WHEREVER TIRES ARE CHANGED™

# 35440 — BLUE COBRA™ TRUCK TIRE DEMOUNT TOOL

## An Affordable Alternative!

*Demounts truck  
tires in seconds!*

- Fast and easy, the Blue Cobra truck tire demounting tool is strong but economical and offers a golden value for tire changing
- Quickly demount nearly any 20", 22.5" and 24.5" tube-type and tubeless truck tires, up to a 13" wide wheel
- Ergonomic shaped steel handle with no-slip grip for optimum leverage while reducing back injuries
- Solid steel Cobra head is press-fit into the steel handle—no fasteners to loosen or fall out
- Allows demounting of the tire without lifting the entire wheel and tire off the ground—reduces back injuries
- Made of durable high-quality steel—won't prematurely wear out like tools made of brass or bronze
- Aluminum bead support to grab the top bead of Super Single and Super Wide tires
- 2 heavy-duty nylon rollers are easily replaced when worn, kit #35441 includes two rollers and two roll pins
- When used with Ken-Tool's patented leather wheel protector #31810, it won't scratch painted, aluminum and alloy wheels like competitive tools tend to do. Included!
- 54" long, 22-lbs; boxed and UPS shippable

Part No: 35440

Part No.: 31810  
Leather Rim Protector

## Introducing “Blue Cobra™” Truck Tire Demount Tool

*One tool demounts truck tires affordably, efficiently*

**AKRON, Ohio** (May 21, 2010) – Ken-Tool, the world’s leading manufacturer of professional tire service tools, has unveiled a new tool specifically designed to address the challenges of demounting truck tires affordably and efficiently – in the shop or on roadside service calls.

The Ken-Tool “Blue Cobra™” Truck Tire Demount Tool (pn 35440) is ergonomically designed to allow a technician to quickly remove the tire from the rim on the floor with a single tool. The “Blue Cobra” tool is designed to service 20-, 22.5- and 24.5-inch rims mounted with tube or tubeless style wheels up to 13-inches wide.

The “Blue Cobra” tool’s secret is found in its unique head made from premium grade steel, and equipped with two heavy-duty, industrial nylon rollers which protect the rim and provide rolling fulcrum points to reduce user fatigue. The head is press fit into the ergonomic shaped handle, fabricated from heavy gauge steel tubing and equipped with a non-slip handle grip. Since the “Blue Cobra” tool is made from steel, it will provide longer service life compared to non-ferrous tools made of brass or bronze.

When servicing the new generation of “wide” tires, a forged aluminum bead support above the head grabs the top bead when lifting the bottom bead off the rim, improving the technician’s efficiency. The ergonomically designed “Blue Cobra” tool reduces service technician back strain and reduces the time needed to demount the tire.

The “Blue Cobra” tool demounts tires in three easy motions and greatly reduces back strain, without the need to lift the tire and wheel assembly to demount the bottom bead. A tire can be demounted in seconds and the tool is easy to learn how to use.

While the Blue Cobra is not likely to damage steel or alloy wheels, Ken-Tool includes the patented leather wheel protector (pn 31810) with each tool so that technicians can show their customers that every step is being taken to protect their wheel investment. Ken-Tool also offers a service kit to replace worn rollers (pn 35441) with two nylon rollers and roll pins.
