Determining the Correct Product for a Vehicle

Because we build our catalog information by make, year, model and engine the following steps are necessary:

1 Determine the correct make.

2 Determine the year.

3 Determine the model.

4 Determine the engine.

5 Footnote explanations are located at the bottom of the page on which they appear.

Vehicle Engine Identification

In some vehicles, there are two or more engines that are of the same size but do not use the same products.

To identify the proper product for your vehicle, you must match the engine code from your vehicle identification number with the character listed in our Application Section.

For vehicles manufactured by Chrysler, Ford, GM or Saab from 1972 to 1980, use the fifth character. For vehicles manufactured by Chrysler, Ford, GM or Saab from 1981 to 2016, use the eighth character.

For vehicles manufactured by Mitsubishi from 1983 to 2016, use the eighth character.

For vehicles manufactured by AMC/EAGLE (except Jeep) from 1972 to 1980 use the seventh character, from 1981 to 1988 use the fourth character, and 1989-1998 use the eighth character.

For vehicles manufactured by Jeep from 1972 to 1974 (up to SN #100000), use the eighth character, from 1974 to 1980 use the seventh character, from 1981 to 1988 use the fourth character, and from 1989-2016 use the eighth character.

For vehicles manufactured by AM General from 1995 to 2016 use the fourth character.

For vehicles manufactured by Hyundai - Mazda from 1981 to 2016 use the eighth character.

For vehicles manufactured by Jaguar - Landrover from 1981 to 2016 use the seventh character.

For vehicles manufactured by Kia from 1994 to 2016 use the eighth character.

For vehicles manufactured by Nissan (except Quest) from 1995 to 2016 use the fourth character.

For vehicles manufactured by Subaru - Suzuki from 1981 to 2016 use the sixth character.

Automatic Transmission Filter Maintenance Information

When determining the correct FRAM® transmission filter for your vehicle, it is imperative that you identify the pan of your vehicles transmission with one of the pictures shown on the transmission identification chart in this section. Only then can you be assured that you have the proper transmission filter.

Automatic Transmission Filter and Fluid Changing is Important

Good preventive maintenance can prevent most automatic transmission problems. The best maintenance is simply – ***change the transmission filter and the fluid together.***

Most automatic transmission failures are caused because the filter and fluid aren't changed every other year when driving under severe conditions*.

The transmission fluid acts as both a lubricant and a coolant. Additives help combat oxidation and foaming while preventing deterioration of rubber seals and gaskets. In order to perform its function properly, transmission fluid must be kept free of harmful foreign particles, varnish and sludge. Moving parts cannot be properly lubricated if valves and lines are even partially obstructed. The resulting heat build-up can lead to eventual complete transmission failure. Even the best fluid needs periodic changing. Normal wear of moving parts and frequent periods of excessive heat will cause contamination and varnish build-up. FRAM® automatic transmission filters trap foreign particles and abrasives from the fluid. The filter will, however, eventually become clogged and will no longer be able to protect the transmission. To prevent transmission failure, change ***both the filter and the fluid before they become ineffective.***

Change the filter and fluid at recommended intervals or every other year if you drive under severe conditions*.

FRAM® filters are designed and manufactured to meet and/or exceed the vehicles manufacturers' specifications.

* Severe conditions include above average mileage; stop and go traffic; snowy, icy, dusty and dirty conditions; temperatures above 90°; hilly or mountainous terrain and towing.

Ford Motor Company

Transmission Identification Codes

Ford Motor Company identifies the transmission used on their vehicles by a code that is stamped on the vehicle identification plate attached to the driver's door or frame.

General Motors Automatic Transmission Identification Codes

Beginning in 1984 on GM passenger cars and in the early 70's on trucks there is a label where the transmission can be identified. This label is usually found in the trunk of the vehicle

- (1) on the deck lid;
- (2) on the spare tire cover;
- (3) on the RH rear wheel well;
- (4) on rear quarter panel.

In some instances this label can be found inside the glove box door, front compartment LH fender well or on Corvette, under the rear floor panel compartment door or the front floor console door.

The RPO codes are listed alpha-numeric on the label. Simply locate the code corresponding to the code in the chart below and match this with the transmission. Then refer to the application section for the appropriate filters.

