Unmatched Design And Quality

Each Fumoto valve is designed and **manufactured in Japan** to exacting specifications by our factory with an 80 year pedigree supplying high performance valves to the pressurized gas industry. Each valve is constructed of forged brass and stainless steel and thoroughly tested before shipping from the factory. All Fumoto Engine Oil Drains are covered by a **lifetime warranty**.

Valve Types

Standard - Non Nipple

Available in sizes to fit virtually all vehicles, the standard Oil Engine Drain is the valve that started it all for Fumoto. Constructed of forged brass and stainless steel to exacting Japanese specifications, the standard Fumoto Valve is designed to provide a lifetime of dependable and reliable service.

Short Nipple - S Series

Incorporating Fumoto's most compact ball valve, Fumoto's S series valves are designed to fit cars, light trucks, vans, and select commercial engines. The S series offers a short 5mm nipple which allows you to attach a hose for convenient draining. S series are designed especially for general automotive users concerned about low ground clearance. Constructed of forged brass and stainless steel to exacting Japanese specifications, S series valves are designed to provide a lifetime of dependable and reliable service. To use the S valve, simply attach a hose to the nipple or optional plastic socket and snap it onto the valve nipple.

Standard Nipple - N Series

Fumoto's N series Oil Drain Valves are specifically designed for cars, trucks, heavy duty construction equipment, and industrial engines. Ideal for fleet maintenance, N series valves are designed with an integrated nipple for attaching a drainage hose, making scheduled oil changes easier, faster, and cleaner. Constructed of forged brass and stainless steel to exacting Japanese specifications, N series valves are designed to a lifetime of dependable and reliable service.

L-Nipple

Fumoto's L series valves are specifically designed for heavy duty trucks, construction equipment, and industrial engines. The L series valve's removable 90° brass elbow joint nipple allows for easier oil changes in hard to reach and awkward locations. The adjustable brass collar allows 360° positioning of the nipple. And like all Fumoto valves the L series enables mechanics and end users to sample oil cleanly and easily even with the engine running. Constructed of forged brass and stainless steel to exacting Japanese specifications, L series valve are designed to provide a lifetime of dependable and reliable service.

Adapters

In addition to valves Fumoto offers a wide selection of **adapters** to fit the Engine Oil Drain into recessed drain port locations or when obstructions prevent fully tightening the valve.

Fumoto Lever Clip

Fumoto's new lever clips are designed to keep the Engine Oil Drain Valve operating lever in the closed position for extra safety and security.
