INDICATING ATC FUSE PANEL

Finding the open fuse on a fuse panel is now easier with an indicating fuse panel. LED indicators light up when a fuse blows. A clear, weather resistant hard shell cover protects the fuse panel from moisture, dirt and other contaminants. All fuse panels are rated 32V, up to 25A max per circuit (100 amps max per panel). Temperature Rating: -4°F/-20°C to 80°F/-176°C.

SPLASH PROOF ATC FUSE BLOCK

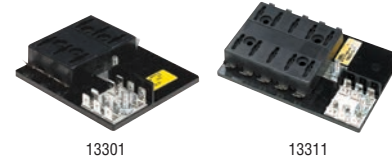

A convenient means of adding fused circuits to power accessories or auxiliary loads. Each pole has its own 1/4" male quick-connect isolated terminals (power is not provided by a common bus). These blocks feature a back plate for additional safety and electrical isolation. The clear cover has an O-ring seal to help keep out contaminants and makes it easy to inspect fuses (fuses not included).

15A per circuit. Operating environment: -40°C to 105°C (-40°F to 221°F), 95% RH non-condensing. Uses two 5.5mm mounting holes for M5 (#10) screws.

- Wire range per circuit: #12 – 16g**
(Wire size dependent on length of run)
- #16 ga. up to 10'
 - #14 ga. up to 20'
 - #12 ga. up to 25'

OIL TO GAS MIXING CONTAINER

Oil mixture container allows the addition of the exact amount of oil required for a 2 cycle engine. Oil level marks are in gallons and litres. Determines ratios for 100:1, 50:1, 24:1 and 10:1 mixes. This wide mouth, quart size bottle can prevent fouled plugs or seized engines that can result from improper oil mixing.

BILGE ABSORBENT

Manufactured from solid sheets of 100% blown polypropylene. It absorbs oil/fuel in the bilge so that remaining water can be pumped overboard. Absorbs 2 quarts of hydrocarbon. The "safety skin", a tough universal fabric skin, absorbs small amounts of water making the bilge absorbent fire resistant without interfering with its oil absorbency. This skin assures that the absorbent material will not get into the bilge and possibly foul moving parts. Great way to avoid fines from pumping oil overboard. Help keep our waterways clean. Convenient tie downs keep booms in place.

ANCHOR RODES

Traditional 3 strand nylon is an excellent economical choice when choosing an anchor rode. Our nylon rope and G4 high-test galvanized chain is hand spliced in the USA to operate smoothly in a windlass. All of our rodes have high test galvanized chain hand spliced to them to operate smoothly in a windlass. Includes bucket and 3/16" shackle.

8 - PLAIT ANCHOR RODES

8 Plait nylon is the ideal choice for anchor rode. Compared to traditional 3 strand nylon, the tensile strength is similar, but the multi-strand woven lay allows the rope to lay more compactly in the anchor locker. As a result, you have more rode available if needed. Our nylon rope and G4 high-test galvanized chain is hand spliced in the USA to operate smoothly in a windlass. In addition, the 8 plait design absorbs higher shock loads better when compared to 3 strand. Includes bucket and 3/16" shackle.

PYRAMID ANCHORS

Pyramid anchors provide excellent holding power and work in tidal waters and rocky or sandy bottoms. They are superior to concrete blocks because the anchor rapidly sets itself by presenting a digging edge to penetrate the bottom. The pyramid shape presents a large surface area which creates high suction that increases the deeper it sets. The short shank allows mooring in shallower waters without chain wrap-up, a characteristic of mushroom anchors. Painted cast iron. **Not available in all locations.**