FRAM[®] RACING[™]

Fram[®] Racing Filters Take You To The Finish Line

Screen-over by-pass valve provides additional protection against larger contaminants

Heavy gauge steel tapping plate withstands high pressure flexing

Low-restriction racing media designed for high oil flow

Spiral-shaped centertube provides protection against collapse

FRAM Product Specifications

High Performance Oil Filter Adaptor Kits

HPK1

SPECIFICATIONS

- All required parts furnished.
- No external lines or fittings.
- Use HP1 or HP3 FRAM filter.
- Service gasket: SP226937

APPLICATION

- Use to convert bolt-on canister to spin-on, disposable-type filter on the following: 1956-67 Chevrolet V-8 265, 283, 327, 348, 350, 396, 409, 427 (except Chevy II V-8 283, 327 engines).
- Not for marine or diesel use.

HPK2

SPECIFICATIONS

- Inlet and outlet ports threaded to receive 1/2" pipe thread. Use with 3/8" I.D. suitable quality hose and fittings.
- Mounting bracket holes are .375" diameter. Three holes are provided.
- Use HP1, HP3, HP7 or HP10 FRAM filter.

APPLICATION

- Remote mount base to be used in conjunction with FRAM Engine Adaptor Kits HPK4, HPK5, HPK3320, HPK3321 or HPK3322. See applications of these adaptors.
- Can also be used in any external oil pressure line operating within the specification limits.
- Not for marine or diesel use.

FRAM Product Specifications

High Performance Oil Filter Adaptor Kits

HPK3

SPECIFICATIONS

- Inlet and outlet ports threaded to receive 1/2" pipe thread. Use with 3/8" I.D. or larger suitable quality hose and fittings.
- Mounting bracket holes are .313" diameter. Three holes are provided.
- Use two HP1, HP3, HP7 or HP10 FRAM filters.

APPLICATION

- Dual filter remote mount base. Designed to be used for higher flow rates with HPK4, HPK5, HPK3320, HPK3321 or HPK3322 engine adaptor kits.
- Not for marine or diesel use.

HPK4

SPECIFICATIONS

- All necessary mounting capscrews and gaskets provided. Inlet and outlet ports are threaded to receive 1/2" pipe thread. Use with 3/8" I.D. suitable quality hose and fittings.
- Service Gaskets: SP226936 & SP226937

APPLICATION

- Use in conjunction with FRAM adaptor kit HPK2 or HPK3 to convert from the bolt-on canister type to a remote mounted spin-on, disposable type filter on the following: 1956-67 Chevrolet V-8 265, 283, 327, 348, 350, 396, 409, 427 (except Chevy II V-8 283, 327 engines).
- Not for marine or diesel use.

FRAM Product Specifications

High Performance Oil Filter Adaptor Kits

HPK5

SPECIFICATIONS

- All necessary mounting hardware provided. Inlet and outlet ports are threaded to receive 1/2" pipe thread. Use with 3/8" I.D. suitable quality hose and fittings.
- Service Gasket: SP226938

APPLICATION

- Use in conjunction with FRAM adaptor kit HPK2 or HPK3 to provide remote mounting of a spin-on, disposable type filter. This kit is used on engines where the PH8A, PH16, PH43 and PH977A oil filters are listed in the application sections.
- Not for marine or diesel use.

HPK3320

SPECIFICATIONS

- All necessary mounting capscrews and gaskets provided. Inlet and outlet ports are threaded to receive 1/2" pipe thread. Use with 3/8" I.D. suitable quality hose and fittings.
- Service Gaskets: SP226936 & SP226937

APPLICATION

- Use in conjunction with FRAM adaptor kit HPK2 or HPK3 to convert from the bolt-on canister type to a remote mounted spin-on disposable type filter.
- Chevrolet V-8 engines through 1968.
- Not for marine or diesel use.

FRAM Product Specifications

High Performance Oil Filter Adaptor Kits

HPK3321

SPECIFICATIONS

- All necessary mounting hardware provided. Inlet and outlet ports are threaded to receive 1/2" pipe thread. Use with 3/8" I.D. suitable quality hose and fittings.

APPLICATION

- Use in conjunction with FRAM adaptor kit HPK2 or HPK3 to provide remote mounting of a spin-on, disposable type filter. This kit is used on engines where the PH11, PH25, PH3429 and PH3675 oil filters are listed in the application sections.
- Not for marine or diesel use.

HPK3322

SPECIFICATIONS

- All necessary mounting hardware provided. Inlet and outlet ports are threaded to receive 1/2" pipe thread. Use with 3/8" I.D. suitable quality hose and fittings.

