

PRODUCT QUESTIONS

How high is the top of the rack from the top of the 4Runner?

The 4Runner (5th Gen) 3/4 Slimline II Roof Rack will add 5" (127mm) of height overall.

Will this fit 2018 4runner?

Yes, this will fit the 2018 4Runner perfectly!

I have a 2016 4 runner Trail Premium with factory mounted roof rails. Is the 5th Gen Slimline designed to use the existing roof rack holes? Do you have any recommended full or 3/4 size racks that use existing factory rails?

Our 3/4 rack uses all existing factory mounting points with no drilling required. The full size rack will require drilling for the very front mounting points only. Both options are incredibly popular and are installed routinely.

Does the rack interfere with the sunroof?

You will be absolutely fine. It does not interfere with the sunroof tilt at all.

Will I be able to purchase an extension to make into a full size roof rack for a 2016 Toyota 4runner?

The 3/4 rack is set for the 3/4 size but it can be done by adding 3 slats, replacing the side profiles, and getting the full length foot rails. You'll have to give us a call to get the parts.

What is the torque recommendation for the bolts attaching the side rails to the roof and the bolts attaching the rack to the side rails?

We recommend 20Nm or 15ftlbs.

I'm wondering how much space there is on the half rack system if a RTT is mounted. Would it be worth going to the full rack if storage is needed up top with a RTT.

Our Roof Top Tent (TENT031) will take up 7 of the 8 Slats on the 4runner 5th Gen 3/4 Rack (KRTF050T). If you would like to have storage room on the rack as well we suggest going with the Full Length 4runner Rack (KRTF054T).

Will an Eezi-Awn Batwing Awning fit on this rack with your roof top tent as well? Any concerns with big awning mounted to the smaller rack?

This Rack (KRTF050T) is 61.51 inches long and we do not recommend using awnings much longer than the Rack. That being said the Batwing is possible with a Roof TopTent. If you have any more questions please feel free to give us a call.

Is the 660lb load limit for dynamic or static load?

The 660lbs is the static rating for the rack itself, You will have to contact the manufacture for the weight rating the vehicle can bear. As for the dynamic rating there is no exact number as it is hard to judge.

Can a longer roof rack bed be installed on the 2015 4runner?

At the moment the KRTF050T 3/4 rack is all we have available, That being said we are in the prototype/ beginning production phase for the 5th gen 4runner full rack that hopefully will be in production in the next couple of months.

Will this rack fit the FrontRunner featherlite tent without overhang? Do you know if it can fit a small Maggiolina?

Mike, Yes, Our tent is 48" wide (when mounted to open over the driver or passenger side of the vehicle) and our 4Runner rack is 49.5" wide, We do not know of any Maggiolina tents that will fit on this rack. Typically they are longer than the rack on the vehicle.

Does rack interfere with satellite radio reception?

No, we have not heard of any issues of our rack system interfering with satellite radio.

How come other manufacturers have full length racks for the 5th gen toyota 4runner?

Other full size roof rack solutions for the 5th gen 4runner have feet or tracks that only balance on the roof in the forward position. Because there is nothing on the vehicle stabilizing these racks from upward g-forces, this approach is

not a serious expedition grade solution. Vibrations from corrugated roads (for example) will eventually cause these racks to fail likely causing damage to the roof itself.

How much weight will this rack support?

The rack is rated to 660 lbs, but in order to know how much weight the roof itself can handle, you would need to check with Toyota for the manufacturers specifications.

Can the under rack storage slide (Product Code: TBRA013) be used with this rack?

Yes, the table slides will work great with this rack, but must be mounted sideways. You cannot load a table from the rear.
