Ditch Mold Cut

2.1

Measure and mark the dimensions shown in the diagram.

Remove the two ditch moldings from the vehicle. Take care when removing them as they are made from metal and can bend easily.

Cut the ditch moldings on the marks you made.

Ditch Mold Drill

2.2

Measure and mark the hole positions shown in the diagram (4 per side). The positions must be centered in the ditch.

Before drilling the holes in the roof, take your 8.5 mm drill bit and wrap a band of insulation tape around the drill bit to act as a stopper to prevent you from drilling too deep as there are airbags located below where you will be drilling.

There is no need for a lot of downward pressure. Let the drill do the work.

2.3

Before placing a spacers (Item 5), apply a bead of silicon around each of the holes you have drilled.

Secure the Foot Rails to the vehicle using M8 x 40 Hex Bolts, M8 x 16 x 1.6SS, M8 x 19 x 2SS Flat Washers and M8 Nyloc Nuts. (Items 3, 4, 6 & 7) as shown.

3.1

Make sure that the wind deflector is installed before you proceed to the next step.

3.2

Fit your Roof Rack to the Foot Rails using M8 x 20 Hex Bolts, M8 x 16 x 1.6SS Flat Washers and M8 Nyloc Nuts (Items 6, 7 & 8).

3.3

Center the rack and tighten fully. Use M8 nut caps (Item 2) to finish off the nuts.