APPLICATION

- Use in conjunction with FRAM adaptor kit HPK2 or HPK3 to provide remote mounting of a spin-on, disposable type filter. This kit is used on engines where the PH5, PH13, PH30, PH373 and PH8873 oil filters are listed in the application sections.
- Not for marine or diesel use.

FRAM Product Specifications

High Performance Oil Filter Adaptor Kits

HPK6

SPECIFICATIONS

- The horizontal mount requires retapping of block for installation. The offset is for modified oil pan clearance and is popular for sprint car applications or where headers won't interfere. This mount is tapped for oil pressure line.
- Use HP6 or HP6A FRAM filter.
- All necessary mounting hardware provided.

APPLICATION

- The direct mount 90° adaptor is for small and big block Chevrolet engines.

SP436646

SPECIFICATIONS

- Service part: SP436646
- Use with HPK6000.

APPLICATION

- 600 micron inspection screen for examination of contaminant trapped before reaching the oil filter.

FRAM Product Specifications

Fuel Filters

HPG1

SPECIFICATIONS

- Micron Rating: 5 Nominal
- Recommended Maximum Operating Pressure: 200 PSI
- Recommended Flow Rate: 45 GPH @ 0.2 PSI DP
- Recommended Maximum Flow Rate: 90 GPH @ 0.5 PSI DP
- No Relief Valve
- Thread Size: 3/8"-18 NPTF
- Mounting Bracket Provided: (2) 3/8" holes
- Head Gasket: SP101030
- Cap Screw Copper Gasket: SP100004
- Bottom Gasket: SP102835

APPLICATION

- For use on any engine requiring fuel flows up to and including 90 GPH. (Not for use with fuels containing nitro-methane.) Gasoline containing more than 10% alcohol including Ethanol and Methonal are not acceptable for use in this filter. Also, the HPG1/HPGC1 fuel filter is not acceptable in applications using 100% alcohol or nitro-methane.

HPGC1

SPECIFICATIONS

- Micron Rating: 5 Nominal
- Recommended Maximum Operating Pressure: 200 PSI
- Recommended Maximum Flow Rate: 90 GPH

APPLICATION

- Replacement cartridge for HPG1 filter.

Oil Change Accessories

Oil Filter Cup Wrench - Order SP1666

- Remove all popular easy-change oil filters.

Metal Oil Filter Cup Wrenches - Order SP3574

- To remove 3" diameter filters. (Fram and AC)

Metal Oil Filter Cup Wrenches - Order SP6663A

- To remove 65mm-14 and 67mm-14 diameter filters. (Two step design to fit Toyota/Nissan and Fram filters)

Metal Oil Filter Cup Wrenches - Order SP7097

- To remove 68mm-14 diameter filters. (Fits Ford and Mazda filters)

Oil Change Accessories

Oil Filter Strap Wrench - Order SP6331

Double band of stainless steel, heavy-duty steel construction, plastic handle. Ideal for hard-to-get-at filter locations.

Heavy Duty Oil Filter Strap Wrench - Order SP3443

The universal heavy duty design of this wrench permits use on filters up to 6 inches for most automobiles, tractors and heavy trucks. Its non-slipping nylon strap holds fast. 1/2" sq. socket drive lets you clear obstructions near filter.

FRAM® LIMITED WARRANTY

FRAM® fi lter products manufactured or sold by FRAM Group Operations LLC are warranted to their original purchaser to be free from defects in material and workmanship for the duration of the original equipment recommended change interval and **FRAM®** hard parts (fi lters and hard parts are collectively referred to as, “Products”) are warranted to their original purchaser to be free from defects in material and workmanship for one (1) year from the later of the date of purchase or the date of installation. This warranty covers properly installed or utilized Products, installed in vehicles as cataloged by the then applicable **FRAM®** product catalog (“Covered Products”). This warranty does not cover any Product that: a) has been subject to misuse, neglect, negligence, accident or casualty; b) has been improperly installed; c) has been installed into an engine which is not referenced as a conforming application by the then applicable **FRAM®** catalog; or d) has remained in service beyond the original equipment recommended change interval.

Any Covered Product which is determined by FRAM Group Operations LLC to be defective will be replaced at no charge. In the event of an engine or equipment failure directly caused by a Covered Product, FRAM Group Operations LLC will provide the lesser of the: i) restoration of the engine or equipment to a condition equivalent to that existing just prior to the failure or ii) cash payment of the fair market value of the vehicle. **TO THE FULLEST EXTENT ALLOWED UNDER APPLICABLE LAW, FRAM GROUP OPERATIONS LLC DISCLAIMS ALL IMPLIED WARRANTIES AND CONDITIONS AND ANY AND ALL CONSEQUENTIAL, INCIDENTAL AND SPECIAL DAMAGES.** Some jurisdictions do not permit the exclusion of such warranties or damages, so this disclaimer may not apply to you.

