Technical information

Consumer's hitch receiver depth?

To ensure proper fit, it's important to know the depth of your receiver.

Determine this by doing the following:

- With a ruler inserted in the receiver, measure from the center of the hitch mounting hole to the point where you make contact with an obstacle. **This is your receiver depth.**
- If you do not contact a back-stop or your hitch receiver does not have a backstop, another potential point of contact could be an undercarriage-mounted spare tire or the undercarriage itself.
- Using the table in the next page, compare your measurement to see which hitch racks will work with your vehicle.

Your receiver depth must be equal to or greater than the product measurement listed in the table for a proper fit.

Technical information

Consumer's hitch bumper clearance?

Make sure your bumper will not interfere with the Thule hitch rack. Measure the distance from the center of the mounting hole on your hitch to the end of your bumper.

This is your bumper clearance.

Your bumper clearance must be equal to or less than the product measurement listed in the table for a proper fit.

Consumer's spare tire clearance?

If you have a spare tire on the back of your vehicle it may interfere with the installation of your Thule hitch rack. Measure the distance from the center of the mounting hole on your hitch receiver to the end of your spare tire.

This is your spare tire clearance.

Your spare tire clearance must be equal to or less than the product measurement listed in the table for a proper fit.
