Electronic Control Units

FIC Number Range: 1_ _ _ _ _

Function: Operates as a central processing unit. Reacts to input from various sensors and calculates engine control parameters accordingly. These include fuel delivery and timing.

Process:

1. Cases and cans are removed from electronics to enable complete and accurate visual inspection.
2. All visible damage to boards and components is repaired or replaced.
3. Unit is connected to in house Simulator.
4. Simulator then runs ECU through all phases of operation. Any operation that fails to meet OEM specifications is repaired.
5. Once the ECU meets all OEM specifications the unit is reassembled, sealed and packaged.

Fuel Injectors

FIC Number Range: 38_ _ _ _ _

Function: A solenoid valve that works in conjunction with the Control Unit. The injector receives a signal from the control unit and delivers the precise measured amount of fuel directly to the intake port.

Process:

1. All fuel hose, external seals, filter, pintle cap, etc. are removed.
2. Special cleaning process for exterior of injector.
3. Injector is flushed and backflushed to remove debris.
3. Injector is then ran in a closed loop environment.
4. The injector is checked for:
 - a.) Coil resistance
 - b.) Spray pattern
 - c.) Fuel delivery
 - d.) Leak test
5. Once the injector meets all OEM specifications, the filter, pintle cap, all external seals, hose and hose ferrules are replaced.

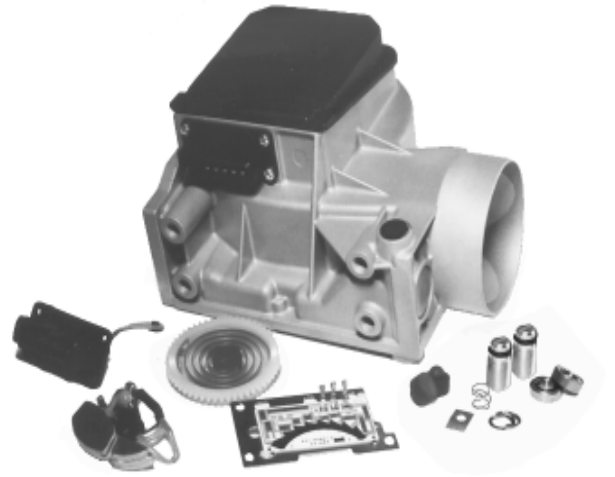

Air Flow Meters

FIC Number Range: 41_ _ _ _

Function: Works in conjunction with the ECU and the injectors. The Air Flow Meter measures the volume of air going into the engine and sends a corresponding signal to the ECU. The ECU then calculates the appropriate injection duration and sends it to the injector. Some AFM's incorporate a temperature sensor.

Process:

1. AFM's are stripped to the component level.
2. All parts, mechanical and electrical are tested to meet OEM specifications.
3. Unit is assembled using known good parts.
4. Simulator then runs AFM through all phases of operation.
5. Spring tension, wiper position and CO screw are calibrated to OEM specification.
6. Once the AFM meets all OEM specifications the unit is sealed and packaged.

Air Mass Meters

FIC Number Range: 42_ _ _ _ , 43_ _ _ _ , 48_ _ _ _ , 49_ _ _ _

Function: Works in conjunction with the ECU and injectors. The AMM provides the ECU with a signal representing the engine load. The ECU and injectors then adjust the fuel/air mixture ratio. The AMM adjusts to changes in the air mass, air temperature and altitude automatically.

Process:

1. All AMM's are stripped to the component level.
2. All parts, mechanical and electrical are tested to meet OEM specification.
3. Unit is assembled using known good parts.
4. Simulator then runs AMM through all phases of operation.
5. The AMM is then calibrated to OEM specifications.
6. Once the unit meets the OEM specifications the unit is sealed and packaged.

Warm Up Regulators

FIC Number Range: 51_ _ _ _

Function: The Warm up regulator utilizes engine temperature and an electronic signal to adjust the fuel enrichment during warm up. The WUR varies the fuel pressure on top of the control plunger in the Fuel Distributor accordingly.

Process:

1. WUR's are stripped to the component level.
2. All parts, mechanical and electrical are tested to meet OEM specifications.
3. Unit is assembled using known good parts.
4. Simulator then runs WUR through all phases of operation.
5. The WUR is then set to OEM specifications for "Warm" and "Cold" operation.
6. Once the WUR meets all OEM specifications the unit is sealed and packaged.

Fuel Distributors

FIC Number Range: 81_ _ _ _

Function: The Fuel distributor measures and delivers fuel to each individual injector. The FD mounts on an Air Horn which measures the amount of air going into the engine. As a flap in the Air Horn rises or lowers the amount of fuel delivered is adjusted accordingly.

Process:

1. All FD's are stripped to the component level.
2. All parts, mechanical and electrical are tested to meet OEM specification.
3. Unit is assembled using known good parts.
4. The FD is connected to the calibration apparatus.
5. System pressure is set.
6. The fuel delivery for each port is then set to OEM specifications.
7. Once the unit meets all OEM specifications the unit is sealed and packaged.

Fuel Pumps

FIC Number Range: 71_ _ _ _ - 78_ _ _ _

Function: A vital part of the fuel injection system, Fuel Pumps draw fuel from the tank and deliver it to system components. (ie: Warm-Up-Regulators, Fuel Distributors and Injectors.)

Reconditioned Process:

1. Visual inspection for defects. Units deemed defective are disassembled.
2. Units are tested for amperage draw under running and loaded conditions.
3. Units are tested for flow rate and pressure checked for seal integrity.

Remanufacturing Process:

1. Units are disassembled to component level.
2. Bearings are cleaned or replaced.
3. Commutators are resurfaced or replaced.
4. New brushes installed.
5. All 'O' rings are replaced.
6. Assembled units are flow rate, pressure checked and tested for amperage draw.