You must cooperate with FRAM Group Operation LLC’s claims management process. Please submit claims to FRAM Group Operations LLC after discovery of damage. FRAM Group Operations LLC reserves the right to examine the engine, equipment and filter to determine the amount of damage and whether such damage was caused by a defective Covered Product. Therefore, claimants must take steps necessary to preserve the engine and/or equipment and the filter during the claims investigation period.

This warranty gives you specific legal rights. You may have other rights which vary from jurisdiction to jurisdiction.

VEHICLE MANUFACTURERS’ WARRANTIES

In the United States: Use of **FRAM®** products will not void your Original Equipment warranty. A manufacturer may not require the use of any brand of filter unless either the manufacturer provides the filter for free-of-charge under terms of the warranty or the manufacturer successfully demonstrates to the Federal Trade Commission that its product will not work properly without a specified item or service. To date, the FTC has not made any such determination for filtration products. If a manufacturer makes a claim that using a **FRAM®** product will void or has voided your warranty, ask the manufacturer to provide this statement in writing.

Outside of the United States (excluding Canada): **FRAM®** processes warranty claims on a world-wide basis. The use of aftermarket parts during applicable warranty periods may impact the manufacturer’s warranty. Check the terms of your Original Equipment warranty which may require the use of a specific brand of filter for a valid warranty claim.

FRAM® LIMITED WARRANTY - CANADA

FRAM® fi lter products manufactured or sold by FRAM Group Operations LLC are warranted to their original purchaser to be free from defects in material and workmanship for the duration of the original equipment recommended change interval and **FRAM**® hard parts (fi lters and hard parts are collectively referred to as, “Products”) are warranted to their original purchaser to be free from defects in material and workmanship for one (1) year from the later of the date of purchase or the date of installation. This warranty covers properly installed or utilized Products, installed in vehicles as cataloged by the then applicable **FRAM**® product catalog (“Covered Products”). This warranty does not cover any Product that: a) has been subject to misuse, neglect, negligence, accident or casualty; b) has been improperly installed; c) has been installed into an engine which is not referenced as a conforming application by the then applicable **FRAM**® catalog; or d) has remained in service beyond the original equipment recommended change interval.

Any Covered Product which is determined by FRAM Group Operations LLC to be defective will be replaced at no charge. In the event of an engine or equipment failure directly caused by a Covered Product, FRAM Group Operations LLC will provide the lesser of the: i) restoration of the engine or equipment to a condition equivalent to that existing just prior to the failure or ii) cash payment of the fair market value of the vehicle. **TO THE FULLEST EXTENT ALLOWED UNDER APPLICABLE LAW, FRAM GROUP OPERATIONS LLC DISCLAIMS ALL IMPLIED WARRANTIES AND CONDITIONS AND ANY AND ALL CONSEQUENTIAL, INCIDENTAL AND SPECIAL DAMAGES.** Some jurisdictions do not permit the exclusion of such warranties or damages, so this disclaimer may not apply to you.

You must cooperate with FRAM Group Operation LLC’s claims management process. Please submit claims to FRAM Group Operations LLC after discovery of damage. FRAM Group Operations LLC reserves the right to examine the engine, equipment and filter to determine the amount of damage and whether such damage was caused by a defective Covered Product. Therefore, claimants must take steps necessary to preserve the engine and/or equipment and the filter during the claims investigation period.

FRAM Filtration has manufactured quality fi lters for over 75 years and processes warranty claims on a world-wide basis.

This warranty gives you specific legal rights. You may have other rights which vary from jurisdiction to jurisdiction.

The use of aftermarket parts during applicable warranty periods may impact the manufacturer’s warranty. Check the terms of your Original Equipment warranty which may require the use of a specific brand of filter for a valid warranty claim.

If you own a car, you should know this: It's The Law.

Using FRAM filters or other quality brand name filters does not void vehicle warranty.

Some automobile dealer service representatives falsely claim brand name filters “void the vehicle warranty” if used instead of vehicle manufacturer brand filters during the warranty period.

