BRIGHT, LOW CURRENT REPLACEMENT LED HEADLIGHT KITS

6000
LUMENS

LED LIGHTING

PRODUCT OVERVIEW

Heise LED Replacement Headlights are designed to replace weaker, factory bulbs with brighter, low current consuming LED bulbs. These headlight kits are extremely bright, providing the additional light needed on dark nights. Each kit has a pair of 25 watt LED bulbs. The voltage and current monitoring circuits are inside the compact radial heatsink housing and protected from the elements. Installation is easy, even in tight locations! Heise Headlight Kits come in 20 different model sizes to fit an array of headlight applications, and are the perfect upgrade for drivers wanting more out of their headlights. 16 models include 3000K and 8000K films to change the light bulb color. 14 models now offer the ability to rotate the bulb to adjust the beam pattern for the vehicle. 16 models now offer an IP67 rating.

FEATURES

- 6000 Lumens
- 25 watts per bulb
- 6500k
- Many Headlights are IP67
- Ability to change light bulb colors on most models with included films
