

AV Input

The AV Input allows you to connect to the video and/or audio output of an external device so you can enjoy your audio and video content through your system.

Built-In Dome Light

The built-in dome light replaces the factory dome light you lose when this unit is installed in the vehicle's roof.

Built-In DVD Player

The built-in DVD player lets you play DVD, CD, MP3, MP4, VCD, JPEG and WMA formatted discs through this system.

ESP

ESP [Electronic skip protection] is a feature that buffers the CD while playing, storing 5 seconds of music. If disc reading is interrupted, the player momentarily uses the stored data, while the tracking circuitry finds the passage prior to the interruption on the CD for continuous performance.

FM Transmitter

Allows you to play the audio from the mobile video system through your vehicle's FM radio.

Headphones Included

This unit includes two Wireless IR (Infrared) Headphones.

IR Transmitter

Built-in IR (Infrared) Transmitter sends the sound from the mobile video system to IR compatible headphones.

SD Memory Card Port

The SD Memory Card port will support a full size SD memory card to 32 GB and can be used for music playback as well as photo and video viewing (on source units equipped with a monitor). Most units support full size SD cards but there are a few that only accept micro SD cards.

Switchable Covers

This Mobile Video system includes three color covers, Black, Tan and Grey, so you can switch the cover to match your vehicles interior.

Wireless Remote Control

A wireless remote control gives you commanding access to the key functions of your unit from the palm of your hand.