That claim is not true. Under the Magnuson-Moss Warranty Improvement Act, a vehicle manufacturer may not make its vehicle warranty conditional on the use of any brand of filter unless the manufacturer provides the filter free of charge or the Federal Trade Commission (FTC) has specifically published that only the vehicle manufacturer’s product is needed. To challenge a false claim, ask the person to put it in writing or request the vehicle manufacturer filter free of charge. If you are charged for the filter, or they refuse to give you a written statement, there may be a violation of Federal law.

Standard vs. Metric

Vehicle manufacturers such as Chrysler, Mitsubishi, and Renault have applications listed in this catalog that utilize either a **METRIC** 20mm or a **STANDARD** 3/4-16 threaded filter mounting adapter (the threaded spud that holds the filter onto the engine).

It is very important that the oil filter adapter size be verified prior to the selection and installation of a replacement oil filter. Use of a METRIC threaded filter on the STANDARD threaded mounting adapter will result in loss of oil and possible engine damage.

To ensure that you select the correct replacement filter you must first determine the correct threaded adapter for your vehicle. Provided that you have a high-quality 3/4 inch open-end wrench with an accurate 3/4 inch opening, follow these simple steps:

1. Drain oil and remove the existing filter.
2. Using a high quality 3/4 inch open-end wrench try to slip the open end of the wrench over the adapter threads.
3. If the 3/4" wrench fits around the threads your vehicle is equipped with the **STANDARD** 3/4-16 filter adapter.
4. If the 3/4" wrench does not fit over the threads your vehicle is equipped with a **METRIC** 20mm filter adapter.

The final responsibility of the oil filter selection and installation rests with the installer. If you are still unsure of the correct replacement filter for your vehicle consult your local dealer.

Over-Pressurized Lube Oil Filters

Over-pressurized oil filters: the causes, the solutions.

The oil pressure drops, The red “CHECK ENGINE” light flicks on or the oil gauge drops to zero. You stop your car and check under the hood: your oil filter looks like it has burst. Understandably, you think the filter has failed. You send it back to the manufacturer. He denies any responsibility. You’re upset, of course. If the filter didn’t fail, what did happen?

Lube oil system problems are usually invisible. After they occur, a burst or deformed oil filter is often the only “evidence” you have. Yet it’s misleading. Just as a blown fuse is not the cause of an electrical failure, a burst oil filter isn’t the cause of excessive system pressure. Rather, it is the result of a faulty regulating valve located in the engine.

Fig. 1

How your lube system works.

Figure 1 is a simplified diagram of the lube oil system showing the oil pump, regulating valve, and bearings. To properly separate the engine parts and prevent excessive wear, the oil must be under pressure. The pump supplies oil at volumes and pressures greater than what the system requires to lubricate the bearings and other moving parts. The regulating valve opens to allow excessive volume and pressure to be diverted back to the oil pan without causing damage to the filter or engine.

On most automobiles, the regulating valve maintains an oil system pressure of 40 to 60 psi.

What causes over-pressurization?

Excessive engine pressure is the result of a faulty oil pressure regulating valve. There are two ways that the valve fails to operate correctly: either it sticks in the closed position, or it is slow to move to the open position after the engine has started.

Unfortunately, a stuck valve can free itself after filter failure, leaving no evidence of any malfunction.

Fig. 2

Figure 2 shows the system operating with the regulating valve stuck in the closed position. Pressure builds up equally on all components. If the regulating valve remains stuck, the pressure will increase dramatically. **Normal pressure plus 100 psi causes filter deformation.** If the regulating valve still remains stuck, the gasket between the filter and the base can blow out, or the filter seam will open. The system will then lose all its oil and pose significant risk to the engine. If you continue to run the engine without oil, considerable damage will occur.

How to minimize the risk of an over-pressurized system.

1. Change the oil and filter often, according to the engine manufacturer’s instructions for frequency, viscosity, and type.
2. Warm the engine on cold mornings before starting to drive to allow oil to flow properly.

Three Vital Oil System Valves

In any automotive engine lubrication system there must be a constant flow of oil under pressure to the engine. If that flow fails, the bearings may burn out due to oil starvation, and other moving engine parts may rub together, causing excessive wear.

often mistaken for one another when questions regarding oil systems are raised. This section defines each valve and its specific function. You will find additional information on these valves elsewhere in the general information section of this catalog.

Three separate valves in engine lubrication systems keep the engine supplied with the oil it needs. These valves are

Oil Pump Pressure Regulating Valve

This valve is usually built into the oil pump and is necessary in both full flow and by-pass oil systems. Its function is to control the operating pressure of the lubrication system. The regulating valve is set by the manufacturer to maintain the correct pressure (usually between 40 and 60 PSI).

