seal.

A. Stainless Steel lines ARE harder to seal, particularly when they are being installed in a used component. Stainless material is harder than the original material, and lacks the soft lead/tin coating. The seat in a used valve or other used part usually has an impression left by the original flare. The harder Stainless material does not conform as easily to the old impression. By following a few simple extra steps this problem can be virtually eliminated. We recommend the use of "Permatex #14a Thread Sealant with Teflon". This product comes in a small tube and is available at most hardware stores. A dab placed on the tube under the fitting and a dab on the threads will usually eliminate any sealing problems.

Q. I don't see my car listed, can you help me?

A. YES! (usually) We have an extensive library of original lines from cars that we don't offer as regular production items. These can be made to order custom for you. If we do not have the patterns you need, you can supply the original lines from your car. In most cases we can duplicate them for you. Call us!

Q. What is a C.N.C. Bender? Does Fine Lines use C.N.C. Benders?

A. "C.N.C." stands for "Computer Numerical Control". Basically, it is a machine controlled by a computer using numerical coordinates to make parts.

Yes, we do use C.N.C. benders! However, not every line can be produced by a C.N.C. Nothing listed in this book is ever "hand bent". Our other bending machines are specially designed by Fine Lines, and custom built to accurately reproduce the type of parts that we make. We have found our machines to be more flexible, and sometimes more efficient for producing short runs of a wide variety of our type of parts.

Q. Can I order parts online?

A. Yes. All of our products are available for purchase at

ZFC6401	64-67	Disc brake caliper lines for factory installed Kelsey-Hayes 4-piston calipers, left & right (These lines are included with applicable front kits above)

67 EARLY OR LATE PRODUCTION?

Early Production:

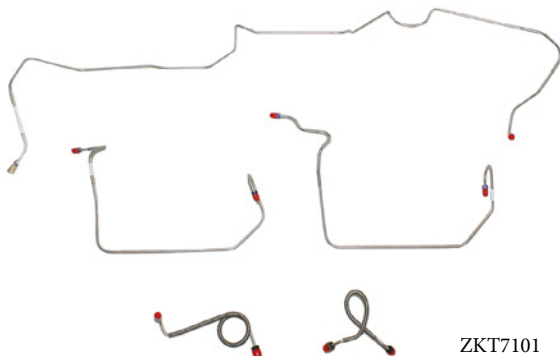

Generally cars made before 2/1/67. The right front crossover brake line is routed above the steering column.

Early cars used a one piece intermediate fuel line which is routed down the tunnel.

Late Production:

Generally cars built after 2/1/67. The right front crossover brake line is routed below the steering column.

Late cars have a two piece intermediate fuel line which runs out near the rocker panel.

1967 Fairlane

The intermediate brake line for 1967 cars with drum brakes runs from the valve, across the firewall to the passenger's side, then to the rear of the car all in one piece. The line is much longer than any of the other intermediate brake lines listed.

1989

CAMARO OWNERS

THE BRAKE PROPORTIONING VALVE USED ON THE 89 CARS WAS MODIFIED MID WAY THROUGH 1989.
THE NEW VALVE APPEARED IDENTICAL, BUT THE THREAD PITCH WAS CHANGED.
THE ONLY WAY TO KNOW WHAT YOU HAVE IS TO LOOSEN THE MASTER CYLINDER LINES AND CHECK THE FITTINGS!

The 66 Nova used two different routings for the intermediate brake line.

On standard cars the line route down the tunnel from front to back.

On cars with Dual Exhaust, the line was routed out toward the frame rail to avoid the dual exhaust system.

FKT8902	89*-92	V8, 2nd design valve*, 4 lines

*1989 first design valve uses fine (M1) metric threads, Second design uses course (M1.5) threads.

1989

FIREBIRD & TRANS AM OWNERS

THE BRAKE PROPORTIONING VALVE USED ON THE 89 CARS WAS MODIFIED MID WAY THROUGH 1989. THE NEW VALVE APPEARED IDENTICAL, BUT THE THREAD PITCH WAS CHANGED. THE ONLY WAY TO KNOW WHAT YOU HAVE IS TO LOOSEN THE MASTER CYLINDER LINES AND CHECK THE FITTINGS!

Q. Stainless Steel or Original Material, what should I buy?

A. Frankly, it's buyer's choice! If you plan to sell your car with in a few years, then Original Material is probably your best bet. The lines will look nice for 2 to 5 years depending on how your car is cared for. Stainless steel only looks better long term. However, if you plan to keep your car long term, say more than 5 years, then Stainless Steel will still look like new! Don't fool yourself by thinking that adding clear coat paint will be just as good. The cost difference is minimal compared to the annual maintenance.

Q. Will my new Stainless Steel lines leak? I've heard they are harder to seal.

A. Stainless Steel lines ARE harder to seal, particularly when they are being installed in a used component. Stainless material is harder than the original material, and lacks the soft lead/tin coating. The seat in a used valve or other used part usually has an impression left by the original flare. The harder Stainless material does not conform as easily to the old impression. By following a few simple extra steps this problem can be virtually eliminated. We recommend the use of "Permatex #14a Thread Sealant with Teflon". This product comes in a small tube and is available at most hardware stores. A dab placed on the tube under the fitting and a dab on the threads will usually eliminate any sealing problems.

Q. I don't see my car listed, can you help me?

A. YES! (usually) We have an extensive library of original lines from cars that we don't offer as regular production items. These can be made to order custom for you. If we do not have the patterns you need, you can supply the original lines from your car. In most cases we can duplicate them for you. Call us!

Q. What is a C.N.C. Bender? Does Fine Lines use C.N.C. Benders?

A. "C.N.C." stands for "Computer Numerical Control". Basically, it is a machine controlled by a computer using numerical coordinates to make parts.

Yes, we do use C.N.C. benders! However, not every line can be produced by a C.N.C. Nothing listed in this book is ever "hand bent". Our other bending machines are specially designed by Fine Lines, and custom built to accurately reproduce the type of parts that we make. We have found our machines to be more flexible, and sometimes more efficient for producing short runs of a wide variety of our type of parts.
