

### **Subwoofer Not Required**

Designed to play more low frequencies than the other guys so you get great bass even without a dedicated subwoofer.

### **Shallow Mounting Depth**

Greater install possibilities. Many models to choose from with depths as shallow as 1.5".

### **MTX Reliability**

Forty years of experience and skill in this classic speaker design.

## **Deep Bass**

The Thunder Coaxials offer unbeatable performance for the price in their class. They provide outstanding low frequency reproduction, easy installation, and are great as factory replacements with or without an additional amplifier.

While no car speaker can produce bass like a subwoofer, these speakers truly shine in the lower frequencies. The THUNDER Series Coaxial offers it all. You will have incredibly clear response with the built-in tweeter, and plenty of Low THUNDER response from this speaker's Polypropylene cone. The rubber surround will shrug off the weather and wear that come with living in your car full-time.

Ready for an easy-to-install speaker with an awesome price? Then let the "THUNDER ROLL" with the THUNDER Coaxials.

## **Plays Down To 80hz**

THUNDER Series speakers are designed to compliment any installation while delivering a full range sound experience for all types of music to get the most out of your music and hear it as the artist performed it.

The THUNDER46 is a **4" x 6" 2-way coaxial** speaker pair that can handle up to **40-watts RMS power**. THUNDER speakers are set apart from the "other guys" because of its ability to reproduce low frequencies that other speakers cannot reproduce. The THUNDER46 plays all the way down to 80Hz so even in systems that don't have subwoofers, you can get excellent bass response for all kinds of music.

The THUNDER46 uses a polypropylene woofer that is incredibly durable and the speaker's concave cone design assists in delivering exceptional imaging especially when speakers are mounted in the doors of a vehicle. This model includes a high temperature 4Ω voice coil and incorporates Spider Plateau Venting to ensure cool air is targeting the voice coil ensuring reliability over time.