The valve utilizes a ball (or plunger) and spring mechanism. When the operating pressure is below the preset PSI level, the spring holds the ball in the closed position so that oil flows to the bearings under pressure. When the desired amount of pressure is reached, the valve opens enough to maintain this

Pressure Regulating Valve in Open Position

Pressure Regulating Valve Stuck in Closed Position

pressure. Once the valve is open, the pressure remains fairly constant, with only small changes as the engine speed varies.

If the oil pressure regulating valve becomes stuck in the closed position or slow to move to the open position after the engine has started, the pressure in the system will exceed the regulating valve setting. This may cause an over-pressurized oil filter. If a deformed oil filter is observed, the oil pressure regulating valve must be serviced immediately. (Also see section on over-pressurized lube oil filters in this catalog.)

Relief (By-pass) Valve

In a full oil flow system, *all* the oil passes through the filter to reach the engine. If the filter clogs, an alternative route to the engine must be provided for the oil, or the bearings and other internal parts may fail, due to oil starvation.

A relief, or by-pass, valve is used to allow unfiltered oil to lubricate the engine. Unfiltered oil is far better than no oil at all.

This relief valve is built into the engine block in some cars. Otherwise, the

relief valve is a component of the oil filter itself. Under normal conditions, the valve remains closed. When there is sufficient contaminant in the oil filter to reach a preset level of restriction to oil flow (around 8 PSI in most passenger cars), pressure on the relief valve causes it to open. This condition can occur when the oil filter has become clogged or when the weather is cold and the oil is thick and flows slowly.

Anti-drain Valve

Some oil filter mountings may allow oil to drain out of the filter when the engine is stopped. When the engine is next started, oil must refill the filter before full oil pressure reaches the engine. The anti-drain valve, included in the filter when required, prevents oil from draining out of the filter.

Some filter designs incorporate a combination anti-drain and relief valve with an integrated unit construction.

Oil Pressure Warning Light Problems

Most present day cars use a warning light mounted on the instrument panel to provide the driver with a visual signal of low oil pressure. Low oil pressure is **serious**, since oil under pressure is necessary to properly separate the highly loaded parts of the engine and prevent excessive wear.

The warning light is wired in series with an oil pressure switch as shown in Figure 1. The pressure switch contains electrical contacts which are in the closed position when the oil pressure is below 5 PSI.

When the engine is not running and the ignition switch is turned on, the warning light comes on. When the engine is started, oil pressure will compress the diaphragm in the pressure switch, opening the contacts and causing the light to go out.

If the warning light remains on for more than one or two seconds after the engine has been started, **shut it down immediately**. Then the oil level should be checked and brought up to normal. If the warning light remains on when the oil level is normal, there are a number of possible problems:

1. The pressure switch could be faulty.
2. The wiring between the pressure switch and the warning light could be grounded.
3. The pump could have lost its prime due to either a faulty pump or a clogged suction strainer.
4. A faulty pressure regulating valve could be dumping all the oil back into the crankcase.

Figure 1

On some engines the filter is mounted in a position which allows the oil in the filter to drain back to the crankcase when the engine is stopped. This would be the case for the filter mounting shown in Figure 2 where the filter is horizontal and is above the level of the oil in the crankcase. Since a filter holds up to a quart of oil, it takes about 5 seconds for the pump to fill the filter after the engine has been started during which time the warning light will remain on.

To prevent the engine from operating without oil pressure for this period of time after startup, the filters designed for these special mounting positions contain an anti-drain back valve. This valve is usually in the form of a rubber gasket which allows the free flow of oil through the filter in the normal direction, but when the engine is shut down it prevents the oil in the filter from draining back to the crankcase. If the warning light remains on for longer periods after the filter has been on the car for some time, replacing the filter is recommended.

Under some conditions the warning light may flicker when the engine is running. This usually happens when the car is going around a corner or is on a relatively steep hill. If flickering occurs under these conditions, it is because the oil level is low and the pump strainer is no longer fully submerged in the oil. The oil level should be immediately brought up to normal.

In summary, the oil pressure warning light provides vital information to the driver. If the light remains on or even flickers when the engine is running, it should be shut off immediately and the cause investigated.

Figure 2

Diagnosing Filters with Collapsed Center Tubes or Elements

When a collapsed filter element is discovered, the natural tendency is to assume something is wrong with the filter itself (Figure 1). Generally, this is not the case, but is usually a symptom of problems elsewhere in the engine.

