

Volvo Thermostat Housing Hose Nipple

Part# 8636779K-PRM

OEM Design

The OE thermostat housing on popular Volvo 6 cylinder models has a plastic steam nipple which tends to break during routine maintenance procedures. This item was only supplied by the manufacturer as part of the complete and costly thermostat and housing assembly.

Problems

- Cooling system heat cycling and regular exposure to oil or grease can weaken and embrittle small plastic components
- Removal attempts or accidental impacts can easily break plastic OE nipple

ÜRO Solution

ÜRO Parts engineered a premium aluminum coolant nipple, which replaces only the original plastic nipple and provides a more robust, faster, and much more cost-effective repair.

Advantages

- Aluminum material is impervious to engine heat, oil and ATF
- Replace only the broken component, not the entire thermostat assembly
- Lifetime warranty

Vehicle Applications
