

STARTUP SEQUENCE

These headlights are packed with the latest and most modern lighting functions, including a startup or “welcome” sequence. Anytime the running lights turn on, they will illuminate in a two-stage chasing sequence that is sure to turn heads, with an ultra-premium look.

MORE AGGRESSIVE APPEARANCE

Your 2016-2023 Toyota Tacoma deserves an upgrade, and Sequential LED Headlights from Form Lighting are the perfect way to do it. With these premium OE-grade replacements, you’ll add triple bi-LED projectors, sequential turn signals, startup sequence, LED running light, and a more aggressive, modern appearance.

SEQUENTIAL TURN SIGNAL

The startup sequence isn’t the only thing that stands out. These headlights also feature a sequential switchback LED turn signal. Every time the turn signal is activated, amber LEDs activate across the top of the running light in a smooth, chasing sequence. When you’re finished making your turn, they automatically “switch back” to the bright white DRL.

TRIPLE PROJECTORS

What’s better than one projector? Three projectors. And in these headlights, all three are bi-LED units, providing output for both low beam and high beam illumination. With a sharp cutoff, broad width, and high intensity, these units provide a serious upgrade in output.

OEM-GRADE CONSTRUCTION

Form Lighting headlights are built with quality in mind, using OE-grade materials and design techniques. This includes durable UV-coated polycarbonate lenses, automotive-grade LED emitters, breather vents, and OEM plug-and-play connectors. They are assembled in an IATF 16949-certified facility, which is a quality management system designed for the automotive industry. While they may not be the cheapest option you’ll find, you can rest assured that these lights will provide durable and superior performance.