Automotive engines incorporate a by-pass valve across the inlet and outlet of the full flow filter, which serves to by-pass oil around the filter if its restriction becomes excessive (Figure 2). The by-pass flow circuit insures oil

flow to the engine when there is a significant restriction across the filter due to loading or cold start conditions. Typically, engine manufacturers design by-pass valves to open at a filter differential pressure of 10 psi (70 K Pa), with some opening as high as 30 psi (206k Pa). Some engines have the by-pass valve mounted in the engine block, while others locate the by-pass valve in the filter.

Figure 1

Figure 2 – Normal Pressure

Automotive lube oil filters are designed to withstand differential pressures significantly greater than those experienced under normal operating conditions without collapsing. Therefore, when an element has collapsed, it is usually the result of a “sticky” or otherwise malfunctioning by-pass valve.

In some instances, a “sticky” filter by-pass valve alone is not enough to collapse a filter. The oil pressure regulating valve may also stick, resulting in increased pressure and flow through the filter. Although this condition may be only momentary, it can quickly collapse the filter center tube if the by-pass valve fails to relieve the pressure.

A collapsed filter can lead to a loss of filtration and oil flow to the engine; there is the possibility that interior parts of the filter or filtering material may be torn away and move into the fluid system and interfere with the oil flow.

The malfunction of the by-pass and oil pressure regulating valves and the subsequent collapse of the filter may not cause noticeable damage but at times it can result in a catastrophic failure to the engine; seizure of a piston or of rod or main crankshaft bearings.

The malfunction of by-pass valves and regulating valves has been traced to:

- Sticky surfaces caused by cold, highly viscous oil;
- Oil contaminated by excessive condensation, coolant, or oxidation;
- Neglect – extended oil drain and filter change intervals;
- Carbon grit that temporarily jams a valve;
- Sudden acceleration of the engine with any of the above conditions.

Discovery of a collapsed filter calls for inspection of the filter by-pass valve and the pressure regulator valve and a review of the engine and its performance and maintenance history.

Spin-On Filter Applications

Spin-on filters are still the most popular design for liquid filtration on internal combustion engines. The spin-on design offers an efficient, quick and clean method for servicing liquid filters. The spin-on is by far the preferred method of filter design on automobile and mobile heavy duty equipment.

Over the years, a proliferation of filter sizes has evolved. These include length, diameter, sealing gasket diameter and thread size variation. The internal design of spin-on filters also varies. Some designs utilize internal by-pass valves and/or anti-drain back valves. Filtration media used in different models also vary depending on different service and engine requirements. Operating pressure requirements can also differ from model to model.

With all the different spin-on filter models available in the market today, the user must use extreme caution not to use a wrong filter for his/her particular application. There are filters that look alike and may even fit different engine mounting bases with the same thread size. However, this does not constitute and guarantee that the correct filter is being used. Mis-application problems could be very serious. Wrong thread size is one of the common mistakes. Failure to use the recommended filter with the correct thread size could result in improper mating of filter to mounting base. A loose thread fit may cause a leak, back-off, fatigue failure or loss of filter. Any of these cases can cause engine damage or fire. A "tight" thread fit can cause leakage, thread seizure or cross threading, resulting in damage to the engine mounting base and filter. A multitude of thread sizes are used in spin-on filters.

Both metric and United National threads are widely used. Some of the metric and United National threads are close in size to the U.S. threads and a spin-on filter may "fit" a mounting base and yet have a different thread than the base. The Society of Automotive Engineers (SAE) has published a Recommended Practice that identifies dimensional characteristics and mounting configurations of filter base mountings. This Recommended Practice, SAE J-363 lists the thread sizes of the more commonly used spin-on filters and their recommended application.

Other considerations of mis-application include getting the wrong combination of by-pass settings, anti-drain back valves, filterability characteristics, operating pressure, sealing gasket diameter, interference and by-pass valve elimination. Failure to use the filter recommended by the filter manufacturer could interfere with proper engine protection.

Filter design and application is a complex process requiring the proper order of components. Don't take the chance of altering this order which could result in equipment damage or hazardous operation. The key to eliminating these problems is application. Be sure that the source of recommended application is a correct one. Filter manufacturers' catalog application recommendations should be followed.

When it comes to choosing the correct filter, one can't rely on cross-reference, "fit" or "feel". Be sure that the spin-on filter application is correct.

Cartridge Filter Applications

Changing oil filter technology has brought on new installation techniques. When changing cartridge oil filters, it's important to keep up-to-date with the latest procedures for these not-so-standard filters. The process takes longer than the average oil change. But failure to follow proper procedures can cause engine damage, so take note of these tips.

Not all cars are created equal. So it's important to be aware of specific procedures for different makes and models of cars. Here's one example of a procedure you should be aware of.

The GM Cobalt

A general rule of thumb when changing cartridge oil filters is to reverse the procedure that you might normally follow. And it's no different on GM vehicles equipped with the Ecotec engine. Change the filter first, then drain the oil. This allows

the dirty oil in the filter housing to drain down to the oil pan. The housing does not empty until the filter is pulled up out of the housing.

Another tip when changing this filter is to use the correct socket size. If a standard 32 mm socket is used when removing the oil canister, it could damage the intake manifold when removing the cap because of its height. Use a low-profile socket to steer clear of the plastic manifold.

As a last note, for all makes and models of cars, always check manufacturer specifications for oil viscosity and amount of motor oil to avoid costly mistakes.

Loss of Oil Pump Prime

Immediately after an oil change one of the most confusing issues to face the typical do-it-yourselfer or professional mechanic is failure to get oil pressure back into the operating range.

Although not a common occurrence, it is very possible that the oil pump may lose its prime during the oil change.

When the used motor oil is drained from the engine the oil may also drain from the oil pump pickup tube and possibly from the oil pump itself. When new motor oil is installed the pump's pickup tube inlet again becomes submerged trapping air in the tube on the suction side of the oil pump. The trapped air will cause cavitation of the pump and prevent it from producing oil flow and subsequent oil pressure.

Many installers tend to blame this on the oil filter and assume that the filter is blocking the flow of oil. Since the filter is now suspect the installer will install a second filter. Sometimes this solves the problem because the trapped air was released when the first filter was removed. Of course, the installer's suspicion that the oil filter was at fault has increased.

The point being made is the oil filter was not the problem and in most

cases there is a simple solution.

If after the oil and filter change, the red light or low oil pressure remains for ten seconds, shut the engine off, remove the oil filter and, using an oil squirt can with 30 weight motor oil, squirt oil several times into the oil filter base outlet on the engine. (This will be the opening beside the threaded stud; it will not do any good to squirt oil into the threaded stud.) Next, fill the filter with new motor oil and reinstall. Start the engine and check for oil pressure. In most cases the problem will be solved. DO NOT allow the engine to run for more than ten seconds without oil pressure. Use a watch to time the ten seconds and be sure of the elapsed time. In some instances the full ten seconds is needed for the pump to recover oil flow.

If this fails, again remove the filter and crank the engine until oil spills from the engine base. DO NOT crank over ten seconds at a time. When oil spills, reinstall the oil filter, correct the oil level and restart the engine. Oil pressure should now be back to normal.

Note: Sometimes this problem can be avoided by limiting the time the oil is drained.

FRAM Group's product warranties are limited to those set forth in its various warranty statements appearing on or included in the packaging of its products.

While the design, length, or appearance of replacement filters and spark plugs may vary from the original equipment parts being replaced, under no circumstances should replacement parts be used when they do not appear to fit properly. Do not force to fit or modify the part to fit in any way, but instead confirm that you are using the correct replacement part. FRAM Group specifically disclaims all liability and responsibility for any harm, including direct, incidental, or consequential damages, resulting from any improper installation, modification, or other misapplication of its filters or spark plugs.

Product applications in this publication are limited to vehicles manufactured for sale in the United States, Canada, or Mexico and distributed through authorized dealer networks. If a vehicle has been manufactured or altered to other than United States, Canadian, or Mexican specifications, the product applications may not apply. FRAM Group does not accept or assume any liability for applications of its products on any vehicle imported into the United States, Canada or Mexico through channels other than the authorized dealer networks or for any vehicle not in compliance with all applicable North American laws and regulations.

Notice: If FRAM Group spark plugs or filters are used for racing, in modified engines, or in aircraft, these products are not covered by any warranties. FRAM Group MAKES NO WARRANTIES, EXPRESS OR IMPLIED, FOR ITS SPARK PLUGS OR FILTERS, AND SPECIFICALLY DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IF ITS SPARK PLUGS OR FILTERS ARE USED FOR RACING, IN MODIFIED ENGINES OR IN AIRCRAFT. Under no circumstance is FRAM Group responsible for direct, incidental, or consequential damages resulting from such uses of its products. This catalog should not be used or referenced for any replacement part application for engines that are installed in aircraft or modified or used for automobile or marine racing.
